Chunk 1: 2024-04-01 to 2024-04-04

Topic: Copyright, Ownership, and Reuse of AI-Generated Songs

Description

A recurring source of tension was who owns AI-generated songs, whether they can be monetized, and what happens when songs are copied or reused. The discussion includes uncertainty about free vs paid rights, whether transformed or continued songs become commercially usable, and complaints about apparent theft or reposting by others.

The tension is visible because users repeatedly seek legal clarity and because some users report concrete harm. For example, one user asks about copyright and infringement directly: "**where would it be best to post here in the general chat about how Suno AI works and a possible copyright infringement I've come across**" and then says a trending song was "**a actual studio artist song called "listen to your heart"**." Another user later says, "**Someone, copyrighted an suno AI song that I made, re-uploaded it claiming it was his.**" A further escalation appears when a user says: "**Someone downloaded one of my songs, published it under their name, but with the same title, and then they started filing dmca notices on me to take the original down.**"

The discussion also contains disagreements over rights on free vs paid plans. Some users give definitive-sounding answers, but the clearest supported position in the logs is that paid subscribers can monetize songs they generated while subscribed, while free-tier users cannot. This topic evolves from scattered rights questions early in the logs, to practical worries about labeling AI content, to reports of copying and takedowns, and finally to sharper warnings about keeping songs private until distribution.

Timeline

- **2024-04-01 00:11:53 - 00:11:53**
- **2024-04-01 00:27:52 - 00:30:53**
- **2024-04-01 02:30:48 - 02:35:32**
- **2024-04-01 04:13:17 - 04:18:56**
- **2024-04-01 05:29:30 - 05:33:15**
- **2024-04-01 02:32:54 - 02:34:10**
- **2024-04-03 23:17:56 - 23:20:32**
- **2024-04-04 00:56:06 - 01:00:19**
- **2024-04-04 05:04:52 - 05:25:30**
- **2024-04-04 06:13:14 - 06:15:18**

Discussion evolution:
- Early on, users ask practical rights questions about subscriptions and licensing, e.g. "**if one cancels their subscription, do the credits stay**" and "**if you have paid version, you own it. If not, it's public**."
- The topic becomes more explicit when users discuss whether AI content must be tagged on YouTube: "**you need to actually tag AI generated content on youtube now**."
- It sharpens further with reported copyright problems on Suno itself: "**possible copyright infringement**" and "**I think you can report it**."
- By later messages, the issue becomes concrete and adversarial: users report theft, reposting, DMCA notices, and ask whether they should keep songs private: "**I guess it isn't safe to make songs public**."
- Other users then warn to register or protect songs and explain that free-plan songs belong to Suno, while paid-plan songs generated during subscription belong to the user.

Key Participants

paccer
- Idea: Repeatedly discusses rights and permissions, including waiting on email clarification and explaining that paid ownership allows permissions or transfer.
- Stance: neutral
- Attitude: cautious, practical
- Evidence:
- "**waiting for a reply from email in regards to subscribing and transferring license/rights**"
- Explanation: Shows concern about legal/rights transfer and a desire to verify before acting.
- "**if you own it, you can do what you want with it, including giving someone else permissions for it**"
- Explanation: States a position on ownership rights once a user owns a track.

tonno0602
- Idea: Argues that human re-recording and reworking changes the legal position because AI-generated work itself is not copyrightable, but human performance/recording is.
- Stance: critical
- Attitude: analytical, candid
- Evidence:
- "**if I re-record... even stuff that I generated on the free plan become mine because as it stands, AI generated stuff is not copyrightable. While the stuff I record are**"
- Explanation: Directly frames a legal distinction between AI output and human-authored recording.
- "**The AI provided me with a rough sketch of a song that can be morphed into anything really**"
- Explanation: Positions Suno as a drafting tool rather than a finished rights-secure product.

sirbitesalot
- Idea: Emphasizes disclosure obligations for AI-generated content on YouTube and later discusses legal/copyright distinctions.
- Stance: neutral
- Attitude: matter-of-fact
- Evidence:
- "**you need to actually tag AI generated content on youtube now. Theres a new box you need to tick. it explicitly mentions AI generated music.**"
- Explanation: Shows concern with platform compliance and disclosure.
- "**Well, if you want to follow the rules you need to actually tag AI generated content**"
- Explanation: Reinforces that this is about rule-following, not just personal preference.

kasumi_noxumbra
- Idea: Reports suspected copyright infringement on Suno's trending page and looks for a way to report it.
- Stance: critical
- Attitude: concerned
- Evidence:
- "**possible copyright infringement I've come across**"
- Explanation: Introduces a direct legal concern.
- "**there is a song on the now trending page that is a actual studio artist song called "listen to your heart".**"
- Explanation: Specific allegation that a copyrighted commercial song appeared on Suno.
- "**I was going to but the only options are bug or inappropriate**"
- Explanation: Shows friction around limited reporting tools.

adarent
- Idea: Advises reporting infringing content; later gives detailed suggestions about copyright registration and takedowns when a user says their song was stolen.
- Stance: supportive
- Attitude: assertive, instructive
- Evidence:
- "**I think you can report it or something**"
- Explanation: Responds to infringement concern with practical action.
- "**The best thing you can do right now is file for copyright registration with the US Copyright Office RIGHT NOW**"
- Explanation: Strong practical/legal advice in response to reported theft.
- "**person who registers first is considered the rightful owner by default**"
- Explanation: Shows the conversation shifted from abstract rights to legal enforcement strategy.

ultimatem.
- Idea: Reports theft/reupload of a Suno song and becomes worried about public sharing safety.
- Stance: critical
- Attitude: alarmed
- Evidence:
- "**Someone, copyrighted an suno AI song that I made, re-uploaded it claiming it was his.**"
- Explanation: Direct report of alleged theft.
- "**I guess it isn't safe to make songs public. Guys keep songs private.**"
- Explanation: Shows how the discussion moved toward defensive behavior after the theft report.
- "**Someone may steal your work and claim it's theirs.**"
- Explanation: Generalizes the concern into a warning for others.

lynncole
- Idea: Reports a worse version of the same issue: song copied, republished under another name, and DMCA notices sent against the original.
- Stance: critical
- Attitude: distressed
- Evidence:
- "**Someone downloaded one of my songs, published it under their name, but with the same title, and then they started filing dmca notices on me to take the original down.**"
- Explanation: Clear escalation from copying to active legal harassment.
- "**This is crazy. Has anyone been through something like this?**"
- Explanation: Signals distress and asks whether this is a known pattern.
- "**I can't easily get to it on page 500 of library**"
- Explanation: Shows how platform limitations worsen the dispute.

wetcircuit
- Idea: Warns users that thieves are likely lazy and advises keeping songs private and not sharing direct links publicly before distribution.
- Stance: supportive
- Attitude: cautionary
- Evidence:
- "**Keep your Suno clips set to Link Only (never Public), and do not share the direct link with anyone.**"
- Explanation: Clear defensive advice tied to theft risk.
- "**Most likely any stolen songs were discovered on Suno's Explore page**"
- Explanation: Explains the likely exposure path.

Suno Team Response

furrybeans [Suno Team]
- Confirms a basic rights distinction: "**Technically, if you're on a free plan, Suno owns the song. You own the lyrics though.**"
- Suggests where to find official policy: "**Help/FAQs link on the site > Commercial Use**"
- Evidence:
- "**Technically, if you're on a free plan, Suno owns the song. You own the lyrics though.**"
- "**Help/FAQs link on the site > Commercial Use**"

Additional Evidence (Optional)

"**If you want to follow the rules you need to actually tag AI generated content on youtube now**"
Explanation: Supports that disclosure requirements on outside platforms were a real source of friction.

"**If you are a paying subscriber to Suno, then you own the artwork that accompanies the songs you generate while subscribed**"
Explanation: The FAQ excerpt pasted in chat supports the distinction between free and paid ownership.

Topic: Using AI to Imitate Existing Artists, Songs, or Copyrighted Styles

Description

Another major ethical/legal tension concerns using Suno or related AI workflows to imitate existing songs, artists, composers, or styles. This appears in direct feature requests, warnings about copyright infringement, and users openly trying to recreate or bias songs toward recognizable copyrighted works.

The conflict is not just abstract. Some users propose capabilities that others immediately call infringement, such as uploading an existing song "**and it would make something like that**," answered with "**Copyright infringement..**" and "**that's why you can't put artist names in prompts**." Other users explicitly attempt imitation anyway, e.g. "**I ask Claude to make a song similar to Barbie girl**

and it just steals the rhymes" and "**Plastic/fantastic everytime**." Still later, users discuss hidden workarounds: "**it's not hard to get around the style and likeness of musicians**."

The topic evolves from hypothetical feature ideas, to practical user experimentation around style imitation, to direct allegations that outputs got too close to known songs and disappeared, implying some internal restriction or moderation.

Timeline

- **2024-04-01 00:27:52 - 00:29:18**
- **2024-04-01 01:32:00 - 01:33:21**
- **2024-04-01 02:00:44 - 02:02:36**
- **2024-04-01 04:13:48 - 04:15:50**
- **2024-04-01 10:36:37 - 10:37:04**
- **2024-04-01 16:24:59 - 16:26:43**
- **2024-04-01 17:56:56 - 16:57:37**
- **2024-04-02 04:14:18 - 04:16:32**
- **2024-04-04 04:14:54 - 04:16:24**

Discussion evolution:
- It begins with feature requests to upload an existing song and generate "something like that," immediately challenged as copyright infringement.
- Users then ask directly if style prompts can name songs/artists and are told "for copyright reasons."
- Later, users notice Suno reproducing parts of existing songs ("**the main riff of Atomic by Blondie**").
- The issue escalates when users report that songs too close to real works may disappear, e.g. a "**very close female rendition of heart shaped box by nirvana**" allegedly being deleted.
- By the end, users are openly discussing methods to steer outputs toward specific artist styles while recognizing legal and moderation limits.

Key Participants

the.vengeance
- Idea: Wants a feature to upload an existing song and have Suno make something similar.
- Stance: supportive
- Attitude: casual, insistent
- Evidence:
- "**Suno should add a feature where u can drop in an existant song or sound or theme or somethin an it would make something like that**"
- Explanation: Direct request for imitation-oriented functionality.
- "**nah itd just make something that sounds like it**"
- Explanation: Minimizes the infringement concern but still supports imitation.

.bigmood
- Idea: Repeatedly flags copyright concerns and reports how AI lyric tools plagiarize rhyme patterns.
- Stance: critical
- Attitude: blunt
- Evidence:
- "**Copyright infringement..**"
- Explanation: Immediate pushback to the song-upload imitation idea.
- "**People would misuse it.. that's why you can't put artist names in prompts**"
- Explanation: Connects feature restrictions to predictable misuse.
- "**I ask Claude to make a song similar to Barbie girl and it just steals the rhymes**"

- Explanation: Concrete example of AI output becoming too derivative.
- "**Plastic/fantastic everytime**"
- Explanation: Shows the repeated reuse of iconic rhyme pairs.

authorityenacted
- Idea: Explains that artist/song-name prompting is blocked for copyright reasons.
- Stance: neutral
- Attitude: concise
- Evidence:
- "**for copyright reasons**"
- Explanation: Direct answer to why song/artist similarity prompts do not work.

kasumi_noxumbra
- Idea: Points out a supposedly real commercial song on trending, raising the issue of direct copying rather than style imitation.
- Stance: critical
- Attitude: concerned
- Evidence:
- "**there is a song on the now trending page that is a actual studio artist song called "listen to your heart"**"
- Explanation: Adds a concrete example of alleged direct overlap with an existing song.

cultofthings
- Idea: Says it is not hard to get around likeness restrictions and suggests songs that get too close may be removed.
- Stance: supportive
- Attitude: matter-of-fact
- Evidence:
- "**It's actually not super difficult to get around the style and likeness of musicians**"
- Explanation: Openly states users can bypass intended limitations.
- "**What I noticed though is that my songs "disappear" when they get too close to the original.**"
- Explanation: Suggests internal moderation triggers on overly derivative outputs.
- "**a very close female rendition of heart shaped box by nirvana, got deleted**"
- Explanation: Specific example of imitation crossing a line.

Suno Team Response

furrybeans [Suno Team]
- No direct policy defense of imitation requests beyond joking prompts, but the team does not endorse it.
- Evidence:
- "**Try beginning: "In the neon shire..."**"
- Explanation: A joking response to a user struggling with Lord of the Rings-style prompting, not a substantive policy answer.

Additional Evidence (Optional)

"**On a song I generate, suno decided to plop the main riff of Atomic by Blondie LMFAO**"
Explanation: Suggests accidental resemblance to known music happens in practice.

"**I had some of them disappeared... What is happening?**"

Explanation: In context with later examples, some users interpret disappearing songs as related to closeness to copyrighted works, though this is not conclusively proven.

Topic: Misleading or Manipulative Streaming / Promotion Tactics for AI Music

Description

A third ethical tension concerns advice and debate around gaming music platform algorithms or artificially boosting streams for AI-generated songs. This includes one user promoting a “secret sauce” approach to manipulating recommendation systems by repeated self-streaming and playlist construction, while others warn that distributors may flag such behavior as botting or suspicious.

The tension is clear because users disagree directly. One user lays out a detailed tactic: “**put your songs in a playlist with other up and coming artists in same genre, stream it nonstop for a few months, and then you'll hit the algorithm**.” Others immediately object: “**sounds like a good way for the distributor to flag your account**” and “**they probably filter out your own listens after a certain threshold**.”

This is specifically relevant to AI music because the advice is being shared in the context of distributing Suno-generated tracks to Spotify and using streaming behavior to gain traction.

Timeline

- **2024-04-01 00:42:01 - 00:55:00**
- **2024-04-01 00:49:01 - 00:50:53**

Discussion evolution:
- A Deleted User proposes a tactic of nonstop streaming one’s own songs inside mixed playlists to trigger platform algorithms.
- Other users question the legality or safety of the approach and mention botting flags.
- The Deleted User doubles down repeatedly, distinguishing it from bots and claiming insider advice from someone making “**$3k-$4k per month**.”
- Other users suggest alternative promotional strategies like TikTok rather than self-streaming.

Key Participants

Deleted User
- Idea: Advocates self-streaming in mixed playlists as an algorithm hack and insists it is not botting.
- Stance: supportive
- Attitude: confident, insistent
- Evidence:
- “**put your songs in a playlist with other up and coming artists in same genre, stream it nonstop for a few months**”
- Explanation: Core tactic being proposed.
- “**that's not botting**”
- Explanation: Explicit defense against ethical criticism.

- “**a best-kept secret**”
- Explanation: Frames it as insider knowledge.
- “**he makes about $3k-$4k just from doing that**”
- Explanation: Attempts to validate the method through anecdotal success.

authorityenacted
- Idea: Warns that repeated self-streaming may be filtered or flagged.
- Stance: critical
- Attitude: skeptical
- Evidence:
- “**they probably filter out your own listens after a certain threshold**”
- Explanation: Pushes back on the effectiveness of the tactic.
- “**sounds like a good way for the distributor to flag your account**”
- Explanation: Raises platform enforcement concerns.
- “**some distributors were flagging artists for botting**”
- Explanation: Brings prior platform behavior into the discussion.

evilee.gg
- Idea: Suggests TikTok-first promotion instead of trying to optimize Spotify’s algorithm by self-streaming.
- Stance: critical
- Attitude: practical
- Evidence:
- “**I've just started posting the ones i make and really like to TikTok. if they take off, then you hype it up more and set a post date to Spotify. Thats how you really do it.**”
- Explanation: Offers a clear alternative strategy.
- “**Spotify's listener algorithm, for descoverablity is trash**”
- Explanation: Critiques the platform rather than suggesting manipulation.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

“**because all day i listened to two of my suno songs on repeat**”
Explanation: Shows the proposed tactic is not theoretical; the user presents it as current practice.

“**never on repeat, apparenlty like 20% yours and 80% others**”
Explanation: Indicates an attempt to frame the manipulation as organic listening behavior.

Topic: AI Content Labeling and Platform Compliance

Description

There is also a smaller but distinct tension around whether AI-generated music should be labeled as AI on platforms like YouTube, and whether not labeling it is deceptive or simply a practical choice to avoid

audience bias.

Users disagree on whether tagging AI content matters. One user says “**you need to actually tag AI generated content on youtube now**,” while another questions “**Why should it matter if the music is ai generated or not**.” Others admit avoiding “AI” in titles because “**people will see AI and not click**.”

This is an ethical issue because it concerns disclosure and transparency rather than technical rights.

Timeline

- **2024-04-01 02:27:41 - 02:34:10**

Discussion evolution:
- Users discuss whether to include “AI” in titles or album names.
- Some say they avoid it because audiences skip AI content.
- Another user says YouTube now requires an AI-generated content label.
- This produces light disagreement about whether AI disclosure should matter at all.

Key Participants

kibbby
- Idea: Avoids labeling songs/titles with AI because it hurts clicks.
- Stance: critical
- Attitude: pragmatic
- Evidence:
- “**I feel like probably miss out on listeners doing that. So Im not gonna**”
- Explanation: Shows concern that disclosure reduces reach.
- “**people will see AI and not click**”
- Explanation: Explicitly states the expected audience reaction.

sildegar
- Idea: Thinks “AI” labeling causes immediate skipping, so keeps disclosure minimal.
- Stance: critical
- Attitude: resigned
- Evidence:
- “**i know it's a insta-skip to see IA**”
- Explanation: Supports the claim that AI labels discourage engagement.

sirbitesalot
- Idea: Says YouTube rules require AI-generated music disclosure.
- Stance: supportive
- Attitude: matter-of-fact
- Evidence:
- “**you need to actually tag AI generated content on youtube now. Theres a new box you need to tick. it explicitly mentions AI generated music.**”
- Explanation: Directly frames disclosure as a platform rule.

david_the_coder
- Idea: Questions why AI labeling should matter.
- Stance: critical
- Attitude: dismissive
- Evidence:

- “**Why should it matter if the music is ai generated or not**”
- Explanation: Direct challenge to the importance of disclosure.
- “**in the future, it will all be ai generated lol**”
- Explanation: Suggests disclosure will become meaningless.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

“**I'd probably mention it in description**”
Explanation: Shows some users seek a middle ground: disclose, but not prominently in the title.

Chunk 2: 2024-04-04 to 2024-04-06

Topic: Publishing, Ownership, and Theft of AI-Generated Songs

Description

A recurring ethical/legal tension appears around whether AI-generated songs can be published commercially, who owns them, and what happens when others repost or monetize them. The conflict is not between all participants, but there is clear friction through warnings about theft, doubts about ownership, and references to others uploading songs elsewhere.

Users discuss both rights and vulnerability to copying. One user says songs can be published commercially on a paid plan: “**under a paid plan generation - yes**” and “**you own all the rights**.” But another thread raises risks of theft: “**someone's suno song was put on apple music by another person to monetize**” and “**it's a place that is ripe for the taking as far as theft goes**.” A direct disagreement emerges when one user questions how upset people should be about theft in the context of AI: “**Given how most generative AI is trained on stolen data, I'm not sure just how mad you can get about this**.”

The discussion also includes uncertainty about platform rules. A user asks: “**If you have the pro or premier subscription... I guess I can use them for commercial purposes, right?**” Later, another asks whether they can post music on YouTube or Spotify, and multiple users answer in terms of paid vs free use. This shows repeated friction around the legal/ethical boundaries of AI music publication and monetization.

Timeline

- **2024-04-04 08:14:42 - 08:16:02**
- **2024-04-04 08:51:48 - 08:59:19**
- **2024-04-04 09:00:48 - 09:01:08**
- **2024-04-04 09:20:55 - 09:31:39**
- **2024-04-04 11:31:23 - 11:32:33**
- **2024-04-04 13:55:47 - 13:58:30**

- **2024-04-04 15:58:37 - 16:00:26**
- **2024-04-04 20:18:13 - 20:18:38**
- **2024-04-04 20:49:39 - 20:50:58**
- **2024-04-04 23:03:35 - 23:08:36**
- **2024-04-05 09:01:24 - 09:01:34**

Evolution over time
- The discussion starts with a straightforward rights question about uploading to Spotify and gets an informal answer that paid-plan users can publish and “own all the rights.”
- It then shifts into theft concerns when users discuss someone else monetizing a Suno song on Apple Music and debate whether public posting exposes creators to appropriation.
- A sharper ethical disagreement follows when one participant argues that, because generative AI is “trained on stolen data,” outrage over theft of AI-generated works is limited.
- The topic resurfaces with legal/copyright concerns tied to a news article, where users debate whether generated music is infringing, whether AI threatens artists, and whether the public should be reassured.
- Later, more users return to practical questions about YouTube/Spotify use and free-vs-paid restrictions, showing the issue remained unresolved and recurrent.

Key Participants

adarent
- Idea: Says paid-plan generations can be uploaded to Spotify and commercially used; frames AI music as legally owned by the user under paid use, but also raises an ethical question about whether creators should disclose AI use.
- Stance: supportive
- Attitude: confident, slightly provocative
- Evidence:
- “**under a paid plan generation - yes**”
- Explanation: This directly answers a commercialization question in favor of publishing with a paid plan.
- “**go nuts you own all the rights**”
- Explanation: This is an explicit claim of ownership for paid users.
- “**the question is whether or not you'll be ethical about it and tell people**”
- Explanation: This introduces an ethical layer beyond legality.

vito_pizzarelli
- Idea: Warns that publicly shared songs can be stolen and monetized by others; sees the space as vulnerable to opportunistic theft.
- Stance: critical
- Attitude: protective, concerned
- Evidence:
- “**I'm protective of the good outputs**”
- Explanation: Shows caution about exposing valuable songs.
- “**it's a place that is ripe for the taking as far as theft goes**”
- Explanation: Explicitly frames the environment as theft-prone.
- “**someone's suno song was put on apple music by another person to monetize**”
- Explanation: This reported case drives the theft concern.

5cap
- Idea: Pushes back on theft outrage by tying it to broader concerns about generative AI being trained on “stolen data.”
- Stance: critical

- Attitude: skeptical, blunt
- Evidence:
- "**Given how most generative AI is trained on stolen data, I'm not sure just how mad you can get about this**"
- Explanation: This is the clearest ethical challenge to complaints about others stealing AI-generated songs.

iicaptain73
- Idea: Summarizes a reported theft case and later emphasizes that music should be registered under a real name if one wants protection.
- Stance: neutral
- Attitude: matter-of-fact
- Evidence:
- "**someone's suno song was put on apple music by another person to monetize**"
- Explanation: This concise summary influences the discussion by framing the risk clearly.
- "**You are, obviously. However, if you want to register your song, it should be real name.**"
- Explanation: Adds practical/legal-minded guidance about attribution and registration.

draconiator
- Idea: Questions whether paid-plan ownership means users count as musicians.
- Stance: neutral
- Attitude: reflective
- Evidence:
- "**On pro we are given ownership of the songs we make...but technically, does that make us musicians?**"
- Explanation: This broadens the legal ownership topic into a moral/identity question about authorship.

beatmaker5710
- Idea: Expresses concern that high-quality AI outputs may be copyright infringement and doubts originality of melodies.
- Stance: critical
- Attitude: worried
- Evidence:
- "**everything good it generates is a copyright infringement**"
- Explanation: This is a direct critical claim tied to copyright concerns.
- "**I wonder is it right cuz I am seriously doubting melodies are original**"
- Explanation: Shows concern over ethical/legal legitimacy of generated melodies.

t1tuscrow
- Idea: Argues music is always derivative, while also warning that legal reality may still favor those with money.
- Stance: neutral
- Attitude: resigned, reflective
- Evidence:
- "**There really is nothing new under the sun. It's all just remixes in new packaging.**"
- Explanation: Frames music creation as inherently derivative.
- "**you're right but you lose anyway because you can't afford to defend the position.**"
- Explanation: Acknowledges legal systems can overpower the merits of an argument.

lenscap10
- Idea: Suggests that the more money Suno makes, the more lawsuits it will attract.
- Stance: critical
- Attitude: wary

- Evidence:
- "**The more money Suno makes, the faster the lawsuits will be coming for any reason whatsoever**"
- Explanation: Explicitly links commercial success with legal pressure.

helsing001
- Idea: Raises a direct legal question about whether Suno has plans to prevent outputs from sounding too similar to copyrighted music.
- Stance: critical
- Attitude: concerned, inquisitive
- Evidence:
- "**does Suno have any plans to introduce real time content recognition to make sure the generated clip doesn't sound too similar to existing music?**"
- Explanation: This is a direct request for a legal-risk mitigation mechanism.

alliecat4
- Idea: Minimizes one press narrative by arguing the reported "copyrighted material" story is weak because it required violating ToS, but openly acknowledges AI trains on material without artist permission.
- Stance: neutral
- Attitude: dismissive, blunt
- Evidence:
- "**That sounds like a non story**"
- Explanation: Dismisses the significance of the press narrative.
- "**To do that they had to violate TOS**"
- Explanation: Reframes the issue as misuse rather than core product behavior.
- "**the answer is, of course it effing does but that's currently legal**"
- Explanation: Explicitly acknowledges training on unpermitted material while focusing on legality.

Suno Team Response

furrybeans [Suno Team]
- Does not directly answer the theft/copyright concerns in this portion of the logs. Their contributions nearby focus on educational and creative use of Suno, including learning by splitting tracks and reconstructing instrumentation.
- Evidence:
- "**I like to split Suno generated music, put the parts in my DAW and then try to work out what notes and instruments are used.**"
- Explanation: This shows a creative/educational framing of use, but it is not a direct response to the ownership/theft dispute.

Additional Evidence (Optional)

"**OneRPM refused me distribution**"
Explanation: This supports that commercialization/distribution is not frictionless even when users want to publish songs, adding to the practical tension around AI music rights and platform acceptance.

Topic: Copyright Infringement, Training Data, and Public Backlash Against AI Music

Description

A sustained conflict centers on whether Suno and AI music tools infringe copyright, whether the training data is ethically acceptable, and how the public conversation around AI music is being shaped. This is one of the clearest ethical/legal contention threads in the logs.

The discussion is triggered multiple times by a linked article about Suno in the news. Some users perceive press coverage as hostile: "**every time AI shows up in the news it's always negative**." Others argue the article is making a false scandal out of something trivial, while also acknowledging a more serious underlying issue: training on copyrighted music without permission.

There is also disagreement about whether generated outputs are themselves infringing. One side argues many generated outputs are inherently derivative or even "copyright infringement," while another side argues all music is derivative, and that this alone should not make AI generation uniquely culpable. A separate line of tension asks whether Suno should implement recognition systems to stop outputs that sound too similar to existing songs.

This topic is directly tied to legal, ethical, and policy concerns about AI music generation.

Timeline

- **2024-04-04 08:21:07 - 08:24:08**
- **2024-04-04 09:20:55 - 09:31:39**
- **2024-04-04 10:35:10 - 10:41:07**
- **2024-04-04 12:05:33 - 12:17:04**

Evolution over time
- The topic begins when a user posts a news article and another immediately says AI coverage is "always negative."
- Discussion escalates into direct claims like "everything good it generates is a copyright infringement," which others counter by arguing that all songwriting builds on prior music.
- A more focused legal concern appears when a user asks whether Suno has a plan for real-time content matching to avoid similarity to copyrighted songs.
- Several users then dispute the legitimacy of the article's framing: some call it a "non story" because it required violating ToS, while others say journalists are exploiting a broader optics war around AI.
- The topic closes without a direct team answer on training data or content-recognition safeguards.

Key Participants

draconiator
- Idea: Brings the article into discussion and keeps re-raising AI/music industry conflict.
- Stance: neutral
- Attitude: exasperated
- Evidence:
- "**Ack, here we go again, Suno in the news again.**"
- Explanation: This reintroduces the public controversy and frames it as recurring.

adarent
- Idea: Sees media coverage of AI as predominantly negative and anxiety-inducing for users of AI tools.
- Stance: supportive
- Attitude: wary, resigned
- Evidence:
- "**every time AI shows up in the news it's always negative**"
- Explanation: This clearly frames press coverage as hostile.
- "**every time I see something I'm using appear in a headline I have to steel myself**"
- Explanation: Shows repeated tension around public backlash.

beatmaker5710
- Idea: Claims good AI outputs may be copyright infringement and later worries AI can reproduce melodies 1:1 without transparency.
- Stance: critical
- Attitude: worried, assertive
- Evidence:
- "**everything good it generates is a copyright infringement**"
- Explanation: Direct accusation about AI output.
- "**the problem with AI is that they can be 1 to 1 and you can never know it**"
- Explanation: Further explains the concern as lack of traceability.

t1tuscrow
- Idea: Counters that human songwriting is also derivative and all music is remix-like, though lawsuits can still crush creators.
- Stance: supportive
- Attitude: reflective
- Evidence:
- "**There really is nothing new under the sun. It's all just remixes in new packaging.**"
- Explanation: Pushes back on treating AI derivation as exceptional.
- "**Then you are right but you lose anyway because you can't afford to defend the position.**"
- Explanation: Recognizes legal asymmetry even if philosophically supportive.

vito_pizzarelli
- Idea: Wants users to defend AI in public comment sections and argues AI augments rather than replaces human artists.
- Stance: supportive
- Attitude: activist, defensive
- Evidence:
- "**can people go into the comments section of this article and reassure them that AI isn't a threat to their livelihoods**"
- Explanation: Tries to mobilize community defense.
- "**AI won't replace human artists, it'll augment them.**"
- Explanation: Clear pro-AI position.
- "**I see Suno as a stepping stone to me learning how to make music on my own**"
- Explanation: Frames it as educational augmentation.

helsing001
- Idea: Asks whether devs are aware of the article and whether there are plans for real-time content recognition.
- Stance: critical
- Attitude: concerned, measured
- Evidence:

- “**does Suno have any plans to introduce real time content recognition to make sure the generated clip doesn't sound too similar to existing music?**”
- Explanation: Raises a concrete legal-risk mitigation question.

alliecat4
- Idea: Dismisses the article’s “gotcha” as weak while acknowledging training data concerns are the real issue.
- Stance: neutral
- Attitude: blunt
- Evidence:
- “**There’s also the fact that it’s a non story**”
- Explanation: Rejects the specific scandal angle.
- “**What they are trying to make the story about is, does it train on stuff without artist permission, and the answer is, of course it effing does but that’s currently legal**”
- Explanation: Explicitly states the training-data issue.

unchaintheais
- Idea: Argues journalists want a story and that anti-copyright feature tuning could ruin output quality; criticizes AI filtering.
- Stance: supportive
- Attitude: cynical, frustrated
- Evidence:
- “**The journalists need a story**”
- Explanation: Accuses media of sensationalism.
- “**some anticopyright feature training will ruin what they generated**”
- Explanation: Opposes heavy anti-copy safeguards as harmful to output.
- “**ai filters are a dumb fad**”
- Explanation: Broadly critical of restrictions.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

“**The more money Suno makes, the faster the lawsuits will be coming for any reason whatsoever**”
Explanation: Reinforces that legal exposure itself was a source of concern in the discussion.

Topic: AI Replacing or Devaluing Human Musicians and Music Work

Description

Another repeated ethical tension concerns whether AI music generation will replace musicians, devalue musical labor, or simply become another tool. This topic is moral and economic rather than directly legal, but it is clearly tied to the ethics of AI music use.

Some users argue AI will not replace artists because people will still make music for passion, go to concerts, and value live performance. Others counter that musicians using AI will replace musicians who do not, or that the economics of music creation will shift sharply. There is also introspection about whether using Suno makes one a “musician” at all.

This discussion is not fully resolved, but there is repeated friction over what AI means for human artistry and livelihood.

Timeline

- **2024-04-04 09:00:48 - 09:01:08**
- **2024-04-04 09:19:29 - 09:35:20**
- **2024-04-04 10:28:48 - 10:31:00**
- **2024-04-04 11:32:27 - 11:34:40**
- **2024-04-04 16:32:51 - 16:33:08**
- **2024-04-04 18:05:15 - 18:05:15**

Evolution over time
- The issue starts as identity uncertainty: if users own songs they generate, does that make them musicians?
- It expands into practical impact, with one user saying they now generate background music instead of making it manually in a DAW, and another saying “musicians who use ai will replace musicians.”
- Others push back by comparing AI to Photoshop for photography or automobiles replacing horses, arguing the tool changes workflows more than it erases the field.
- The discussion also includes emotional claims that current music is already formulaic and that AI could someday outperform human emotional composition.
- A Suno team member contributes by framing Suno as educational: splitting stems and learning instruments from AI outputs.

Key Participants

draconiator
- Idea: Wonders whether ownership via paid plan makes users musicians; later argues technology does not fully erase the prior domain.
- Stance: neutral
- Attitude: reflective
- Evidence:
- “**technically, does that make us musicians?**”
- Explanation: Opens the identity question.
- “**Did we kill all horses when automobiles hit the scene? NO.**”
- Explanation: Suggests transformation rather than total replacement.

iicaptain73
- Idea: Uses Suno to replace time-consuming copyright-free background music creation for videos, implying workflow displacement.
- Stance: supportive
- Attitude: matter-of-fact, impressed
- Evidence:
- “**Now I just prompt, gen and save.**”
- Explanation: Clear example of replacing a prior manual music-making task with AI.

beatmaker5710

- Idea: Says AI tools will mostly be used by producers/songwriters and not replace traditional artists; elsewhere worries about originality.
- Stance: neutral
- Attitude: analytical
- Evidence:
- "**AI tools will be used mostly by producers and songwriters... There is no way they will replace traditional artists**"
- Explanation: Clear stance that AI is a tool, not a total substitute.

lomerio
- Idea: States that musicians using AI will replace musicians who do not.
- Stance: critical
- Attitude: blunt, fatalistic
- Evidence:
- "**musicians who use ai wil lreplace musicians**"
- Explanation: Direct statement of labor displacement.
- "**technology is brutal**"
- Explanation: Adds explicit harshness to the stance.

joachip_work
- Idea: Uses analogy that photographers still use Photoshop, suggesting adaptation rather than replacement.
- Stance: supportive
- Attitude: dry, lightly humorous
- Evidence:
- "**But Photoshop killled all photographers! oh wait, today photographers _use_ photoshop...**"
- Explanation: Supports a tool-augmentation view.

t1tuscrow
- Idea: Thinks AI could eventually become so emotionally optimized that it changes music consumption radically, though not necessarily immediately.
- Stance: neutral
- Attitude: speculative, uneasy
- Evidence:
- "**What happens if in 3-5 years Ai is so good at recognising our emotional buttons it creates music like we have never heard that works on us like falling in love every time?**"
- Explanation: Raises a future ethical/cultural concern about manipulation and replacement.

Suno Team Response

furrybeans [Suno Team]
- Frames Suno as a tool for education and learning musical construction, not just output generation.
- Evidence:
- "**I like to split Suno generated music, put the parts in my DAW and then try to work out what notes and instruments are used.**"
- Explanation: Suggests a learn-from-the-tool posture rather than a replacement-only view.

Additional Evidence (Optional)

"**People who WANT to make music because it's their passion will still want to make music.**"
Explanation: This from **iicaptain73** supports the view that AI may not erase musical desire or live music culture even if it alters workflows.

Chunk 3: 2024-04-06 to 2024-04-09

Topic: AI Copyright, Ownership, and Monetization of Suno-Generated Songs

Description

A repeated source of tension is whether AI-generated songs can be legally or ethically monetized, who owns them, and what changes when a user is on the free plan versus a paid subscription. The discussion is contentious because users disagree about whether AI music can be copyrighted at all, whether lyrics written by users change that, and what rights free versus paid users actually have. The discussion also includes concern about songs being stolen and redistributed, and arguments over whether AI training itself is legally or morally problematic.

Timeline

- **2024-04-07 00:27:41 - 00:28:29**
- **2024-04-07 01:33:33 - 01:39:55**
- **2024-04-07 01:53:12 - 02:01:20**
- **2024-04-07 08:25:52 - 08:27:41**
- **2024-04-07 09:57:13 - 10:00:56**
- **2024-04-07 15:15:43 - 15:25:12**
- **2024-04-07 17:21:22 - 17:24:37**
- **2024-04-08 00:50:14 - 01:00:56**
- **2024-04-08 10:57:16 - 11:08:07**
- **2024-04-08 23:59:43 - 2024-04-09 00:01:00**
- **2024-04-09 10:46:47 - 10:55:00**
- **2024-04-09 11:15:19 - 11:17:11**
- **2024-04-09 11:48:44 - 11:52:19**

The discussion begins with practical questions about whether Suno songs can be uploaded to YouTube or monetized. It then evolves into broader arguments about ownership, whether AI outputs can be copyrighted, whether human-written lyrics are enough to establish ownership, and whether training on copyrighted works is itself problematic. Later, the discussion becomes more adversarial, with users directly disputing legal interpretations and the ethics of AI training and redistribution.

Key Participants

hamsterhenry
- Idea: Asked whether Suno outputs are “copyright free” and whether they can be posted online without takedowns.
- Stance: neutral
- Attitude: inquisitive
- Evidence:
- "so is this suno stuff copyright free or some percent of it's borrowed from somwhere?"
- Explanation: Directly raises the copyright/ownership issue without taking a position.

- "Like i can post it online like youtube without, people taking it down via copyrights"
- Explanation: Shows concern about practical copyright enforcement.

.derbaum.
- Idea: Repeatedly explains that paid-period songs can be commercially used, while free-plan songs cannot be monetized and belong to Suno; also pushes back on unsupported legal assumptions.
- Stance: supportive of Suno’s stated rules / corrective
- Attitude: calm, explanatory
- Evidence:
- "you can use a song made during a payed subscription for a monetised application of your choice. free songs belong to suno"
- Explanation: Clear summary of the rule distinction.
- "if you have a free suno account you can upload but not monetise the video and have to mention suno. if you have a payed account you can monetise the song."
- Explanation: Reiterates the policy in practical terms.
- "songs made during the payed period fully belong to you. You can monetise them in any application you want."
- Explanation: States the pro-subscription rights position directly.
- "there are other countrys with completely different copyright laws exist....."
- Explanation: Pushes back against overgeneralized legal claims.

dreamtrove.
- Idea: Argues that legal treatment of AI-generated works is uncertain and may depend on jurisdiction; also argues style copying is not itself illegal.
- Stance: mixed / analytical
- Attitude: reflective, argumentative
- Evidence:
- "that depends entirely on Korean law."
- Explanation: Explicitly frames copyright as jurisdiction-dependent.
- "suno.ai is not going to claim copyright, but in some jurisdictions ai gens are public domain. but human+ai should be able to have copyright most places"
- Explanation: States a nuanced position about differing legal treatment.
- "style copying is not illegal or a copyright issue"
- Explanation: Distinguishes style from copyrightable material.

hamsterhenry
- Idea: Accepted an explanation that paid subscription songs are usable commercially while free songs are not.
- Stance: neutral
- Attitude: receptive
- Evidence:
- "cause i posted some of "my work" on social media platforms like youtube, soundcloud, and roblox"
- Explanation: Shows the issue matters to their actual use.
- "yeah ik"
- Explanation: Indicates acceptance of the explanation.

artccue
- Idea: Asked several times whether Suno songs can be uploaded to YouTube and monetized.
- Stance: neutral
- Attitude: uncertain, learning
- Evidence:
- "can we upload the songs to own youtube channel?"
- Explanation: Introduces the practical publication question.

- "pay account means subscription to Suno, right?"
- Explanation: Shows uncertainty about the conditions for commercial use.
- "how to monetize the song?"
- Explanation: Continues the practical line of questioning.

lurak0415
- Idea: Asked whether songs created before upgrading from a basic plan can be used for YouTube or copyright registration.
- Stance: neutral
- Attitude: cautious, hopeful
- Evidence:
- "I was making a song with Basic Plan and I really liked the song, so I subscribed to Pro Plan. Is it okay to use this for YouTube or something like that?"
- Explanation: Brings up the edge case of pre-subscription creations.
- "I want to register this copyright in Korea and promote suno.ai and songs to others, is that okay?"
- Explanation: Extends the issue into formal copyright registration.

davidanderson3
- Idea: Gives repeated, sometimes simplified answers about monetization and rights; later questions account and rights workarounds.
- Stance: supportive / occasionally speculative
- Attitude: casual, sometimes overconfident
- Evidence:
- "yes if you are a free user rember to give suno credit and turn of comercial ussage"
- Explanation: Gives a simplified summary of free-plan restrictions.
- "is it against tos to make anouther account and upgrade your plan"
- Explanation: Raises a possible workaround / policy edge case.
- "subscribers can most free people can do is upload to yt and put made with suno in the title"
- Explanation: Reinforces the free vs paid distinction.

.devilmaster
- Idea: Asked whether copyrighted IP characters/topics are allowed in songs.
- Stance: neutral
- Attitude: practical
- Evidence:
- "I'm having problems with a Godzilla vs King Kong fan song. Does Suno allow songs about copyrighted IPs?"
- Explanation: Raises another legal/rights concern tied to AI music use.

hamsterhenry
- Idea: Asked about copyright takedowns and ownership in relation to their own uploads.
- Stance: neutral
- Attitude: worried
- Evidence:
- "cause i posted some of "my work" on social media platforms like youtube, soundcloud, and roblox"
- Explanation: Ties legal questions to real uploads they've already made.

dreamtrove
- Idea: Suggests uncertainty but leans toward mixed human+AI outputs having stronger legal footing.
- Stance: analytical
- Attitude: calm
- Evidence:
- "human+ai should be able to have copyright most places"

- Explanation: Suggests human contribution changes the legal analysis.

hamsterhenry
- Idea: Asked whether songs are “borrowed from somewhere.”
- Stance: critical/concerned
- Attitude: cautious
- Evidence:
- "so is this suno stuff copyright free or some percent of it's borrowed from somwhere?"
- Explanation: Expresses suspicion about training/source material.

Suno Team Response

furrybeans [Suno Team]
- Clarifies that subscription credits are monthly, not daily, and distinguishes rights based on whether songs were made during the paid period.
- Evidence:
- "No, you get a set amount of credits to use at any point during the month"
- Explanation: Direct response on subscription credits.
- "To clarify: Once your cancel your subscription, when the subscription ends, you will start getting 50 credits per day and be on the basic/free plan again. You'll retain the rights to the songs you created during your subscription"
- Explanation: Clear official explanation of paid-plan rights carrying forward after the plan ends.

furrybeans [Suno Team]
- Confirms there is no API at present.
- Evidence:
- "Suno don't provide an API at the moment"
- Explanation: Relevant where users wanted to integrate or automate use commercially/technically.

Additional Evidence (Optional)

"it’s not just releasing someting on spotify."
Explanation: Shows that some users argue monetization and discovery are difficult regardless of AI generation quality.

Topic: Whether AI Music Is “Real” Art / Threat to Musicians and Industry

Description

A long-running conflict centers on whether AI music tools like Suno are legitimate creative tools or ethically troubling shortcuts that may undermine musicians, jobs, and artistic value. Participants argue over whether Suno is an “instrument,” whether prompting is a real skill, whether AI-generated songs are commercially viable, and whether AI will replace artists or just augment them. This is one of the most heated topics in the logs, with direct accusations, defensiveness, and references to “antis.”

Timeline

- **2024-04-07 03:02:20 - 03:09:11**
- **2024-04-07 03:21:59 - 03:39:05**
- **2024-04-07 04:06:23 - 04:25:30**
- **2024-04-07 04:31:07 - 04:50:57**
- **2024-04-07 04:58:44 - 05:00:10**

The issue begins with users referencing “antis” entering the server and calling AI “music theft.” It then broadens into a philosophical and commercial debate: is Suno an instrument or merely a generator? can it replace artists? should AI output be disclosed? Over time, participants polarize into pro-AI accelerationists, cautious supporters, and users concerned with ethics and disclosure.

Key Participants

kudagras
- Idea: Strongly argues AI music is a legitimate, skill-based tool and already commercially viable; rejects claims that people will always be able to distinguish it.
- Stance: supportive
- Attitude: forceful, combative, defensive
- Evidence:
- "I just want people to understand this tech is additive not subtractive"
- Explanation: Frames AI as beneficial rather than destructive.
- "this is a legit instrument"
- Explanation: Explicitly argues for instrument/tool legitimacy.
- "Respectfully you realize this is already good enough to be used commercially?"
- Explanation: Direct claim about commercial readiness.
- "Look me in the eyes and tell me the model cannot be used in a way that will convince someone right now in it current state"
- Explanation: Argues current outputs can already pass as convincing.
- "Im a huge proponent of the tech and i think the world needs to mature about this topic."
- Explanation: Broad pro-AI position.
- "If u want transparency you have to stop disparaging its use"
- Explanation: Links social hostility toward AI users with reduced disclosure.

apocalypsegamer1
- Idea: Supports AI as a tool but pushes back on exaggerations; argues Suno is not really an instrument, has limited skill expression, and should primarily be used for learning or inspiration.
- Stance: critical
- Attitude: skeptical, argumentative, sometimes frustrated
- Evidence:
- "I definitely disagree that it will replace artists"
- Explanation: Rejects replacement narrative.
- "eh I'd shy away from calling this an instrument"
- Explanation: Disputes the “instrument” framing.
- "it's only slightly skill and still a bunch of luck"
- Explanation: Minimizes prompting as craftsmanship.
- "Used to be pro ai and now I'm mostly against unless it's used as a learning experience"
- Explanation: Clear shift into a more critical stance.
- "the most ethical way to use it though is inspiration and practice"
- Explanation: Gives a normative ethical use case.
- "I really hope that honestly suno is used as an education tool"

- Explanation: Favors educational over direct commercial/artistic replacement use.

bigsparkzy
- Idea: Accepts AI as a tool and inspiration source, but strongly objects to passing raw AI outputs off as one’s own music without transparency.
- Stance: critical
- Attitude: firm, explanatory
- Evidence:
- "for people to take a Suno song and upload it to YT with their own name slapped on it without any edits, just uploading the MP3 file with some visuals, that's pretty cringe tbh as a musician myself."
- Explanation: Strong criticism of undisclosed raw AI uploads.
- "Just be transparent is all."
- Explanation: Condenses their ethical position.
- "If artists decide to recreate the AI track and play it live, guess what. It's no longer an AI song."
- Explanation: Draws a line around human performance/reworking as more legitimate.
- "Using AI to generate the entire song, it's structure, it's flow, it's vocalist, that's where it stops for me."
- Explanation: Sets a boundary for acceptable AI use.

eternyti
- Idea: Argues disclosure and separation of AI/non-AI content is the best ethical approach; pushes back on absolutist claims that no one can tell or care.
- Stance: critical
- Attitude: sharp, reasoned, sometimes exasperated
- Evidence:
- "AI gen content must be disclosed as such and treated separately from non-AI content."
- Explanation: Clear ethical principle.
- "it would be better to segregate content made with AI vs no AI. something like Suno's explore page but with the scope of Youtube"
- Explanation: Proposes structural separation.
- "you're not fucking Nostradamus so please don't pretend to be"
- Explanation: Strong pushback against overconfident universal claims.
- "just because _you_ wouldn't care or know doesn't mean no one else would"
- Explanation: Rebuts overgeneralization in the debate.
- "it should be a legal requirement"
- Explanation: Takes a stronger regulatory stance later in the discussion.

the_laughing_man
- Idea: Defends AI music against accusations of theft and says AI is preferable to unreliable hired musicians in some cases.
- Stance: supportive
- Attitude: dismissive of critics, frustrated
- Evidence:
- "Most of them think it's music theft when it isn't"
- Explanation: Directly rejects the theft framing.
- "I'd rather use AI"
- Explanation: Clear preference for AI over unreliable human contractors.
- "And then these jokers have the gall to complain about AI taking their jobs."
- Explanation: Hostile toward anti-AI critics.
- "Like I said I can copy a style in a DAW and no one has a problem with it but if I do it with Suno or other AI suddenly they start crying about it hurting "real artists"."
- Explanation: Frames anti-AI reaction as inconsistent.

kudagras / apocalypsegamer1 dispute

- Idea: This exchange significantly shaped the thread, escalating from disagreement into mutual accusations.
- Stance: opposed
- Attitude: hostile, personal
- Evidence:
- kudagras: "Then u haven’t worked with it enough"
- Explanation: Challenges the other’s competence.
- apocalypsegamer1: "man can you get your ego checked or something"
- Explanation: Explicitly calls out the other’s behavior.
- kudagras: "Ur a secret anti and we can tell"
- Explanation: Personalizes the disagreement.
- apocalypsegamer1: "I'm half anti yes"
- Explanation: Openly accepts the label and reframes position.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"AI still needs human input and curation. It's more accurate to call the final ouput as a collaborative work than one made purely by AI."
Explanation: This supports the recurring middle-ground view that AI music is collaborative rather than fully autonomous.

Topic: Moderation and Censorship of Lyrics / Adult or Sensitive Content

Description

There is recurring friction over Suno’s moderation system, especially when users want to create adult, explicit, violent, or otherwise edgy songs. Users complain that some words are blocked while others are allowed, that moderation feels inconsistent, and that context is difficult to predict. The contention has both ethical and platform-governance dimensions: some users accept moderation as necessary, while others see it as excessive or arbitrary.

Timeline

- **2024-04-07 00:00:28 - 00:05:10**
- **2024-04-07 03:12:52 - 03:16:54**
- **2024-04-07 03:37:37 - 03:38:40**
- **2024-04-07 08:40:36 - 08:43:37**
- **2024-04-09 03:53:46 - 04:04:09**
- **2024-04-09 11:37:49 - 11:41:02**

Users first ask whether 18+ music or adult language is possible. Community members explain moderation is enforced and discuss workarounds. Later, users compare which profanity is allowed versus blocked and express frustration that words like “sex” get blocked while stronger profanity may pass. The discussion broadens into concerns that moderation blocks dark themes and not just explicit words.

Key Participants

southern_pixel8463
- Idea: Wants to make “18+ music” and use adult language, but says the system blocks it.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "is there any way to make 18+ music? i wanna use adult language in my songs but it never lets me"
- Explanation: Direct complaint about restrictions.

.derbaum.
- Idea: Says moderation exists and is context-sensitive; often explains practical workarounds without denying the system is strict.
- Stance: neutral
- Attitude: explanatory
- Evidence:
- "sure... only the automod of suno will stop you... (its chatgpt moderating)"
- Explanation: Identifies moderation as the limiting factor.
- "its only moderated by chat gpt. it has a context aware content filter... you can swear and stuff, and let sing sexy things. but really hard stuff if flagged for moderation and not generated"
- Explanation: Describes both flexibility and limits.
- "context matters too"
- Explanation: Repeats the key theme that moderation is contextual.

davidanderson3
- Idea: Repeatedly claims profanity can get through, emphasizing inconsistency.
- Stance: critical of moderation consistency
- Attitude: casual, provocative
- Evidence:
- "i got it to say bad words"
- Explanation: Says moderation can be bypassed or is inconsistent.
- "it wont let you mention the word death"
- Explanation: Complains about a specific blocked word.
- "it also doesnt like the bword but you can say the fword 50 times"
- Explanation: Highlights inconsistency between blocked and allowed profanity.

metalxi
- Idea: Asks if paid plans disable moderation.
- Stance: critical / probing
- Attitude: direct
- Evidence:
- "do the paid plans stop the modaration of songs?"
- Explanation: Suggests moderation is burdensome enough that a paid exemption would matter.

phaic

- Idea: As a paid subscriber, believes censorship is heavier than expected and should matter less for paying users.
- Stance: critical
- Attitude: annoyed
- Evidence:
- "if we are paying subscribers it shouldnt matter. i didnt know the censoring was going to be this heavy"
- Explanation: Clear complaint about subscriber experience.

briealt
- Idea: Complains moderation is inconsistent, especially around sexual words versus profanity/violence.
- Stance: critical
- Attitude: frustrated, incredulous
- Evidence:
- "i dont get why the moderation flags the word "sex" but not the words "fuck" and "kill""
- Explanation: Direct inconsistency complaint.
- "take any normal lyrics and insert "sex" anywhere and itll insta deny"
- Explanation: Claims “sex” is categorically blocked.
- "insert "fuck fuck fuck fuck fuck" repeatedly and it wont do anything"
- Explanation: Contrasts that with tolerated profanity.

rick_locker
- Idea: Complains that profanity now seems banned in situations where it previously wasn’t.
- Stance: critical
- Attitude: irritated
- Evidence:
- "It seems that profanity is now banned. Tried to make a song that included the f word three times and it was refused. Removed them all, it generated. Added it in once and it refused again. Very annoying."
- Explanation: Strong complaint about changing moderation behavior.

itsanotter
- Idea: Says moderation especially blocks darker themes rather than only profanity.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "I really wish some of the song moderation filters were relaxed."
- Explanation: Explicit request for looser moderation.
- "It's not a problem with swearing, it's content. It's themes like depression and stuff that flag the most for me."
- Explanation: Expands issue beyond profanity into theme-based filtering.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"If Hasa Diga Eebowai slips the filter then who the hell *knows* what else will."
Explanation: Supports the broader claim that moderation behavior appears inconsistent and unpredictable.

Topic: Theft, Reposting, and Misuse of AI Music by Others

Description

There is noticeable tension around songs being stolen, reposted, or reused by others, especially when users share public links. This includes concern that people can download or redistribute tracks, repost them to YouTube or streaming platforms, and exploit weak discoverability/ownership mechanisms. The discussion touches ethical and quasi-legal concerns around attribution, redistribution, and platform abuse.

Timeline

- **2024-04-06 23:49:00 - 23:50:27**
- **2024-04-07 02:58:54 - 03:08:10**
- **2024-04-09 10:13:21 - 10:30:49**

The issue starts with warnings not to post downloadable MP3s because “it can be download and stole by others.” Later, there is a direct scammer incident involving stolen credit cards. Finally, users discuss specific cases of songs being uploaded by others to YouTube, TikTok, Spotify, and Apple Music.

Key Participants

bangermsuk
- Idea: Warns that posting downloadable MP3s risks theft.
- Stance: critical / cautionary
- Attitude: warning
- Evidence:
- "don't added mp3 here , it can be download and stole by others"
- Explanation: Direct warning about redistribution risk.

furrybeans [Suno Team] / community scam discussion
- Idea: Identifies a scammer trying to sell stolen credit cards.
- Stance: critical
- Attitude: matter-of-fact
- Evidence:
- "Scammer. DM'd me trying to sell me stolen credit cards"
- Explanation: Concrete example of criminal misuse in the community.

ultimatem.
- Idea: Reports that someone uploaded their Suno song to multiple outside platforms.
- Stance: critical
- Attitude: upset, seeking guidance
- Evidence:
- "Hey, guys. In regards to that dude who uploaded my suno song to YouTube, he also uploaded it to tik-tok, Spotify and apple."
- Explanation: Explicit report of unauthorized redistribution.
- "Should I report it to Suno? Or not bother?"
- Explanation: Seeks remedy and indicates distress.

jakeeeeeey

- Idea: Advises reporting unauthorized uploads directly to the platforms.
- Stance: supportive of enforcement
- Attitude: practical
- Evidence:
- "you're better off reporting it to YT and tiktok with proof of ownership"
- Explanation: Direct practical advice on next steps.

bigzoomz.
- Idea: Warns reposting can become a legal issue if monetized.
- Stance: critical
- Attitude: cautionary
- Evidence:
- "Theres a chance he could start banking off it it (making money) then that becomes a legal problem"
- Explanation: Frames reposting as a potentially serious issue.

dreamtrove
- Idea: Says there is a bug/exploit allowing theft of songs and suggests attribution should be harder to strip.
- Stance: critical
- Attitude: analytical
- Evidence:
- "there's a glitch where you can steal songs, i already put that in suggestions."
- Explanation: Claims a specific exploit exists.
- "the simple fix is just to glue the initial creator's username to the front of the song file"
- Explanation: Proposes a remedy tied to attribution.

drakolyr
- Idea: Objects to remix exposing their lyrics/work to easy reuse; later notes others took their cat lyrics.
- Stance: critical
- Attitude: protective, annoyed
- Evidence:
- "why isn't it restricted here? Atleast for paid users. I got some songs were i did a lyrics with many hours and dont want that its remixed."
- Explanation: Wants tighter controls on remixability.
- "Someone took my cat lyrics again XD"
- Explanation: Says their material is being reused by others.

Suno Team Response

jonathanfly
- Says some reports are being taken and asks for details in direct messages.
- Evidence:
- "I sent you DM. We're taking some reports, yeah."
- Explanation: Indicates at least some internal handling of theft/reuse reports.

Additional Evidence (Optional)

"if you share things on discord, other people can hear it too and we cannot protect your from people here."
Explanation: General warning that public sharing reduces control and enables misuse.

Topic: Safety / Child Appropriateness of AI Music Platform

Description

There is a smaller but clear ethical/safety discussion about whether Suno is appropriate for children. The tension is not a direct argument between users so much as a cautious debate about moderation, explicit content, community browsing, and weird thumbnails. The issue is ethically relevant because it concerns child exposure to AI-generated and user-generated content.

Timeline

- **2024-04-07 02:39:52 - 02:46:39**

The discussion begins when a user asks whether it is safe for an 11-year-old to use Suno, specifically worrying about AI responses, song images, and text. Multiple users answer, some saying it seems generally safe, while others note browsing songs by other users could be risky and suggest supervision.

Key Participants

machenergy
- Idea: Wants to know if the platform is safe for an 11-year-old, especially regarding AI outputs and exposure.
- Stance: critical/cautious
- Attitude: concerned
- Evidence:
- "does anyone know if suno is safe to let a child create content with?"
- Explanation: Opens the child-safety issue.
- "it's the ai responses i'm concered over"
- Explanation: Specifically concerned about generated behavior, not just user content.
- "yeah i think i want to supervise this"
- Explanation: Ends with a supervision-oriented conclusion.

kneejaw
- Idea: Says it is generally safe, but browsing user-created content is the main risk.
- Stance: supportive with caveat
- Attitude: calm, reassuring
- Evidence:
- "This should generally be safe for a child to use."
- Explanation: Overall reassuring assessment.
- "Browsing the songs created by other users wold be the only potential risk"
- Explanation: Clearly identifies the limitation/risk area.

.derbaum.
- Idea: Says moderation blocks hard content but still allows some swearing/sexuality, implying partial but not total safety.
- Stance: mixed
- Attitude: explanatory

- Evidence:
- "you can swear and stuff, and let sing sexy things. but really hard stuff if flagged for moderation and not generated"
- Explanation: Shows content is moderated but not entirely sanitized.

cog_of_earth
- Idea: Thinks it seems safe, but would prefer parental controls.
- Stance: supportive with concern
- Attitude: casual
- Evidence:
- "I think it seems safe"
- Explanation: General reassurance.
- "should have a pin and setting to hide explicit songs, like a parental mode"
- Explanation: Concrete suggestion that current safeguards are incomplete.

arctiwolf502
- Idea: Advises caution because of exposure issues and weird thumbnails.
- Stance: cautious
- Attitude: careful
- Evidence:
- "the thumbnails can be really weird sometimes"
- Explanation: Identifies a visible risk in platform output.
- "If it were my kid I'd keep an eye on them for awhile"
- Explanation: Recommends a supervision/probation approach.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"Automically generated lyrics would never be anything offensive."
Explanation: This claim by kneejaw shows the most optimistic interpretation in the thread, but it is counterbalanced by others noting weird thumbnails and explicit user-created content.

Chunk 4: 2024-04-09 to 2024-04-11

Topic: Copyright / Artist Imitation / Ownership Questions

Description

Conflict and repeated friction centered on whether Suno should be used to imitate artists or voices, whether users can monetize outputs, and how ownership works under free vs paid use. Tension appears in several forms:
- users mocking recurring copyright debates: “**copyright time again?**”
- direct pushback against attempts to copy artists’ voices: “**this is not a tool to try to deliberately infringe on copyright**”

- confusion and repeated questions about ownership and monetization
- concern that users are trying to skirt payment or usage restrictions

The discussion evolved from early meta-friction about “copyright” as a recurring, unproductive topic into concrete disputes around:
1. imitating “famous rapper voices,”
2. using copyrighted music or leitmotifs,
3. monetizing songs made on free vs paid plans,
4. whether extending a free-plan song after subscribing changes ownership.

Timeline

- **2024-04-09 11:53:17 - 11:56:15**
- Meta-friction about recurring copyright debates.
- **2024-04-09 12:43:46 - 12:47:18**
- Direct dispute over using “famous rapper voices” and imitating artists.
- **2024-04-09 13:09:52 - 13:13:40**
- Repeated questions about monetization, ownership, and YouTube/shorts revenue.
- **2024-04-09 13:25:57 - 13:26:57**
- Explicit rejection of using leitmotifs from existing music.
- **2024-04-09 13:31:28 - 13:38:23**
- Repeated clarifications on free vs paid ownership, including detailed copy-paste explanation.
- **2024-04-09 13:43:23 - 13:44:01**
- Question about whether deleting free-plan songs is “destruction of their property,” plus comment about training.
- **2024-04-09 14:57:57 - 15:01:42**
- Follow-up conflict about whether extending a free-plan song under paid subscription makes it monetizable.
- **2024-04-09 15:47:28 - 15:47:39**
- Renewed question about parodying a known song “same tune, whole new lyrics.”

Evolution over time
- The logs begin with users already fatigued by recurring copyright talk: “**1 hour of discussion that leads to nowhere**.”
- The discussion then becomes more concrete when a user asks about “**famous rapper voices**,” prompting multiple users to reject artist imitation as copyright infringement.
- Ownership questions intensify as users ask about using tracks on YouTube, Shorts, and Spotify; several community members repeatedly explain that free-plan songs belong to Suno and paid-period songs belong to the user.
- Later, edge cases appear: using leitmotifs from existing songs, extending songs created on the free tier after subscribing, and using parodies based on known tunes.
- Throughout, the tension is mostly between users seeking loopholes or gray areas and users pushing back that Suno is for original music and that ownership terms are strict.

Key Participants

.derbaum.
- Idea: Says copyright discussion is important but often ends badly; repeatedly explains ownership rules for free vs paid songs.
- Stance: neutral
- Attitude: calm, lightly humorous
- Evidence:

- "**copyright time again? lets gooo... 1 hour of discussion that leads to nowhere ■**"
- Explanation: Shows awareness of recurring friction around copyright and a mildly resigned tone.
- "**If you use a free SUNO account to make songs the „Copyright“ belongs to suno... If you have a payed subscription all songs made DURING this payed period fully belong to you.**"
- Explanation: Clear neutral explanation of ownership rules.

hf_rugal
- Idea: Strongly rejects attempts to imitate real artists or voices; repeatedly frames that as infringement. Also explains free-tier ownership limits.
- Stance: critical
- Attitude: firm, admonishing
- Evidence:
- "**this is not a tool to try to deliberately infringe on copyright**"
- Explanation: Direct rejection of using Suno to imitate copyrighted/identifiable artists.
- "**you're trying to find a way to copy a real person's voice**"
- Explanation: Explicitly identifies the issue as copying a person’s voice.
- "**the MUSIC you make when you are not subscribed does not belong to you**"
- Explanation: Firmly states ownership limitation for free-tier output.

lotusancestorxiaweisheng
- Idea: Says artist imitation is not allowed and suggests describing a voice rather than naming artists.
- Stance: critical
- Attitude: practical, matter-of-fact
- Evidence:
- "**You can't imitate artists**"
- Explanation: Direct statement against artist imitation.
- "**Yeah, it doesn't understand artist names so just describe the way thr artist sounds**"
- Explanation: Suggests a workaround that avoids explicit artist naming.

itsthejimjam
- Idea: Frames Suno as a tool for original music rather than copying existing music; also clarifies swearing vs slurs.
- Stance: critical
- Attitude: blunt
- Evidence:
- "**Suno is for making original music not copying other music**"
- Explanation: Concise statement of principle against imitation.
- "**it wont use SLURS if thats what youre trying**"
- Explanation: Reinforces content/ethics boundaries.

johupohe
- Idea: Wants “same beat and same voice” and specifically asks about “famous rapper voices,” then about slurs.
- Stance: supportive of imitation / loophole-seeking
- Attitude: direct, frustrated
- Evidence:
- "**How Do I get the same beat and same voice? Is it possible to get famous rapper voices?**"
- Explanation: Explicitly requests artist-like voice imitation.
- "**Yes**"
- Explanation: Confirms that copying a real person's voice is the goal.
- "**possible to get slurs?**"
- Explanation: Shows further pushing against platform boundaries.

luxuria.unus
- Idea: Clearly summarizes ownership: paid account = user owns, free account = Suno owns.
- Stance: neutral
- Attitude: informative
- Evidence:
- "**The FAQ is your friend, but long story short: You if made with a premium account, Suno's if made with a free account.**"
- Explanation: Neutral summary of the ownership split.

dropbarracuda
- Idea: Repeatedly asks about how to state ownership/claim ownership and later clarifies that extending free songs under paid plans still does not transfer ownership.
- Stance: neutral
- Attitude: persistent, slightly frustrated
- Evidence:
- "**Anyone know if there is a standard boilerplate blurb that can be copy-pasted to sites like YouTube or Spotify to claim ownership of the music you generrate thru Suno with a paid subscription?**"
- Explanation: Shows concern with formal ownership assertion.
- "**It states clearly in the TOS that anything generated on the Free plan (including clips that you extend with a paid subscription) are not owned by the user.**"
- Explanation: Clarifies a key edge case in the ownership debate.

weericky
- Idea: Questions whether deleting free-tier songs could count as destroying Suno’s property.
- Stance: neutral
- Attitude: joking, provocative
- Evidence:
- "**see how the freemium mode songs rights are owned by suno, is deleting a song destruction of their property then?**"
- Explanation: Raises a legal/ownership edge case, even if jokingly.

patapl
- Idea: Asks if leitmotifs from existing music can be used.
- Stance: neutral
- Attitude: curious
- Evidence:
- "**Is it possible to use leitmotifs from existing music? Doesn't really work for me**"
- Explanation: Brings copyrighted musical borrowing into the conversation.

mudnoodle
- Idea: Wants to make a vulgar parody of a known song using “same tune, whole new lyrics.”
- Stance: supportive of derivative reuse
- Attitude: casual
- Evidence:
- "**I wanna do an incredible vulgar parody of Bon Jovis Livin on a Prayer. Same tune, whole new lyrics. Can Suno do that, or does copyright stop that?**"
- Explanation: Explicitly asks about using a known melody with new lyrics.

Suno Team Response

furrybeans [Suno Team]

- No direct policy answer on copyright/ownership in this section, but responds dismissively to off-topic social/political tangents and later clarifies an edge case elsewhere in the log context.
- Evidence:
- "**I'll wait for the Netflix adaptation of that story.**"
- Explanation: This is a light dismissive response to a religion/politics tangent rather than a substantive policy answer.

Additional Evidence (Optional)

"**the songs belong to you if it's made while subscribed**"
Explanation: Repeated community summary of the paid-tier ownership rule.

"**the first answer is 'super no'**"
Explanation: Strong rejection of using existing copyrighted music/leitmotifs.

Topic: AI Music Ownership / Monetization on Free vs Paid Plans

Description

A major point of tension was whether songs made with Suno can be monetized, and under what conditions. Multiple users were confused or frustrated about whether YouTube, Shorts, Spotify, and advertising use were allowed. The conflict is not users directly fighting each other so much as repeated friction caused by unclear or disputed boundaries, especially:
- free tier songs belonging to Suno,
- paid-period songs belonging to the user,
- whether extending a free-tier song while paid changes ownership,
- whether non-monetized uploads are allowed.

Timeline

- **2024-04-09 13:09:52 - 13:13:40**
- User asks if Suno will "steal" YouTube Shorts money; others answer with terms-based ownership explanation.
- **2024-04-09 13:18:31 - 13:19:08**
- Clarification that non-monetized posting is okay.
- **2024-04-09 13:37:49 - 13:38:23**
- Repeated prepared explanation of ownership terms posted.
- **2024-04-09 13:47:27 - 13:54:30**
- More questions about whether Discord Nitro counts, whether past songs become owned after subscribing.
- **2024-04-09 14:57:57 - 15:01:42**
- Specific edge case: free-generated song extended during a paid period.
- **2024-04-09 18:30:57 - 18:31:31**
- Another monetization question about YouTube and subscription period.

Evolution over time
- The discussion starts with direct practical concern: "**Will suno ai steal my yt shorts money**".

- Community members consistently explain that ownership depends on subscription status at the time of creation.
- Confusion persists because users ask about adjacent cases: Discord Nitro, non-monetized uploads, extending old songs, and whether “the full song” becomes theirs after paying.
- Over time, the answers become more standardized, including a prepared copy-paste explanation by `.derbaum.` that others repeat or translate.

Key Participants

megazesez
- Idea: Wants to know whether YouTube Shorts monetization is safe without subscription.
- Stance: supportive of monetization
- Attitude: urgent, insistent
- Evidence:
- "**Will suno ai steal my yt shorts money if I use their audio in yt shorts?**"
- Explanation: Direct monetization concern.
- "**So the money from shorts would be mine right? RIGHT??**"
- Explanation: Repeated urgency and insistence.

hf_rugal
- Idea: Explains that unsubscribed users do not own the music and subscribers do.
- Stance: neutral
- Attitude: firm
- Evidence:
- "**then what you make doesn't belong to you, read the TOS**"
- Explanation: Direct ownership clarification.
- "**if you subscribe it belongs to you**"
- Explanation: Clear paid-tier rule.

yukkurioniisan
- Idea: Says unsubscribed output will be claimed by Suno; also shares ownership explanation in another language.
- Stance: neutral
- Attitude: informative
- Evidence:
- "**Then it will be claimed by suno**"
- Explanation: Confirms free-tier ownership by Suno.
- Vietnamese block explaining free vs paid ownership.
- Explanation: Repeats policy in translated form.

Deleted User
- Idea: Asks whether posting on YouTube without monetization is okay if they credit Suno.
- Stance: neutral
- Attitude: cautious
- Evidence:
- "**what if I post it on YouTube and I have mentioned made with Suno AI. I'm not goin to make money but just release it, is that okay?**"
- Explanation: Asks about acceptable non-commercial use.

luxuria.unus
- Idea: Clarifies that Discord Nitro is unrelated and only Suno premium matters.
- Stance: neutral

- Attitude: precise
- Evidence:
- "**Discord Nitro has nothing to do with it, it has to be their premium service.**"
- Explanation: Corrects confusion about subscription type.

ductamshop
- Idea: Repeatedly asks who owns music and what happens on YouTube.
- Stance: neutral
- Attitude: confused
- Evidence:
- "**Who owns the music copyright, and what will happen if I upload it to Youtube**"
- Explanation: Opens direct ownership question.
- "**So that means when I upgrade Nitro every month, that music belongs to me and I can do anything with it, right?**"
- Explanation: Confusion between Discord Nitro and Suno subscription.

karkarias5207
- Idea: Asks if free-generated song extended under paid plan can be used for advertising.
- Stance: supportive of loophole / edge-case monetization
- Attitude: persistent
- Evidence:
- "**If i generate a song during the free plan, buy the pro plan and extend that song, will i get to use it for advertising?**"
- Explanation: Direct ownership loophole question.
- "**But i only use the extended part of the song. 30 seconds of it**"
- Explanation: Attempts narrower workaround.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"**If you have a payed subscription all songs made DURING this payed period fully belong to you.**"
Explanation: Most complete ownership explanation in the logs.

"**If you use a free SUNO account to make songs the „Copyright“ belongs to suno.**"
Explanation: Confirms free-tier ownership.

Topic: Moderation / Content Filtering for Violent, Sexual, or Sensitive Lyrics

Description

There is repeated tension over moderation of lyrics, especially when users feel innocuous or contextually acceptable words are blocked. This is highly relevant to ethical and platform-governance

issues. Users complain that:
- violent lyrics are rejected even without slurs or sexual content,
- sexual lyrics are too heavily filtered,
- some prompts are inconsistently flagged,
- users try to evade moderation via phonetic spellings or homophones.

Timeline

- **2024-04-09 12:16:21 - 12:17:04**
- User asks if violent text is allowed; other users say the gatekeeper is “pretty PG.”
- **2024-04-09 12:29:24 - 12:29:53**
- User asks how to get swear words.
- **2024-04-09 12:46:34 - 12:47:18**
- Questions about slurs; several users push back.
- **2024-04-09 13:50:09 - 13:51:37**
- Complaint that explicit Finnish thrash metal lyrics are blocked.
- **2024-04-09 14:38:35 - 14:42:04**
- Another blocked violent lyric example; others suggest homophones and identify “implied cannibalism.”
- **2024-04-09 17:04:19 - 17:05:11**
- User notes moderation inconsistency: same prompt blocked once, accepted next time.
- **2024-04-09 18:23:43 - 18:26:48**
- More complaints about sexually explicit / gangster rap terms being blocked.
- **2024-04-10 03:27:18 - 03:29:24**
- More users ask what words trigger moderation and are told to ask ChatGPT.

Evolution over time
- The topic begins with a user asking whether “**violent**” content is also disallowed.
- Users explain that moderation is driven by another model and is “**pretty PG**”.
- The conflict broadens into swearing, slurs, explicit sex, and heavy metal / horror lyrics getting blocked.
- Several users discuss workarounds like phonetic misspellings and homophones.
- The tone repeatedly turns frustrated because moderation feels inconsistent: the same or nearly same text can be blocked one time and allowed another.

Key Participants

occhiodiagamotto
- Idea: Violent but non-sexual, non-slur lyrics are getting refused.
- Stance: critical
- Attitude: confused
- Evidence:
- "**it doesnt have any sexual reference or slurs but the text is kinda violent, is that also not allowed on suno**"
- Explanation: Direct complaint about overbroad moderation.

tumeden
- Idea: Says moderation is handled by ChatGPT and is “pretty PG.”
- Stance: critical of strictness
- Attitude: matter-of-fact
- Evidence:
- "**It's gatekeeper is chatgpt which is pretty PG**"
- Explanation: Attributes strict moderation to another AI gatekeeper.

johupohe
- Idea: Wants swearing and slurs.
- Stance: supportive of bypassing moderation
- Attitude: blunt
- Evidence:
- "**we cant swear aswell?**"
- Explanation: Direct complaint.
- "**possible to get slurs?**"
- Explanation: Directly asks for prohibited content.

itsthejimjam
- Idea: Says swearing is okay but slurs aren't.
- Stance: neutral
- Attitude: direct
- Evidence:
- "**Suno can swear**"
- Explanation: Distinguishes swearing from slurs.
- "**it wont use SLURS if thats what youre trying**"
- Explanation: Clarifies moderation boundary.

jzonedoc
- Idea: Thinks moderation is too strict for explicit Finnish thrash metal.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "**is it really necessary to prevent that?**"
- Explanation: Direct objection to moderation on explicit lyrics.

hapythots
- Idea: Says zombie/bug horror wording keeps getting flagged even after rewrites.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "**I've rewritten it like a hundred times and it just won't take it.**"
- Explanation: Shows repeated friction with moderation.

eternyti
- Idea: Says the filter interprets the lyrics as cannibalism, even if that's not intended.
- Stance: neutral
- Attitude: explanatory
- Evidence:
- "**Implied cannibalism, the filter doesn't like that**"
- Explanation: Gives a text-grounded explanation of why the moderation may trigger.

schnex
- Idea: Complains that ChatGPT-style moderation is prudish on sexual content.
- Stance: critical
- Attitude: mocking
- Evidence:
- "**It's like we're back in the 50s and have to use euphemisms like flower for vagina or whatever lol**"
- Explanation: Open criticism of conservative moderation.

endymion5355
- Idea: Calls the restrictions “idiotic” and mentions bypass methods.
- Stance: critical
- Attitude: irritated
- Evidence:
- "**yeah, it's idiotic...**"
- Explanation: Direct negative judgment on restrictions.
- "**There were ways to bypass the ethical restrictions on AI**"
- Explanation: Mentions bypassing moderation.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"**Ask chatgpt, ai probably knows why ai is upset**"
Explanation: Shows how users view moderation as externalized to another system rather than a transparent Suno rule list.

"**I clicked "Create". Got "flagged for moderation". I clicked "Create" again without changing anything. I got songs.**"
Explanation: Strong evidence of perceived moderation inconsistency.

Chunk 5: 2024-04-11 to 2024-04-13

Topic: Moderation/Censorship of AI-Generated Song Content

Description

A repeated point of tension in the logs is users objecting to Suno’s moderation/censorship system when it blocks lyrics or prompts they consider harmless, inconsistent, or overly restrictive. This contention is directly tied to ethical/moral/legal handling of generated content because users challenge what kinds of violent, sexual, profane, or otherwise sensitive content AI music generation should permit.

The discussion appears in multiple clusters and evolves from isolated complaints about flagged words into broader criticism of the moderation system’s inconsistency and opacity. Early on, users complain that specific words or harmless prompts are blocked while seemingly similar wording passes. Later, users explicitly ask whether there are “flagged words,” whether repeated moderation hits risk account consequences, and whether the moderation is context-based rather than word-based. Toward the end, frustration grows into stronger criticism of “censorship,” while other users defend the filtering as necessary.

Timeline

- **2024-04-11 04:36:13–05:18:37**
- **2024-04-11 04:50:11–05:15:33**

- **2024-04-11 05:15:33–05:18:37**
- **2024-04-11 08:16:17–08:25:56**
- **2024-04-11 08:29:39–08:34:14**
- **2024-04-11 15:15:33–15:18:01**
- **2024-04-11 20:16:17–20:34:14**
- **2024-04-12 01:57:03–02:00:18**
- **2024-04-12 14:59:47–15:00:48**
- **2024-04-12 16:20:51–16:24:17**
- **2024-04-12 17:16:54–17:20:48**
- **2024-04-12 20:14:16–20:23:00**
- **2024-04-13 11:58:31–11:59:27**

The discussion evolves from users reporting specific blocked prompts like “Potion Seller,” gore lyrics, or rap lyrics with profanity, into attempts to reverse-engineer the moderation logic. Other users increasingly describe it as concept-based rather than word-based, and some suggest workarounds such as altering spelling or asking ChatGPT why something was flagged. By later messages, some users call the moderation “schizophrenic,” “too sensitive,” or complain that it is getting stricter over time, while others argue the filter is acceptable, necessary, or simply part of using the service.

Key Participants

fauxpaw
- Idea: Repeatedly argues that moderation is blocking harmless or meme-based content without clear reason, especially around the “Potion Seller” text and role labels.
- Stance: critical
- Attitude: frustrated, confused
- Evidence:
- "Why does so much stuff get flagged for moderation? I'm just trying to make Potion Seller into a thing"
- Explanation: This is a direct complaint that moderation is overblocking benign content.
- "When I take off the [Voice 1] and [Voice 2] from the lines it says it's being moderated. Why??? It's so harmless."
- Explanation: Shows repeated frustration and that the issue persists across attempts.
- "I can't handle Suno's strongest potions.."
- Explanation: Keeps the same disputed topic active, showing continued engagement with the moderation issue.

zelkso
- Idea: Complains that lyrics with gore are being flagged even though they do not think the content is severe.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "why cnat i make a song that may include some gore-like lyrics"
- Explanation: Explicit objection to moderation boundaries on violent content.
- "My lyrics are getting flagged for moderation but I don't see much wrong with it other than some gore"
- Explanation: Confirms the problem is specifically about content moderation.
- "these songs people are making are wildly good in ai"
- Explanation: Shows they remain engaged in the tool while still objecting to moderation.

.lulzifer
- Idea: Wants transparency about what gets flagged and criticizes the lack of documentation in the FAQ.

- Stance: critical
- Attitude: frustrated, inquisitive
- Evidence:
- "Does anyone know, where one can find a list of words that are flagged for moderation"
- Explanation: Directly asks for a formal list of banned or flagged terms.
- "there is nothing in the FAQ about this"
- Explanation: Criticizes the lack of official guidance.
- "Writing rap lyrics that won't get flagged for moderation is like tiptoeing through the tulips at the moment."
- Explanation: Indicates the moderation friction is recurring enough to shape creative behavior.

socialnetwooky
- Idea: Argues the moderation is based on concepts/context more than exact words, and suggests there is not a strict strike system since they themselves are still present.
- Stance: neutral
- Attitude: explanatory, slightly sarcastic
- Evidence:
- "it's not 'words' but concepts really"
- Explanation: Offers a theory of how moderation works, shifting discussion from words to semantic context.
- "If you use fuck in a sexual context you'll probably get flagged"
- Explanation: Gives a specific example supporting the “context-based” interpretation.
- "if there was I'd not be here ■"
- Explanation: Responds to concern about a strike policy by implying repeated flags have not led to removal.

slobo777
- Idea: Says there is likely some human review or secondary process beyond the AI moderation, and warns users that repeated filter hits may be viewed negatively.
- Stance: neutral
- Attitude: cautious, explanatory
- Evidence:
- "There's *probably* a flag on moderation queue if you hit the filter a lot."
- Explanation: Suggests escalation beyond automatic filtering.
- "Humans are more discerning than the AI moderation"
- Explanation: Frames moderation as partly human-reviewed.
- "Take care,. Sort of thing that will be could be viewed negatively by the company"
- Explanation: Warns that trying to work around moderation repeatedly could have consequences.

boggers
- Idea: Reports repeated moderation hits and infers that non-consensual sexual framing triggers the filter.
- Stance: critical
- Attitude: analytical, frustrated
- Evidence:
- "i've had lyrics flagged way more than 3 times"
- Explanation: Confirms repeated moderation friction.
- "i'm pretty sure there is heavy moderation around non-consentual sex"
- Explanation: Tries to identify what the system is targeting.
- "it was fine until I started adding lyrics like 'you cant fight it' or 'theres nothing you can do' ... then it got flagged"
- Explanation: Gives a concrete before/after example to support the interpretation.

fantasticrod
- Idea: Worried that repeated moderation hits could lead to account penalties, and later asks whether an uncensored version of Suno could exist.
- Stance: critical
- Attitude: worried, frustrated
- Evidence:
- "i got scared becasue it kept flagging my shit for moderation I was worreid I would get banned"
- Explanation: Shows concern not just about blocked content but possible punishment.
- "do you guys think there will be an unsensored suno someday I have song ideas that are currently censored"
- Explanation: Broadens the issue into whether Suno should have fewer restrictions.

.qualia.
- Idea: Not directly about moderation itself, but their comments about making alternate accounts after frustration with the plan intersect with policy evasion concerns raised by others.
- Stance: critical
- Attitude: angry, confrontational
- Evidence:
- "fuck it I"ll just make another accoutn to get free tokeins aside from my main account"
- Explanation: Shows willingness to route around platform restrictions.
- "i wouldn't do it if they didn't have a bad buisness plan"
- Explanation: Frames rule-evasion as retaliation for policy dissatisfaction.

not_riley
- Idea: Argues moderation has become more restrictive over time and gives an example where even mildly profane wording used to work but no longer does.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "the censorship on these ai programs like suno and midjourney seems to get more and more restrictive with time."
- Explanation: Broadens the issue into a trend of tightening censorship.
- "it keeps flagging it for moderation. However the word 'fuck' works just fine...makes perfect sense."
- Explanation: Complains about inconsistency in what is blocked.

jameson_odc
- Idea: Wants user-level control over moderation sensitivity and is frustrated that fairly silly lyrics are blocked.
- Stance: critical
- Attitude: frustrated, inquisitive
- Evidence:
- "Is there any way to change the sensitivity settings on whatever moderation flag is being used in this system on my personal profile?"
- Explanation: Directly asks for more user control over content filtering.
- "a song about a 'bone monster' ... and it keeps saying it's somehow inappropriate?"
- Explanation: Shows that even comedic horror content can trigger moderation unexpectedly.

Suno Team Response

patsuno [Suno Team]
- Asked for concrete examples of prompts that used to work and no longer do, indicating active follow-up on reports of prompt/malformed filtering issues.

- Evidence:
- "thanks for this, mind sending me a few examples of the kinds of prompts that used to work for you and don't now?"
- Explanation: This is a direct response to user complaints about prompt handling/moderation behavior.

gkucsko [Suno Team]
- No response from Suno team in the logs specifically clarifying moderation policy on this topic.
- Evidence:
- No direct moderation-policy clarification found from this team member in the cited discussion windows.
- Explanation: Team presence exists elsewhere in the logs, but not with a substantive response to moderation rules here.

Additional Evidence (Optional)

"someone said in here that distrokid is a rip. lots of extra charges"
Explanation:
This is adjacent policy frustration but not enough on its own to classify as an AI-music ethics/legal conflict unless tied back to rights or moderation.

Topic: Theft, False Claims, and Ownership of AI-Generated Songs

Description

A major recurring conflict concerns whether songs made with Suno can be stolen, falsely claimed, reuploaded, or monetized by others, and what users can do about it. This is an ethical/legal tension because users discuss ownership, copyright claims, content ID systems, watermarking, distribution, and enforcement.

The topic begins when a user says their cat song was claimed by someone else on YouTube, then expands into a larger discussion about false claims, content ID, distributors, silent watermarks, whether to upload publicly, and how paid vs free plans affect rights. The tension intensifies because one user reports an actual theft case across YouTube and Spotify, while others debate how much protection exists and whether public sharing is risky.

Timeline

- **2024-04-11 05:41:48–05:46:59**
- **2024-04-11 05:49:53–05:56:37**
- **2024-04-11 11:17:33–12:15:37**
- **2024-04-11 12:20:21–12:30:07**
- **2024-04-11 13:12:46–13:19:43**
- **2024-04-11 15:03:43–15:11:28**
- **2024-04-11 21:37:18–21:44:04**

The discussion starts with one concrete report: a user says someone claimed their cat song and that YouTube is processing the dispute. Others react with sympathy, call the theft “fucked up,” and share

experiences of false claims, stolen videos, and watermarking tactics. Later, users discover the song has also been distributed to Spotify and other platforms, escalating the issue from one YouTube claim to broader cross-platform theft. This evolves into practical discussion about content ID, distributors, proof of authorship, and the distinction between rights on free vs paid songs.

Key Participants

drakolyr
- Idea: Reports that their cat song was stolen and falsely claimed on YouTube/Spotify, says they have proof, and discusses actions taken through takedowns and distributors.
- Stance: critical
- Attitude: upset, determined
- Evidence:
- "Whoever claimed my cat song, Youtube is on it"
- Explanation: Introduces the ownership dispute.
- "Yup. Someone named 'Aurora Serenade'."
- Explanation: Identifies the alleged claimant.
- "I document everything and said to Youtube its mine."
- Explanation: Shows active dispute and evidence-based defense.
- "Now i have reported him on every plattform."
- Explanation: Indicates the issue escalated across services.
- "Someone stole my cat song haha"
- Explanation: Repeats the complaint later, confirming it remained a live issue.

tumeden
- Idea: Reacts to the theft as morally wrong and says this is why they avoid public sharing unless content comes from their own channel.
- Stance: critical
- Attitude: supportive, concerned
- Evidence:
- "That's kinda fucked up if someone just yoinked it."
- Explanation: Directly condemns the theft.
- "Big reason why i dont share much publicly unless its straight from my channel."
- Explanation: Connects the theft issue to changed sharing behavior.

edin4048
- Idea: Shares related experiences with false claims, including licensed songs and stolen videos, showing that platform claiming systems are unreliable and burdensome.
- Stance: critical
- Attitude: matter-of-fact, frustrated
- Evidence:
- "I've licensed actual songs.... and gotten claims for covers.."
- Explanation: Shows false claims can happen even with licensed material.
- "The best one was KIDZ BOP claiming they owned the original song I had licensed"
- Explanation: Strong example of absurd claims.
- "Once a week I have to send out several strikes/take downs for stolen videos"
- Explanation: Connects the issue to repeated platform abuse.

kittycakes19
- Idea: Wants to watermark content and says people steal hard work without credit.
- Stance: critical
- Attitude: protective, frustrated

- Evidence:
- "i am gonna watermark mine"
- Explanation: Shows protective response to theft risk.
- "hate when people like to steal other people hard work and not give credit"
- Explanation: Direct moral condemnation.

dreamtrove.
- Idea: Is wary of posting Suno links because of theft and false IP claims, and comments repeatedly on the cat-song theft.
- Stance: critical
- Attitude: wary, reflective, at times joking
- Evidence:
- "cat got 400k views so someone copied it and is claiming it's his"
- Explanation: Summarizes the theft incident.
- "I don't want it stolen actually."
- Explanation: Shows concern shaping their own behavior.
- "If I post a suno link it's something i'm not planning on using"
- Explanation: Indicates they strategically avoid public posting of work they value.

lwkey03
- Idea: Encourages preventative distribution and points out cross-platform theft.
- Stance: critical
- Attitude: supportive, practical
- Evidence:
- "someone distributed your song"
- Explanation: Helps escalate awareness of the theft.
- "that dude distributed it everywhere - https://open.spotify.com/track/..."
- Explanation: Confirms broader misuse.
- "maybe in the future with updates suno can recognise the copyright holders"
- Explanation: Suggests future platform-side protection.

wetcircuit
- Idea: Frames the thief as foolish and notes that even small profit would have made a subscription affordable.
- Stance: critical
- Attitude: sarcastic, dismissive toward the thief
- Evidence:
- "Crooks is not the smartest peoples."
- Explanation: Mocks the alleged thief.
- "if they could make $10 off a stolen song they could afford the subscription...."
- Explanation: Sarcastically critiques the theft.

Suno Team Response

kneejaw [Suno Team]
- Clarifies that paid plans grant commercial rights, while users always own lyrics they wrote themselves.
- Evidence:
- "With a paid plan, you will have commercial rights for the music you generate."
- Explanation: Direct official statement on rights.
- "You own the copyright to any __ lyrics__ you write yourself, even with a free plan"
- Explanation: Distinguishes music-generation rights from lyric authorship.

kneejaw [Suno Team]
- Clarifies that upgrading later does not retroactively grant rights to songs made on the free plan.
- Evidence:
- "No. Songs generated before you upgrade are not covered."
- Explanation: Important limitation in Suno’s position on ownership and commercial use.

patsuno [Suno Team]
- No direct response from Suno team in the logs to the theft/cat-song claim itself.
- Evidence:
- No direct takedown or dispute-handling response found from Suno team to the theft report.
- Explanation: The team addressed rights generally, but not the specific theft incident in these logs.

Additional Evidence (Optional)

"Maybe you can silent watermark it.. i consider it, thanks!"
Explanation:
Shows users discussing technical self-protection strategies in response to theft concerns.

Topic: Whether AI Music Creation is Legitimate Art or “Junk Data”

Description

A sustained conflict appears around whether AI-generated songs are meaningful creative expression or low-value “junk,” and whether making songs “just to make a song” is legitimate. This is ethically/morally tied to AI music because the disagreement is about the artistic value and purpose of generated works, not just functionality.

The sharpest exchange is driven by one user who questions the purpose of AI-made songs and repeatedly tells others they are “not a song maker,” prompting pushback from multiple users who defend making songs for enjoyment, self-expression, or personal meaning. Later in the logs, other users revisit broader concerns about whether AI is replacing music work, reducing meaning, or flooding the space with low-value output.

Timeline

- **2024-04-11 05:41:28–05:47:23**
- **2024-04-11 07:00:48–07:18:46**
- **2024-04-11 07:29:17–07:35:35**
- **2024-04-11 10:54:27–10:56:50**
- **2024-04-11 12:30:30–12:31:43**

The discussion starts as one user questions the purpose behind AI-generated songs and rejects “I made a song to make a song” as invalid. Others answer that they create for personal enjoyment, self-expression, or video accompaniment, and they object to having to justify creation. The debate later widens into claims that AI feeds “junk data” into the system and concerns about replacing some lower-end production or session work. Another user strongly counters that business users care about deliverable quality, not whether AI was involved.

Key Participants

alexa_thejumpingjellybean
- Idea: Repeatedly argues that songs should have a meaningful purpose beyond simply existing, criticizes AI song creation as “junk data,” and questions whether people are real creators if they make songs without a larger reason.
- Stance: critical
- Attitude: confrontational, dismissive
- Evidence:
- "they never say what is the purpose of it, what did you try to accomplish ?"
- Explanation: Opens the legitimacy challenge.
- "thats not a purpose"
- Explanation: Rejects another user’s answer.
- "the point of making a song for 'it existing' noone ever real in music ever does."
- Explanation: Explicitly denies legitimacy to some AI music making.
- "rest is junk data"
- Explanation: Frames much AI-generated output as worthless.
- "music its supposed to influence people to do some good in the world"
- Explanation: States a moral criterion for artistic worth.

beepboop7723
- Idea: Defends AI song creation as valid when it serves personal enjoyment, self-expression, and acceptance.
- Stance: supportive
- Attitude: calm, earnest
- Evidence:
- "The purpose I have is to create something I'll enjoy myself. Sharing it with others makes me feel accepted."
- Explanation: Gives a clear alternative creative rationale.
- "The point of creation is to make something you desire."
- Explanation: Explicit defense of self-directed creation.
- "If you're purely creating something for others, you'll definately fail."
- Explanation: Pushes back on externally imposed standards.

enchantedechoesprod
- Idea: Rejects the demand that creators justify themselves and pushes back against being labeled as AI or invalid.
- Stance: supportive
- Attitude: confrontational, defensive
- Evidence:
- "Why would anyone have to justify them making a song to you anyway?"
- Explanation: Directly opposes the gatekeeping.
- "Im an AI? cause I dont value your opinion?"
- Explanation: Responds sharply to being called AI by another user.

natebrown351
- Idea: Says they create songs with personal meaning and for fun, sometimes using ChatGPT structurally but revising for their own purposes.
- Stance: supportive
- Attitude: relaxed, sincere
- Evidence:

- "I don't intend to make any profit from these songs, I just do these for fun"
- Explanation: Defends hobbyist use.
- "I'm a guy who puts meaning to songs"
- Explanation: Counters the claim that AI music lacks meaning.
- "I write stuff that has personal meaning to me"
- Explanation: Supports legitimacy through personal authorship and emotional content.

_erisi
- Idea: Offers a more nuanced view that AI is useful and faster, may change lower-end production/sync work, but is not replacing proper production.
- Stance: neutral
- Attitude: thoughtful, pragmatic
- Evidence:
- "it’s taking a lot of music for sync work out"
- Explanation: Notes a labor-market effect.
- "it’s not replacing proper production - tho it might cut a few session musos out of any royalty"
- Explanation: Balances concern with limitation.
- "It’s a lot faster. And I don’t have time for some of these songs to do full productions."
- Explanation: Defends practical value.

aschubert
- Idea: Strongly asserts that business users care about final output quality, not whether AI was used, and dismisses “AI haters.”
- Stance: supportive
- Attitude: assertive, dismissive of critics
- Evidence:
- "In the business world no one cares if you used AI or not. All that matters is if the final deliverable is of high enough quality."
- Explanation: Frames legitimacy in terms of output quality.
- "These AI haters will find they have less and less company over the coming months and years."
- Explanation: Directly pushes back against anti-AI positions.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"_thinks all of you are the 'untitled documents'_"
Explanation:
This line from alexa_thejumpingjellybean reinforces their contemptuous framing of other users’ AI songmaking as faceless, low-value output rather than meaningful art.

Topic: Rights, Monetization, and Licensing of Free vs Paid Suno Songs

Description

A recurrent legal contention concerns what rights users have over songs created on free versus paid plans, whether older songs become commercializable after upgrading, and whether paying users should retain daily credits or get better terms. This is clearly a legal/business issue tied to AI music use.

The tension comes not only from users asking for clarification but also from disagreement and complaints about the fairness of the subscription model and the inability to retroactively commercialize free-plan songs. This leads to some users threatening workarounds like multiple accounts.

Timeline

- **2024-04-11 08:27:44–08:33:52**
- **2024-04-11 09:04:13–09:15:49**
- **2024-04-11 11:21:40–11:40:35**
- **2024-04-11 12:06:41–12:15:37**
- **2024-04-11 13:36:01–13:40:11**
- **2024-04-11 14:25:50–14:35:45**
- **2024-04-12 18:16:13–18:18:13**
- **2024-04-12 22:38:31–22:41:59**

The discussion begins with users complaining that paid plans lose the free daily-credit benefit and may even feel like “less songs” than free use. Team/community responses clarify that paid songs carry commercial rights while free songs do not, and that those rights are not retroactive. Later, users ask about retention of rights after canceling subscriptions, and team/community answers say the commercial license “sticks” to songs created while subscribed.

Key Participants

.qualia.
- Idea: Complains that paid plans feel like a ripoff because daily free credits stop, making paid use seem worse if the user only cares about quantity.
- Stance: critical
- Attitude: angry, confrontational
- Evidence:
- "I paid for a plan any don't get daily credits anymore, its a rip off"
- Explanation: Direct criticism of the plan structure.
- "im saying its a bad playment plan if you get less songs than free"
- Explanation: Explicitly frames the issue as unfair value.
- "fuck it I"ll just make another accoutn to get free tokeins"
- Explanation: Escalates into intended workaround/evasion.

socialnetwooky
- Idea: Defends the business logic and emphasizes that paid plans matter for monetization rights.
- Stance: supportive
- Attitude: blunt, pragmatic
- Evidence:
- "you don't have any rights on the free songs"
- Explanation: States the legal distinction clearly.
- "not if you want to use the songs in any way that might count as monetized"
- Explanation: Re-emphasizes the commercial-use difference.

- "I think you have some misconception forWHOM a businessplan is...it's for the company, not the customer"
- Explanation: Defends the company’s pricing structure in business terms.

onlytrance
- Idea: Complains that paid version should finish whole songs and is too expensive in some currencies, but is willing to pay for better completion.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "I can pay more, but it needs to finish whole song"
- Explanation: Expresses dissatisfaction with current paid offering.
- "It is too expensive for us because of exchange rate of dollar."
- Explanation: Raises affordability as a practical grievance.

paulvern
- Idea: Dislikes the extend-based workflow even after paying because songs still cut off and extension is awkward.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "I bought a pro subscription and I hoped the length of the song would be longer. Why is still limited to 2 minutes?"
- Explanation: Shows mismatch between paid expectations and actual feature limits.
- "It's terrible to extend it"
- Explanation: Strong criticism of the practical user experience.

missbabyvee
- Idea: Asks whether free-plan songs can somehow later gain commercial rights after subscribing.
- Stance: neutral
- Attitude: curious
- Evidence:
- "if you made a song using the free plan and fell in love with it, is there ANY way to still own commercial rights?"
- Explanation: Highlights uncertainty around retroactive rights.

Suno Team Response

kneejaw [Suno Team]
- Clarifies the central rights policy: paid plans grant commercial rights for songs generated while subscribed; lyrics written by the user remain theirs; and rights are not retroactive.
- Evidence:
- "With a paid plan, you will have commercial rights for the music you generate."
- Explanation: Core official rights statement.
- "No. Songs generated before you upgrade are not covered."
- Explanation: Directly addresses retroactivity.
- "No, subscribing does not grant you retroactive commercial rights to content generated as a free user."
- Explanation: Reinforces the same policy elsewhere.

jonathanfly

- Clarifies that free and paid currently use the same model quality and that paid plans mainly differ in credits and access/testing at times.
- Evidence:
- "The free and paid versions are currently 100% the same."
- Explanation: Important clarification in a rights/pricing discussion.
- "Both free and paid plans have the same time limit."
- Explanation: Limits paid-plan expectations about song length.

Additional Evidence (Optional)

"the commercial license 'sticks' with the song."
Explanation:
This clarifies that songs created while subscribed remain commercially usable after cancellation, which resolves one recurring user concern.

Chunk 6: 2024-04-13 to 2024-04-16

Topic: Free-Credit Scam Links and Account/Credit Fraud Claims

Description

A sustained tension formed around scam or fraudulent ways of getting Suno credits, including fake “free credits” offers, suspicious sites, and confusion over unexpected credits or account changes. The discussion stayed tied to ethical and security issues because users repeatedly warned that only official team giveaways are legitimate and criticized promotion of hacks/scams.

The contention evolved in two phases on 2024-04-13:

1. **Direct warning about scam credit offers and suspicious sites**
Users repeatedly called a posted offer/site a scam and warned others not to enter passwords or believe in “free credits.” The conversation included frustration over why the promoter was not banned and criticism of people who repost scam screenshots instead of reporting them.

2. **Follow-up confusion after Suno itself gave bonus credits**
Later, after an outage/compensation event, several users were confused by suddenly having “550 credits” or account/profile changes, with at least one user fearing hacking. Others clarified these were a thank-you from Suno for complications, which partially reduced tension, though suspicion and anxiety lingered.

There is also a smaller related policy/legal edge in users discussing whether fake “free credit” claims or hacking-like methods exist at all. The strongest consensus in the logs is that there is **no legitimate free-token method except official giveaways**.

Timeline

- **2024-04-13 13:35:19 - 13:43:24**
- **2024-04-13 15:07:29 - 16:02:10**

- **2024-04-13 16:05:59 - 16:08:41**

Evolution over time
- The topic begins with a user asking “Is the not scam???” and quickly turns into multiple users labeling a “free credits” offer/site as fraudulent.
- Community members reinforce that no free token method exists except official team giveaways.
- Tension escalates when a user asks why the suspected scam promoter has not been banned and another warns the community not to spread scam screenshots.
- Later, when many users suddenly receive 500 extra credits, confusion shifts from “this is a scam” to “was I hacked?” and “who added these credits?”
- The later messages partially resolve the confusion by explaining the extra credits were a Suno thank-you for service issues.

Key Participants

jordyos
- Idea: Repeatedly states the supposed free-credit/hack offer is a scam and rejects the accusation that Suno itself is scamming.
- Stance: critical
- Attitude: blunt, dismissive
- Evidence:
- "scam"
- Explanation: This is a direct condemnation of the offer as fraudulent.
- "bro thats a scam lol might as well say free robux"
- Explanation: Compares the offer to a common fake online reward scam, reinforcing skepticism.
- "i don't scam lol but its easy to see that screenshot is either a scam or a meme"
- Explanation: Distinguishes himself from the accusation while still insisting the material is not legitimate.

bornagainpenguin
- Idea: States clearly that there is no legitimate way to get free tokens except from the Suno team.
- Stance: critical
- Attitude: firm, matter-of-fact
- Evidence:
- "There is no way to get free tokens unless the Team give them out."
- Explanation: This is the strongest explicit rule stated in the logs against unofficial free-credit methods.

wetcircuit
- Idea: Warns that suspicious free-credit/password schemes are unsafe and pushes people toward reporting scams rather than reposting them.
- Stance: critical
- Attitude: cautionary, frustrated
- Evidence:
- "I definitely would NOT put my password into that thing..."
- Explanation: Direct warning that the site/request is unsafe.
- "don't advertise or screenshot scam shit. report them to the devs if there is actually something you wanna do - but don't try to confuse the community with this."
- Explanation: Frames reposting scam material as harmful to the community and redirects action toward reporting.

aliceruneheart

- Idea: Strongly condemns the scam site, frames it as trying to hack Suno credits, and questions why the promoter is not banned.
- Stance: critical
- Attitude: frustrated, accusatory
- Evidence:
- "This guy is advertising for a scam site that promotes hacking in credits through suno servers to give users free credits."
- Explanation: Explicitly links the site to fraudulent and unethical conduct.
- "Why are they not banned yet?"
- Explanation: Shows frustration and escalation toward moderation action.
- "Nah nah. I'm just mesing around. I have no idea what's up with this guy honestly."
- Explanation: Softens a prior claim, showing some uncertainty about the exact situation while maintaining suspicion.

graph1ks
- Idea: Tells users not to spread scam material and instead report it properly.
- Stance: critical
- Attitude: corrective, irritated
- Evidence:
- "don't advertise or screenshot scam shit. report them to the devs if there is actually something you wanna do - but don't try to confuse the community with this."
- Explanation: Reinforces community-protection framing and objects to amplifying scam content.

Deleted User
- Idea: First expresses uncertainty about whether something is a scam, later asks for links and then says unexpected changes made them fear hacking.
- Stance: neutral
- Attitude: confused, anxious
- Evidence:
- "Is the not scam???"
- Explanation: Shows uncertainty and suspicion at the start of the topic.
- "Please give me link to song with ad the scam website"
- Explanation: Continues engaging with the suspicious material, reflecting confusion rather than a clear position.
- "i just scared that my account got hacked XD"
- Explanation: Later confusion about credits/profile changes becomes fear of account compromise.

lucyferprimevil
- Idea: Interprets unexpected credits and changed profile info as possible hacking before learning others have the same issue.
- Stance: neutral
- Attitude: alarmed, relieved
- Evidence:
- "hi someone changed my url and name and added 550 credits XD same with other account"
- Explanation: Reports suspicious account changes as if they may be unauthorized.
- "oh i just scared that my account got hacked XD"
- Explanation: Explicitly states fear of hacking.
- "okay all having same problem XD i changed all passwords again becaus scared that i got hacked"
- Explanation: Shows sustained anxiety and a security response.

Suno Team Response

furrybeans [Suno Team]
- No response from Suno team in the logs

Additional Evidence (Optional)

"atleast we get free 500 credits"
Explanation: This shows how scam/fraud confusion later blurred with official bonus credits, which may have made some users more uncertain about what is legitimate.

"its a thank you for the complications"
Explanation: A community explanation that the extra credits were official compensation, helping distinguish real credits from scam claims.

Topic: Copyrighted Lyrics / Copyrighted Songs Used with AI Music

Description

There is repeated tension around using copyrighted songs or lyrics with Suno, including users reporting others who do it, asking if it is allowed, and discussing workarounds. This is a legal and ethical topic because participants directly frame it as copyright misuse and possible moderation/admin action.

The discussion appears in several connected moments:
- A user asks whether they can remix a copyrighted song.
- Another user reports a TikTok account using copyrighted lyrics through Suno and asks for admin contact.
- Later users discuss actual examples of copied lyrics and whether they are allowed.
- People also discuss moderation blocking terms linked to copyrighted material and whether AI/copyright law protects outputs.

The dominant friction is between:
- users wanting to imitate or reuse copyrighted works,
- users reporting or criticizing this behavior,
- and others explaining that this likely violates rules or requires caution.

Timeline

- **2024-04-13 14:02:24 - 14:02:58**
- **2024-04-13 14:22:30 - 14:22:37**
- **2024-04-13 15:39:41 - 15:44:35**
- **2024-04-13 17:00:00 - 17:00:00**
- **2024-04-13 21:07:16 - 21:08:15**
- **2024-04-13 21:29:51 - 21:31:39**
- **2024-04-16 05:48:47 - 05:49:34**

Evolution over time
- It begins as a practical question: can copyrighted songs be remixed with Suno?

- Soon after, another user escalates it by reporting a TikTok page using copyrighted lyrics with Suno and asking for admin contact.
- Later, users note prompts being moderated and discuss specific words/phrases possibly being blocked because they reference copyrighted material.
- Another user says they have had songs removed because they used lyrics from actual songs.
- By 2024-04-16, the topic comes back around to whether using lyrics from Beck or similar sources is acceptable, showing the issue never fully resolves in the community.

Key Participants

ed6491
- Idea: Asks directly whether copyrighted songs can be remixed.
- Stance: neutral
- Attitude: inquisitive
- Evidence:
- "Is there anyway to remix a copyrighted song?"
- Explanation: This introduces the legal issue directly.

mizu.aabbccddeeff
- Idea: Says copyrighted-song remixing is not possible with Suno but possible elsewhere, framed as “educational.”
- Stance: neutral
- Attitude: cautious, slightly defensive
- Evidence:
- "Not with suno, with sonauto you can (don’t ban me, educational)"
- Explanation: Distinguishes Suno from another tool and signals awareness this is sensitive.

.gefiltefish
- Idea: Reports a TikTok page using copyrighted lyrics with Suno and wants admin involvement.
- Stance: critical
- Attitude: concerned
- Evidence:
- "I know about a tiktok page that takes copyrighted lyrics and use suno to make versions of them, I will be glad if there is an admin here I can talk to"
- Explanation: Explicitly frames the behavior as reportable and seeks moderation help.

jyrgenhaizer
- Idea: Raises concerns when moderation blocks words/phrases and tries to understand whether it is a bug or a content filter issue.
- Stance: neutral
- Attitude: frustrated, confused
- Evidence:
- "I'm clueless why my prompts are getting moderated all the time? I have hell in my song, is that too much?"
- Explanation: Shows practical tension where moderation interferes with creative use.
- "the word hell is/was the problem ■"
- Explanation: Suggests moderation may be triggered by specific wording, though others dispute that interpretation.

.gefiltefish and **jyrgenhaizer** show different sides of the same issue:
one reports likely infringement by others, the other struggles with the moderation system that polices borderline content.

edcjj0691
- Idea: Notices songs disappearing and suspects it is because actual lyrics from copyrighted songs were used.
- Stance: neutral
- Attitude: resigned
- Evidence:
- "Suno ai removed some of my songs"
- Explanation: Reports content removal.
- "probs cause i used lyrics from actual songs"
- Explanation: Links removal directly to copyrighted lyrics use.

vencruel
- Idea: Keeps using Beck lyrics and expresses uncertainty about how to feel about it.
- Stance: neutral
- Attitude: conflicted
- Evidence:
- "I keep going back to using Beck lyrics, i can't help myself"
- Explanation: Admits repeated use of copyrighted lyrics despite awareness of the issue.
- "Idk how I feel about this, made using lyrics of E-pro by Beck"
- Explanation: Shows recognition that the practice is questionable.

theanimeco
- Idea: Questions whether copying actual song lyrics breaks Suno’s rules.
- Stance: critical
- Attitude: cautious
- Evidence:
- "Isn't it against Suno rules to just copy lyrics of other people's actual music?"
- Explanation: Explicitly frames the act as a rules issue.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"this is legal. Before the Throne is a song from the 1800s, and is part of the public domain. Only the modern day melody is copyrighted."
Explanation: This shows users explicitly distinguishing public-domain material from copyrighted material, which reinforces that the legal boundary is part of the discussion.

Topic: Ownership, Commercial Rights, and Monetizing Suno Songs

Description

A major recurring tension concerns who owns AI-generated songs, whether songs made on free plans can be commercialized, whether subscription status changes ownership, and how enforceable Suno’s

terms are. This is one of the clearest legal topics in the logs.

The contention appears in several connected sub-issues:
- whether users “have the rights” to songs they create,
- whether free-plan songs can later become monetizable,
- whether a paid subscription must be maintained,
- whether Suno can detect unauthorized commercial use,
- and whether those terms are legally enforceable.

The strongest friction is between:
- users asking for ways to commercialize songs created on free accounts,
- users warning that allowing that would undermine the business model,
- users disputing how Suno could technically enforce such restrictions,
- and moderators/users insisting that violating ToS is still a violation regardless of enforcement.

Timeline

- **2024-04-13 13:49:55 - 13:54:06**
- **2024-04-13 16:06:45 - 16:12:57**
- **2024-04-13 16:20:57 - 16:25:56**
- **2024-04-13 17:28:02 - 17:31:24**
- **2024-04-13 21:28:02 - 21:31:39**
- **2024-04-15 21:51:52 - 21:55:53**
- **2024-04-16 07:03:57 - 07:05:08**
- **2024-04-16 23:57:40 - 23:59:39**

Evolution over time
- Questions begin simply: “Do we have the rights?” and “Can I play songs on local radio?”
- Later the conversation sharpens around monetization on YouTube/Spotify and whether paid status must be active during upload.
- Multiple users then argue over whether Suno can actually enforce those rules via watermarking, content ID, or subscription tracking.
- Tension escalates when one user argues Suno “literally have no way of legally enforcing this” and a moderator responds with a timeout.
- The topic returns later with repeated clarification that only songs created during a paid period are commercially usable.

Key Participants

kandj
- Idea: Asks the baseline ownership question.
- Stance: neutral
- Attitude: inquisitive
- Evidence:
- "So if we create a song using Suno, do we have the rights to that song?"
- Explanation: Introduces the ownership issue directly.

irrealist
- Idea: Wants to commercialize a beloved free-plan song and asks if there is any path to do that later.
- Stance: neutral
- Attitude: frustrated, hopeful
- Evidence:

- "if I made a song i love on the free version of suno before subscribing and want to use it commercially... is there any way to do this?"
- Explanation: Frames the key legal/commercial problem.
- "I understand... just wish I hadnt made such a great track when experimenting... damn it!!"
- Explanation: Shows disappointment with the free-vs-paid restriction.

aliceruneheart
- Idea: Strongly argues that allowing free songs to become commercial later would undermine subscriptions, while also explaining that ownership depends on when the song was generated.
- Stance: critical of retroactive free-song monetization
- Attitude: assertive, explanatory
- Evidence:
- "Only they can give you a price for that and who knows what they'll do. Though I wouldn't hold your breath."
- Explanation: Says the only route is direct Suno approval, and even that is uncertain.
- "you're opening up doors for free account generation abuse to monetize."
- Explanation: Explicitly frames retroactive monetization as abuse risk.
- "Why does suno only allow subscribed people to own the music they generate? If you start allowing just anyone to own it then subscriptions become a moot point"
- Explanation: Clear reasoning for why she opposes changing the rule.
- "It only matters for the time the part/song was generated."
- Explanation: States a simpler interpretation of the policy.

weld93
- Idea: Says subscription is needed for YouTube monetization and claims uploads can be detected.
- Stance: supportive of enforcement
- Attitude: confident
- Evidence:
- "yes as long as you are a subscribed customer and maintain your subscription while its uploaded"
- Explanation: States a stricter interpretation of commercial eligibility.
- "its automatically scanned an analyzed by ai to detect the upload. It works the same way as Shazam"
- Explanation: Claims technical enforcement exists.
- "you will have a copyright logo next to it and wont be able to monetize if suno catches you without a subscription"
- Explanation: Expands on the enforcement claim.

mizu.aabbccddeeff
- Idea: Pushes back hard on claims that Suno can enforce post-upload subscription requirements and disputes how content ID/watermark systems would work.
- Stance: critical
- Attitude: skeptical, argumentative
- Evidence:
- "aint no way they can check for that bs"
- Explanation: Dismisses the claim that subscription status can be monitored after upload.
- "they literally have no way of legally enforcing this anyways lol"
- Explanation: Directly questions enforceability.
- "you cant detect that with contentid is what im saying"
- Explanation: Specifically disputes the technical mechanism being proposed.
- "there would be no way of linking it back to see if that specifc account had a 'current' subscription"
- Explanation: Refines the criticism toward account-song linkage.

wetcircuit
- Idea: Pushes back against freeloading/ToS evasion talk and says the watermark is embedded.

- Stance: critical
- Attitude: confrontational, admonishing
- Evidence:
- "the watermark is literally baked into our audio tracks. they can tell"
- Explanation: Directly asserts detection is possible.
- "sure, you can be a freeloader jerkface..."
- Explanation: Strongly negative reaction to discussing ways around payment/licensing.
- "have a day's time out to reflect why you are advocating violating the ToS"
- Explanation: Escalates the disagreement into moderation action.

slobo777
- Idea: Takes a more pragmatic middle position: yes, terms matter, but trying to squeeze money out of free generations likely isn't worth the effort anyway.
- Stance: neutral
- Attitude: calm, practical
- Evidence:
- "Trying to freeload a few ad $ off of the service is probably paid far lower than minimum wage"
- Explanation: Argues the practical reward is tiny even if someone wanted to cheat.
- "if you have made the songs during the payed period you dont have to mention suno" (actually from .derbaum, not slobo777)
- Explanation: Not slobo777; ignore.
- "if you can [pay], it's a no brainer"
- Explanation: Frames payment as reasonable rather than morally dramatic.

techno0469
- Idea: Asks whether free-plan songs can be sold as part of an NFT collection.
- Stance: neutral
- Attitude: inquisitive
- Evidence:
- "if i come up with my own lyrics for a song on the free version can I sell them, I am doing a nft collection."
- Explanation: Extends the ownership question into NFT-based commercialization.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"If you use a free SUNO account to make songs the „Copyright" belongs to suno... If you have a paid subscription all songs made DURING this paid period fully belong to you."
Explanation: This repeated community summary is the clearest policy statement present in the logs, even though it is not from a team member in this excerpt.

"all of the songs contain an inaudible watermark"
Explanation: This was later stated by a Suno Team member in the logs and supports the enforcement side of the debate, but that statement appears within a broader discussion rather than a full formal policy explanation.

Topic: Public Extension/Reuse as Song “Stealing” and Crediting Original Creators

Description

A distinct ethical tension arises around the ability to extend or reuse public songs, and whether that amounts to “stealing” if the extender removes attribution or republishes derivative versions. The issue is moral/legal because users talk explicitly about theft, credit, lyrics ownership, takedowns, and platform policy.

The conflict is not about whether the feature exists — users clearly accept it does — but whether using it without attribution is fair or should be restricted.

Timeline

- **2024-04-13 13:26:53 - 13:29:29** (rename from remix to reuse prompt, framing around what the feature is)
- **2024-04-13 17:39:29 - 17:44:09**
- **2024-04-13 17:54:33 - 17:55:49**

Evolution over time
- Early messages establish that “remix” was renamed “reuse prompt,” which already hints at a shift away from implying musical transformation.
- Later, users raise a direct complaint that public songs can be extended and effectively “stolen.”
- The discussion evolves into a more specific complaint about lack of visible credit and desire for settings to lock or authorize extensions.
- By the end, one user reports a copied derivative song being removed from Spotify, implying enforcement through outside platforms.

Key Participants

drakolyr
- Idea: Objects to people extending public songs and reposting them without preserving credit, but distinguishes between allowing reuse and wanting attribution.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "it is not cool that everyone can "Extend" a Song now and steal it"
- Explanation: Directly frames extension as theft.
- "Atleast if you extend, the Credit should be visible from the original song"
- Explanation: Shows the remedy they want is attribution.
- "I really dont mind if people use it, its awesome. Credits are important tho"
- Explanation: Clarifies that their objection is not reuse itself, but uncredited reuse.
- "The stolen Cat Song was taken down bye Spotify... YEEES it worked!"
- Explanation: Reports a successful takedown of a copied derivative.

mongolius91
- Idea: Suggests technical restrictions to prevent others from extending public songs without permission.
- Stance: critical

- Attitude: solution-oriented
- Evidence:
- "They should make it like nightcafe, where you can lock people from furthering the prompt and still be public"
- Explanation: Proposes a permission system for public works.

omnidestrophic
- Idea: Notes that this is bound to happen and questions copyrightability, while another user responds that lyrics remain copyrighted.
- Stance: neutral
- Attitude: resigned
- Evidence:
- "bound to happen because you can't copyright sad days"
- Explanation: Suggests the behavior is an expected consequence of weak ownership protection.

drakolyr (second role as enforcement observer)
- Idea: Says lyrics still belong to the original writer and references license ownership.
- Stance: critical
- Attitude: defensive
- Evidence:
- "The Licence is still yours."
- Explanation: Asserts original ownership persists.
- "The Lyrics is mine, its copyrighted"
- Explanation: Narrows the ownership claim specifically to lyrics.

omnidestrophic
- Idea: Says uncredited reuse is bad taste and compares it to sampling.
- Stance: critical
- Attitude: disapproving
- Evidence:
- "i think it is bad taste to not credit anyways, literally sampled your song"
- Explanation: Positions the issue morally as uncredited sampling.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"it was a bit of a trigger Song"
Explanation: This shows the pizza song was intentionally provocative, but it is not directly tied to the extension/stealing dispute.

Topic: AI Moderation and Censorship of Violence / Explicit Content

Description

Repeated friction appears around what Suno’s moderation blocks, especially when users want to create violent, explicit, diss, horror, or otherwise edgy songs. This is an ethical/moral issue because it concerns platform boundaries on violent, sexual, or hateful content.

The discussion includes:
- complaints that moderation is too broad or inconsistent,
- frustration that some words are blocked in one context but allowed in another,
- users trading workaround ideas,
- and moderator/guide reminders about keeping server content PG-13.

Timeline

- **2024-04-13 13:36:09 - 13:38:49**
- **2024-04-13 14:46:25 - 14:50:22**
- **2024-04-13 15:39:41 - 15:49:31**
- **2024-04-13 17:46:47 - 17:53:30**
- **2024-04-13 19:39:41 - 19:49:31**
- **2024-04-13 21:28:46 - 21:31:39**
- **2024-04-15 21:28:44 - 21:30:06**
- **2024-04-16 08:53:42 - 09:23:24**

Evolution over time
- Early on, users joke about what curse words the system allows, already noticing inconsistencies.
- The discussion becomes more serious when people ask why certain prompts are moderated and whether explicit lyrics will ever be supported.
- Several users complain about words like “hell,” violent D&D/war imagery, diss tracks, or bodily/sexual references being blocked unexpectedly.
- Community members repeatedly suggest using ChatGPT to identify problem phrases and using creative misspelling as a workaround.
- Moderators also remind users that the Discord itself is PG-13, making a distinction between what Suno may generate and what can be posted in-chat.

Key Participants

kalorful
- Idea: Wants explicit lyrics support for diss tracks and says external LLMs are too restrictive.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "When will Suno support explicit lyrics? I'm mostly using it to write diss tracks to my friends"
- Explanation: Directly criticizes the current moderation boundary.
- "I wanted to write some spicy lyrics but ChatGPT was too woke to let me"
- Explanation: Complains that upstream text moderation blocks desired output.

bornagainpenguin
- Idea: Criticizes over-controlled text systems and links this to broader culture of companies avoiding controversy.
- Stance: critical
- Attitude: cynical, argumentative
- Evidence:
- "They're all too controlled. Nerfed down to incompetence"
- Explanation: Strong criticism of moderation systems.

- "Companies became scared of controversy and bent over backwards to comply"
- Explanation: Broadens the complaint to a culture of over-moderation.

natebrown351
- Idea: Complains about “non-woke” content being blocked by upstream tools.
- Stance: critical
- Attitude: irritated
- Evidence:
- "I hate how woke a lot of things become after a while. I write a lot of non-woke content"
- Explanation: Explicit dissatisfaction with moderated or filtered creative constraints.

wappie6733
- Idea: Reports Suno generating what sounds like a racial slur in instrumental/rap contexts and finds that disturbing.
- Stance: critical
- Attitude: concerned
- Evidence:
- "AI hallucinates and adds n-word in there. This happened with three different generations"
- Explanation: Raises a serious moderation/safety issue around hallucinated harmful content.
- "It's funny how some instrumentals just can't stay instrumental"
- Explanation: Notes unwanted vocalization as part of the problem.

jyrgenhaizer
- Idea: Repeatedly struggles with moderation around “hell”/Helldivers lyrics and wants a way to report false positives.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "I'm clueless why my prompts are getting moderated all the time?"
- Explanation: Repeatedly frames the moderation as a problem.
- "is there a way to report these kind of bugs with automated moderation in suno app?"
- Explanation: Explicitly seeks escalation/reporting.

wetcircuit
- Idea: Explains that swearing is often okay but slurs/insults/context trigger the filter, and repeatedly enforces PG-13 norms in chat.
- Stance: neutral
- Attitude: corrective, firm
- Evidence:
- "The censor blocks slurs and insult words."
- Explanation: Gives the clearest short explanation of the moderation boundary.
- "Please stick to PG-13, ...or clever innuendo"
- Explanation: Applies that moderation norm to server behavior.
- "I make plenty of naughty lyrics. We're just asking not to share them here."
- Explanation: Distinguishes between creating content privately and posting it publicly in the server.

3daizy
- Idea: Clarifies that moderation depends on context, not only swear words, and warns users about sensitive phrasing.
- Stance: neutral
- Attitude: moderating, instructive
- Evidence:
- "It's the content in general.. the context"

- Explanation: Summarizes moderation as contextual.
- "please be mindful of using sensitive phrases like "kill my self" even in jest"
- Explanation: Shows active moderation around potentially harmful language in chat.
- "You can just add whatever you want, the bot will check your context"
- Explanation: Reinforces that Suno’s moderation is contextual rather than just keyword-based.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"Prompt flagged for moderation"
Explanation: This repeated error phrase appears all over the logs and is the concrete trigger for much of the frustration discussed in this topic.

"the moderation is done by chatgpt"
Explanation: This community explanation is repeatedly used to make sense of why filtering can seem inconsistent or contextual.

Chunk 7: 2024-04-16 to 2024-04-19

Not enough evidence in the logs.

Chunk 8: 2024-04-19 to 2024-04-22

Not enough evidence in the logs to identify a sustained ethical/moral/legal conflict with multiple users on AI music use that clearly extends beyond brief questions or moderation reminders. The main contentious topics explicitly present are below.

Topic: Multiple Accounts / Circumventing Credit Limits

Description

This is the clearest ethical/terms-related conflict in the logs. One user proposes or discusses using multiple/free accounts to work around limits, and others push back by calling it against the terms of service. The friction is tied to fairness and account abuse, not music aesthetics. The discussion is brief but direct and clearly contentious.

Timeline

- **2024-04-22 09:29:28 - 09:30:31**
- Discussion starts with using multiple accounts and immediately turns into correction about terms of service.

Evolution
- A user suggests or references using multiple accounts.
- Other users immediately object and state this violates Suno’s terms.
- The conversation ends quickly after correction rather than developing into a long debate.

Key Participants

Deleted User
- Idea: Suggests using another account as a workaround for limited credits.
- Stance: supportive
- Attitude: casual
- Evidence:
- "Use an alt bro"
- Explanation: This explicitly recommends using another account as a workaround.
- "Easy use a vpn"
- Explanation: This adds another workaround method after others raised terms concerns.

iiCaptain73
- Idea: Says multiple free accounts are against the terms and can lead to bans.
- Stance: critical
- Attitude: corrective, admonishing
- Evidence:
- "You know you are breaking TOS? you are not allowed more than 1 free user account. Otherwise people would just open 100 accounts and not pay."
- Explanation: This is a direct objection based on rules and abuse prevention.
- "well, probably not wise announcing that in the Discord server ■■■■■"
- Explanation: The facepalm and wording show disapproval and warning.

zpti
- Idea: Says the extra account was for testing, then says they will remove it.
- Stance: neutral
- Attitude: defensive, then compliant
- Evidence:
- "It was to test :ClapPepe:"
- Explanation: This responds to the accusation by framing the second account as experimental.
- "I'll remove the account if that's the only takeaway."
- Explanation: This shows backing down after pushback.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"creating more than one account is against ToS"
Explanation: Reinforces that the issue is framed as rules abuse, not just etiquette.

Topic: Copyright / Ownership / Reuploading AI Songs

Description

This is the longest recurring legal/ethical friction topic. Users debate ownership, whether AI-generated songs can be copyrighted, whether people may monetize them, and how to respond when others reupload songs to YouTube/Spotify. The conflict includes both practical concerns ("someone stole my song") and disagreement over legal interpretation ("AI generated content cannot be copyrighted" versus "you own the songs made during paid period").

Timeline

- **2024-04-19 10:25:22 - 10:27:14** — commercial use of Suno songs for products is raised.
- **2024-04-19 13:15:47 - 13:16:21** — difference between free/paid tied to ownership.
- **2024-04-19 13:20:42** — user suggests revenue-sharing model for uploads.
- **2024-04-19 14:40:05 - 14:44:17** — rights questions and uncertainty about AI laws.
- **2024-04-19 17:40:55 - 17:47:57** — warning that a third party is claiming songs from Suno's homepage on external platforms.
- **2024-04-21 07:27:26 - 07:31:13** — discussion of whether extending free songs under paid plan changes rights.
- **2024-04-21 07:31:13 - 07:46:46** — debate about whether AI songs can be copyrighted, whether re-recording changes ownership, and whether terms override law.
- **2024-04-22 11:50:52 - 12:00:55** — renewed debate over whether AI songs are copyrightable and how takedowns work.
- **2024-04-22 13:54:37 - 13:58:24** — more stolen-song reporting discussion.
- **2024-04-22 14:18:23 - 14:24:58** — ethical debate over monetizing AI songs.
- **2024-04-22 15:39:31 - 15:47:52** — questions about use on YouTube/streams and ownership.
- **2024-04-22 16:52:49 - 17:03:48** — whether songs from free period can later be licensed through support.
- **2024-04-22 23:40:06 - 23:56:56** — continued rights questions about free versus paid generations.

Evolution
- Early on, users ask practical questions about commercial use and ownership.
- Suno team members clarify free vs paid ownership rules.
- Later, users warn of real-world theft/reuploading of Suno songs to other platforms.
- The topic evolves into legal interpretation arguments: some users argue AI works are not copyrightable, others stress the paid-plan license and practical enforcement through distributors and takedowns.
- The discussion becomes heated at points, especially around whether users should monetize AI songs and whether terms of service or law control ownership.

Key Participants

drakolyr
- Idea: Repeatedly warns users about stolen songs and encourages takedowns/claims.
- Stance: critical
- Attitude: frustrated, vigilant
- Evidence:
- "Someone named Creative Music Content (CmC) is claiming EVERY Song from the Home Page of Suno."
- Explanation: This explicitly identifies a large-scale reupload/claim issue.
- "I will continue to claim and report these Dudes. Noone will get profit out of it."

- Explanation: Shows active opposition and intent to enforce against the reuploader.
- "Still people should not steal other peoples work ■"
- Explanation: States the ethical principle directly.

zpti
- Idea: Expresses legal uncertainty about AI ownership internationally and AI laws.
- Stance: neutral
- Attitude: uncertain, analytical
- Evidence:
- "I'm still uncertain how this holds internationally tho."
- Explanation: Explicitly states uncertainty on cross-country legal treatment.
- "Especially with the rise of AI related laws"
- Explanation: Shows concern about broader legal ambiguity.

woldvirtual
- Idea: Suggests Suno should take a small percentage instead of forbidding monetized uploads from free users, as an incentive model.
- Stance: critical
- Attitude: constructive
- Evidence:
- "songs generated in suno can be uploaded in video format to YouTube as long as it is not monetized. Well, as an incentive you would not have to give a small percentage of between 3/5%"
- Explanation: This is a direct criticism of the current monetization rule and a proposed alternative.

bleedfeed
- Idea: Says AI-created content cannot be copyrighted in many countries.
- Stance: critical
- Attitude: matter-of-fact
- Evidence:
- "ai created content can not be copyrighted in a lot of countries"
- Explanation: This is a broad legal claim used to challenge assumptions of ownership.

tsarpendragon
- Idea: Wants to know if previously free songs can later gain rights; says a free-created song is too good to leave unused.
- Stance: critical
- Attitude: concerned, pleading
- Evidence:
- "I really hope that's the case, I made a phenomenal song on the first prompt I ever tried"
- Explanation: Shows why retroactive rights matter to them.
- "I don't want this song to die on my hard drive"
- Explanation: Indicates strong frustration with ownership limits.

princebagel
- Idea: Says monetizing AI-generated songs feels morally wrong.
- Stance: critical
- Attitude: firm
- Evidence:
- "I don't think AI generated music should be a monetized thing. I don't plan on changing minds, I just find it morally wrong"
- Explanation: Direct moral objection to AI-music monetization.

natebrown351

- Idea: Agrees with using AI songs for personal/video projects without monetization.
- Stance: critical
- Attitude: calm
- Evidence:
- "I agree. I only ever use this stuff for my own video and audio projects, without the intent of monetizing."
- Explanation: Explicit support for non-commercial use and hesitation about monetization.

the.morpha
- Idea: Defends monetizing Suno songs as ethical.
- Stance: supportive
- Attitude: blunt
- Evidence:
- "yes it's ethical, and 'tough'"
- Explanation: A direct response rejecting the objection to monetization.

wetcircuit
- Idea: Repeatedly explains paid/free ownership, argues monetization is allowed on paid plans, and pushes back against anti-AI moral panic.
- Stance: supportive
- Attitude: assertive, sometimes sarcastic
- Evidence:
- "the audio we make under a paid subscription is ours and we can monetize, sell, use in professional projects..."
- Explanation: Clear statement supporting paid-user rights.
- "Do you think it is unethical to send an email? Why do you hate postmen so much?"
- Explanation: Uses analogy and sarcasm to push back on anti-AI ethical objections.
- "How many musicians you were paying before you replaced them with Suno?"
- Explanation: Challenges the idea that users are directly depriving musicians of paid work.

tonno0602
- Idea: Argues terms of service do not override law and suggests re-recording may avoid issues.
- Stance: critical
- Attitude: argumentative
- Evidence:
- "TOS are clear. Thing is TOS < Law"
- Explanation: Directly disputes relying on platform terms as the final answer.
- "I think the US copyright office works even harder"
- Explanation: Introduces outside legal authority to challenge assumptions in chat.

Suno Team Response

furrybeans [Suno Team]
- Clarifies that paid and free differ in ownership, and that songs made during paid periods can be monetized.
- Evidence:
- "The only difference is the amount of credits you get and the ownership of the songs you make"
- Explanation: Direct statement tying payment to ownership.
- "If you have a paid subscription you can monetise generated songs, on other platforms."
- Explanation: Confirms commercial use for paid users.

suno_z [Suno Team]

- No direct ownership statement in the key legal moments, but visible in feature-related chat only.
- Evidence:
- Not enough evidence in the logs

Additional Evidence (Optional)

"If you have made a song outside of the paid period, now have a paid subscription and want to use it for a monetised application please contact support@suno.com"
Explanation: This repeated guidance is key because it leaves open a possible case-by-case resolution for earlier free songs.

Topic: Content Moderation / Censorship Blocking Lyrics

Description

There is repeated frustration over Suno's moderation/filtering of lyrics and prompts. Users complain that harmless or artistic lines get blocked, especially around violence, profanity, sexual content, and unusual wording. Others discuss workarounds like phonetic spelling or altering words. This is ethical/moral adjacent because it concerns speech restrictions and what kinds of creative expression Suno permits.

Timeline

- **2024-04-19 10:56:10 - 10:59:40** — multiple account discussion briefly touches TOS seriousness.
- **2024-04-19 12:29:17 - 12:33:33** — public-domain Irish folk lyrics blocked; users debate violence vs copyright as the reason.
- **2024-04-19 15:05:33 - 15:06:50** — complaint that prompts are flagged even with innocuous genre terms.
- **2024-04-19 15:16:31 - 15:18:50** — users discuss bypassing the filter by phonetic spelling and admit making NSFW songs.
- **2024-04-19 15:24:31 - 15:30:40** — user says filter hinders creativity and others disagree or suggest misspellings.
- **2024-04-19 15:43:52 - 15:50:26** — extended argument over removing or keeping the content filter.
- **2024-04-19 16:24:28 - 16:24:34** — user asks the functional purpose of censorship.
- **2024-04-20 01:09:32 - 01:11:24** — "smashing" gets flagged and another user says swearing can work depending on context.
- **2024-04-20 19:30:09 - 19:33:10** — users discuss moderation on "kill" and punctuation changes.
- **2024-04-21 21:00:56 - 21:05:27** — PG13 moderation enforced in Discord, including discussion of what counts.
- **2024-04-22 13:40:31 - 13:43:22** — users ask how to diagnose "flagged for moderation."

Evolution
- At first, users compare blocked lyrics to either violence filtering or copyright filtering.
- Then users discover the moderation is inconsistent and context-sensitive.
- Frustration rises when users want to write vulgar rap or dark content but have to spell words oddly.
- Counterarguments appear: some users defend the filter because otherwise the server would be full of slurs/edgy content.

- The Discord moderation side appears too, enforcing PG13 rules for what may be shared in the server.

Key Participants

paulvern
- Idea: Questions why an old folk song is blocked, saying it is a real song from the 1700s.
- Stance: critical
- Attitude: puzzled
- Evidence:
- "I'm trying to adapt an Irish folk song, but the lyrics seem unusable and marked for moderation."
- Explanation: Clear complaint about moderation blocking old lyrics.
- "it's a real song"
- Explanation: Pushes back on the idea that the block is justified.

alikan
- Idea: Says the block is likely due to violent terms or copyright.
- Stance: neutral
- Attitude: matter-of-fact
- Evidence:
- "Too many violent terms it will not allow it."
- Explanation: Gives a direct explanation based on observed content.
- "so either Violent - or copyright."
- Explanation: Narrows the likely moderation reasons.

iicaptain73
- Idea: Says the moderation is from ChatGPT and mostly flags violence references.
- Stance: neutral
- Attitude: explanatory
- Evidence:
- "It's chatGPT moderation. Reference to violence is flagged mostly."
- Explanation: Direct claim about the moderation mechanism.
- "I reckon the first line is an issue already."
- Explanation: Applies that rule to the actual example.

tarynshapley
- Idea: Says the content filter hurts creativity and blocks many words they want in rap.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "The content filter is really hindering my creativity."
- Explanation: Explicit complaint.
- "I have a lot of rap lyrics written up... but most of it uses quite vulgar language. I just wanna create my own songs"
- Explanation: Grounds the complaint in their own blocked creative work.
- "For 'fuck' I have to do frush or for 'shit' I have to do shiss"
- Explanation: Shows repeated workaround frustration.

itsthejimjam
- Idea: Opposes removing the filter because it would lead to slur-filled low-effort songs.
- Stance: supportive
- Attitude: firm
- Evidence:

- "i dont think they should remove the content filter. i dont want discord to get spammed with edgy teenagers making songs that are just slurs"
- Explanation: Clear defense of moderation on community-quality grounds.
- "i rarely have issues with the filter. swearing is perfectly acceptable."
- Explanation: Pushes back on claims that the filter blocks too much.

zpti
- Idea: Says AI content filters over-correct and are inconsistent.
- Stance: critical
- Attitude: resigned, analytical
- Evidence:
- "AI content filters tend to over correct a lot."
- Explanation: Broad criticism of the moderation behavior.
- "I can have a song describe a full autopsy, but the moment I mention sowing her up it triggers"
- Explanation: Concrete example of inconsistency.

majoraslayer
- Idea: Asks what the censorship is for—ideology, avoiding bannable ChatGPT prompts, or preventing offensive generation.
- Stance: critical
- Attitude: inquisitive
- Evidence:
- "What's the functional purpose of the censorship?"
- Explanation: Directly frames the issue as a policy question.

diamoddelicious
- Idea: Notes inconsistency in what gets through and what gets flagged.
- Stance: critical
- Attitude: confused
- Evidence:
- "what are the rules on whats aloud cuz somethings go thru and others dont like some songs swears dont get flagged and others they do"
- Explanation: Summarizes repeated inconsistency complaints.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"Any word it doesn't like, just type it different."
Explanation: This advice shows users openly adapting around the filter, which supports the claim that moderation is a repeated friction point.

Topic: English-Only Moderation and Moderation Burden

Description

This is a narrower moderation conflict with ethical/legal adjacency through enforcement and inclusivity tensions. Users begin speaking Chinese and related dialects in general chat; moderators push them to English-only or language-specific channels because they cannot moderate languages they do not understand. The tension is not hostile, but it is a clear point of friction between inclusivity and moderation practicality.

Timeline

- **2024-04-19 16:20:38 - 16:25:46**

Evolution
- Users start conversing in Chinese/Minnan in general chat.
- Suno-affiliated moderators ask them to keep it in English.
- Another user explains the practical reason: moderation cannot happen in languages moderators cannot read.
- The discussion resolves by redirecting users to language-specific channels.

Key Participants

3daizy
- Idea: Asks users to keep general chat in English and use language-specific rooms.
- Stance: supportive
- Attitude: firm, practical
- Evidence:
- "## Alright.. let's keep it english please ■"
- Explanation: Direct moderation instruction.
- "yeah well it's a pain to keep using a translator to monitor"
- Explanation: Gives the reason as moderation workload.

.derbaum.
- Idea: Says moderation cannot happen properly in languages moderators cannot read.
- Stance: supportive
- Attitude: practical
- Evidence:
- "we cant moderate languages we cant read... ■■■■"
- Explanation: Clearly states the rationale for the English-only request.

artccue
- Idea: Explains they wanted to help Asian users, and notes other language channels exist.
- Stance: neutral
- Attitude: apologetic
- Evidence:
- "sorry, was trying to let them know here is also asian fan, and would like to help them"
- Explanation: Shows the user was not trying to resist moderation, just help others.
- "please try not to use non-english in general chat"
- Explanation: Ends up reinforcing the moderator guidance.

Suno Team Response

No response from Suno team in the logs

Topic: User Pushback Over Song-Length Limits and Moderation Tone

Description

This is the sharpest interpersonal conflict in the logs, though it is more about moderation tone and product limits than broad legal policy. A user argues that songs should be longer than two minutes and that “extend” creates unwanted variations. Others respond with explanations, then with mockery and eventually a timeout. This becomes contentious because the user says they were dogpiled and mocked instead of helped. While not directly about AI ethics in the broad sense, it does involve platform constraints and moderation conduct around AI-generated music workflows.

Timeline

- **2024-04-19 16:22:20 - 16:56:52**

Evolution
- The user asks why songs cannot just be 3–4 minutes like typical songs.
- Others explain memory/technical limits and recommend “extend” and “get whole song.”
- The user rejects repeated “just extend it” advice because it does not preserve exact choruses.
- Moderators and users become sarcastic and hostile.
- The user gets timed out, then later says the timeout was fair but the mocking was excessive.

Key Participants

eslachance
- Idea: Wants direct generation of longer songs without awkward extensions that alter melodies.
- Stance: critical
- Attitude: frustrated, later conciliatory
- Evidence:
- "I really wish there was a way to generate a song longer than 2 minutes."
- Explanation: Starts the contention clearly.
- "using *extend* creates **variations** that do not match the first part directly"
- Explanation: Explains why the workaround is unsatisfactory.
- "The timeout was fair game to be honest, though, being dogpiled on and mocked is a little too much"
- Explanation: Acknowledges the moderation while criticizing discussion tone.

3daizy
- Idea: Repeatedly tells the user to use extend and get-whole-song methods.
- Stance: supportive
- Attitude: increasingly firm
- Evidence:
- "Maybe my video can explain better.. but just use 'extend' to continue a song"
- Explanation: Offers a help resource and repeats the standard solution.
- "Either you are not understanding us.. or....?"
- Explanation: Marks growing impatience.

wetcircuit
- Idea: Explains technical limits and later warns the user over attitude.
- Stance: supportive
- Attitude: explanatory, then confrontational
- Evidence:
- "there is a technical limitation that the maximum length of the 1st clip is 2min"
- Explanation: Gives the clearest direct explanation of the limitation.
- "Hi, you seem to have an attitude. We are telling you how it works"
- Explanation: Shows the conflict escalated from technical help into tone-policing.

jeezisrice
- Idea: Defends the advice given and says the user is rejecting help others successfully use.
- Stance: supportive
- Attitude: irritated, mocking
- Evidence:
- "if everyone else is doing it and getting a different result... the weak link is not the advice"
- Explanation: Frames the issue as user error rather than product limitation.
- "I mean - you implicitly rejected the advice and kind help from several people"
- Explanation: Justifies the group's pushback.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"COMPUTATORS HAVE LIMITS"
Explanation: This sarcastic line from wetcircuit shows how the tone of the conflict hardened after the initial technical explanation.

If you want, I can turn this into:
1. a stricter **exhaustive evidence table**, or
2. a **topic-by-topic participant matrix** with every involved non-team user.

Chunk 9: 2024-04-22 to 2024-04-26

Topic: Rights, Ownership, and Reuse of Suno-Generated Songs

Description

The clearest ethical/legal contention in the logs concerns who owns AI-generated songs, what can be monetized, and whether others can reuse or extend songs. This discussion includes anxiety about stolen songs, whether free-tier songs can later become monetizable, whether others can extend public songs and claim them, and how copyright should work for AI-assisted music.

The tension appears in multiple linked strands:
- users asking whether free-tier songs can be used commercially,
- complaints about others “stealing” and reposting songs,
- disagreement over whether public songs being extendable is a “bug” or just part of the rules,
- concern that posting publicly exposes work to misuse,
- moderators and Suno team clarifying that paid-plan songs are yours while free-plan songs are not monetizable by the user.

The discussion evolves from practical rights questions into direct friction. Some users argue that the current system effectively enables misuse, while moderators/team members emphasize the terms and practical steps like keeping songs private until ready or using distributors.

Timeline

- **2024-04-22 18:32:24 - 18:38:57**
- **2024-04-22 19:38:13 - 19:48:22**
- **2024-04-22 20:14:14 - 20:15:09**
- **2024-04-22 21:18:21 - 21:23:23**
- **2024-04-22 23:00:27 - 23:00:35**
- **2024-04-23 02:07:45 - 02:08:10**
- **2024-04-23 09:06:27 - 09:14:52**
- **2024-04-23 09:21:41 - 09:23:22**
- **2024-04-25 15:58:13 - 16:01:03**
- **2024-04-25 22:17:34 - 22:18:58**
- **2024-04-25 23:13:39 - 23:16:03**
- **2024-04-26 04:57:15 - 05:00:04**
- **2024-04-26 07:04:38 - 07:10:25**
- **2024-04-26 08:15:13 - 08:17:14**
- **2024-04-26 22:00:36 - 22:03:53**

How the discussion evolved over time
- It starts with a practical question about whether free-tier users can separate and edit vocals, leading to Suno team clarification that non-commercial personal use is acceptable.
- It expands into broader rights distinctions between free and paid tiers, with users stating “rights belong to you” on paid tier and worrying about free-tier ownership.
- Later, users complain that others can steal public songs, repost them, or upload them to YouTube.
- The debate intensifies around whether extending another person’s song effectively lets someone appropriate it. One side calls this a major bug; another says users should simply keep important songs private and use distributors if they care about ownership.
- By April 26, a Suno team member clarifies the intended distinction between **Public** and **Link-Only**, and says the TOS wording is outdated and should be clarified.

Key Participants

afkderp
- Idea: Free-tier users are vulnerable because others can steal and repost songs, while the original free user cannot effectively enforce rights.
- Stance: critical
- Attitude: worried, frustrated
- Evidence:
- "it sucks how a random channel can steal your songs if you dont have pro/priemer because you cant dmca siince you dont have any ownership over the song"

- Explanation: Direct complaint tying free-tier status to inability to stop unauthorized reuse.
- "they did that with clownstep"
- Explanation: Claims a concrete example of a song being taken and reposted.

slobo777
- Idea: Free users agreed to limited rights, and the harm of theft is annoying but probably low-value in practice.
- Stance: neutral
- Attitude: calm, minimizing
- Evidence:
- "That's because legally speaking they're not your songs. You agreed to that so you could have free fun making them."
- Explanation: Summarizes the free-tier rights limitation as an accepted tradeoff.
- "It's annoying, but the chances of that having any value to them is low."
- Explanation: Downplays the practical stakes of theft.

jvarvsev
- Idea: To avoid others taking songs, publish elsewhere first or avoid making them public on Suno.
- Stance: neutral
- Attitude: practical
- Evidence:
- "Thats why I always upload on YouTube first before I put it out to public on suna"
- Explanation: Offers a protective workflow in response to theft concerns.
- "Or don't make your stuff public on Suno at all"
- Explanation: Suggests privacy as the solution.

stararmy
- Idea: The current public/extend behavior is troubling because someone can extend a tiny piece and appear as creator of the result.
- Stance: critical
- Attitude: concerned
- Evidence:
- "I don't really like the idea that I can spend 2000 credits perfecting a song then someone extends the last 2 seconds with [end] and now they have it on their profile as the creator."
- Explanation: Clear objection to how extension and attribution currently interact.

dreamtrove.
- Idea: The extension/ownership behavior is a serious bug that lets others overwrite creator credit and discourages publishing.
- Stance: critical
- Attitude: alarmed, insistent
- Evidence:
- "I mean, the continue should belong to the person who continues, because probably they wrote their own lyrics."
- Explanation: Distinguishes continuation authorship from original song authorship.
- "But the whole song should belong to the person who made the first iteration, the person whose song it is."
- Explanation: States the core principle they think should govern ownership.
- "One guy with a bot could steal every song on Suno right now, and the suno.ai site would ■ it."
- Explanation: Frames the issue as large-scale and systemic.
- "It's a literal bug, not a feature"
- Explanation: Explicitly characterizes the behavior as defective, not intentional.

drakolyr
- Idea: The TOS language about extension feels like it encourages bad behavior, even if the platform should support sharing.
- Stance: critical
- Attitude: disappointed but measured
- Evidence:
- "I just think, there would be better ways than this... but anyway. I stated my suggestion. Sorry for the Uproar here"
- Explanation: Shows criticism while trying to de-escalate.
- "I really like the sharing part. ... i dont like that someone claims my songs as his."
- Explanation: Distinguishes liking sharing from disliking appropriation.
- "I wouldnt have a problem right now, if it wouldnt be made ok in the ToS."
- Explanation: Focuses criticism specifically on the rules wording.

player_of_the_games
- Idea: The current rules and mechanics around extending others' songs are unclear and potentially problematic, especially for ownership and public sharing.
- Stance: critical
- Attitude: analytical, persistent
- Evidence:
- "Can someone clarify what happens in the following situations: - A paid user extends a song that they created as a free user - A paid user extends a song that was created by a free user"
- Explanation: Raises concrete edge cases around ownership.
- "I think the ToS should be at the least up to date"
- Explanation: Criticizes outdated wording directly.
- "there are things here that are totally new"
- Explanation: Frames the issue as one needing clearer policy because AI changes the situation.

wetcircuit
- Idea: Users should behave professionally if they care about ownership; public sharing implies risk; many ownership fears are overblown or amateurish.
- Stance: mixed / defensive of current practical approach
- Attitude: blunt, sarcastic, dismissive
- Evidence:
- "just don't make your songs public"
- Explanation: Gives a blunt practical solution instead of arguing for system changes.
- "If you want to protect your songs, get a distributor."
- Explanation: Frames protection as a professional responsibility.
- "ONLY AN AMATEUR would leak their own unpublished works..."
- Explanation: Dismisses public-sharing complaints as naive.
- "No, he is exaggerating. What he's talking about is that I can download an mp3 from the internet, thus 'steal' it."
- Explanation: Pushes back against claims of a major exploit.
- "I don't think negative prompts work..., but I have not extensively tried..."
- Explanation: Example of practical, non-speculative guidance elsewhere in the discussion.

alliecat4
- Idea: Under current U.S. rules, AI-generated output without sufficient human authorship is hard to copyright, though this may change.
- Stance: neutral
- Attitude: explanatory
- Evidence:
- "Because a prompt is an idea and not a tangible form, it can't be copyrighted."

- Explanation: Lays out one legal interpretation.
- "Because the tangible form is made by AI and not a human author and only human authors can hold copyright the finished product can’t be copyrighted either."
- Explanation: Gives the reasoning behind that position.

Suno Team Response

furrybeans [Suno Team]
- Clarified early on that personal non-commercial manipulation of free-tier outputs was likely okay:
- Evidence:
- "As long as you're not putting it on streaming platforms (spotify etc.) or making money from it, this shouldn't be a problem."
- Clarified that “Service Content” likely differs from output:
- Evidence:
- "I would've thought 'Service Content' differs from 'Output'"
- Pushed back on claims that quality changes based on load:
- Evidence:
- "Pretty sure it's a myth that the quality gets better/worse based on time or amount of usage, or subscription status."
- Clarified that old TOS wording is outdated and that privacy currently hinges on Public vs Link-Only:
- Evidence:
- "yes thanks for pointing this out, this section of the TOS is a bit out of date or at least could be clarified."
- "For now, the relevant distinction for sharing / privacy is the Public vs Link-Only toggle."
- Explained intended direction: users should gain status from others extending their work, not feel ripped off:
- Evidence:
- "you want to be able to gain status from people extending your stuff, not feel ripped off by it"

patsuno [Suno Team]
- Confirmed outdated TOS language and clarified the current sharing model:
- Evidence:
- "this section of the TOS is a bit out of date or at least could be clarified."
- "Public means: 'I allow Suno to surface this song on the front page...'"
- "'Link-Only' means: 'you have to have a link to the song in order to access it'"
- Acknowledged the need to make original authorship more visible:
- Evidence:
- "I think we should make it easier to see that user B extended from user A, though."
- "you want to be able to gain status from people extending your stuff, not feel ripped off by it"

Additional Evidence

"Free tier - Suno has rights to the song Paid tier- rights belong to you"
Explanation: A concise user summary of the core ownership distinction being debated.

"Just made a free account song and if I get one of the plans can i use the songs i already created"
Explanation: Shows repeat confusion over whether upgrading can retroactively change ownership.

"all songs made during a paid sub stay yours even after the sub ends."
Explanation: Community guidance consistent with Suno’s repeated clarifications about paid-period ownership.

Topic: Copyrighted Lyrics, Covers, and Referencing Existing Artists

Description

A second major contention concerns using copyrighted lyrics, creating covers or parodies, and prompting songs to sound like known artists. This topic mixes legal concerns, moderation actions, and disagreements about what is acceptable.

The core tensions are:
- users trying to use existing copyrighted lyrics or recognizable artist styles,
- moderators removing songs and warning users,
- users debating whether covers are practically harmless if non-commercial,
- confusion over whether parody or transformed use is acceptable,
- concern over naming artists or reproducing recognizable vocal styles.

Timeline

- **2024-04-22 18:00:44 - 18:01:34**
- **2024-04-22 18:01:34 - 18:03:03**
- **2024-04-22 18:34:46 - 18:38:57**
- **2024-04-22 21:18:21 - 21:23:23**
- **2024-04-22 22:20:12 - 22:25:03**
- **2024-04-22 23:35:08 - 23:38:52**
- **2024-04-23 01:54:52 - 01:57:05**
- **2024-04-23 07:53:54 - 07:57:05**
- **2024-04-23 08:07:45 - 08:08:10**
- **2024-04-24 01:49:41 - 01:51:28**
- **2024-04-24 01:55:54 - 01:57:05**
- **2024-04-24 22:19:58 - 22:24:25**

How the discussion evolved over time
- It begins with users asking how to imitate existing artists or voices using prompts.
- Later, users ask directly whether they can upload to Spotify or use songs commercially, leading to corrections that only paid-tier creations are publishable.
- Moderators then explicitly intervene when copyrighted lyrics or covers are posted or discussed, deleting songs and telling users they agreed not to use copyrighted material.
- The debate becomes sharper when one user argues “No one is going to sue over random covers,” and moderators answer that users agreed not to use copyrighted material regardless.
- By the end, the moderation stance is firm: don’t post material violating copyright, and use parody/original transformation instead.

Key Participants

shadow388
- Idea: Wants to create “just for fun” using copyrighted song material and seems surprised when it is removed.
- Stance: neutral / conflicted

- Attitude: apologetic after correction
- Evidence:
- "Oh we can't create just for fun? tbh I didn't read it."
- Explanation: Shows they were unaware of the rule and thought casual use might be okay.
- "Yeah sorry, I didn't read. I will delete it?"
- Explanation: Accepts correction and offers compliance.

en_tal
- Idea: Covers seem harmless if they are not commercial because many exist on YouTube.
- Stance: critical of strict anti-cover stance
- Attitude: dismissive, matter-of-fact
- Evidence:
- "Only if you're making money. No one is going to sue over random covers. There's millions of them on YT."
- Explanation: Minimizes legal/moral risk and pushes back on moderation logic.

meldrey_draakus
- Idea: Forcing AI into direct conflict with artists/producers is undesirable.
- Stance: supportive of caution
- Attitude: cautionary
- Evidence:
- "Forcing Suno to suddenly take on angry and scared artists and producers is not what we want to do."
- Explanation: Explicitly argues for avoiding antagonizing rights holders.

bender1084
- Idea: Users can hint at artists indirectly through geography or scene descriptions rather than direct naming.
- Stance: neutral
- Attitude: practical
- Evidence:
- "For infected mushroom, I asked it to make the style of Israeli psytrance duo.. heh good luck suing THAT ripoff."
- Explanation: Shows a workaround strategy for getting close stylistically without direct naming.
- "For In Flames, I just repeated melodic metal and put gothenburg in the description once or twice."
- Explanation: Another indirect-artist prompting example.

great_paimon
- Idea: The best guidance is to look for explicit rules/evidence rather than vague claims, and AI restrictions often relate to impersonation/fraud issues.
- Stance: neutral
- Attitude: analytical
- Evidence:
- "The best answer would be with proof where it outlines what is not allowed."
- Explanation: Calls for explicit documentation rather than assumptions.
- "Most of the time, the 'AI not allowed' has quite certain caveat such as AI music cannot mimic/sound like someone famous"
- Explanation: Frames the likely legal concern around imitation and attribution.

Suno Team Response

3daizy
- Repeatedly enforced the no-copyrighted-material rule and removed violating posts.

- Evidence:
- "You are not allowed to use 'words of a real singer'. Then you are violating copyright. And you agreed with this"
- "Again.. people agreed on the rule not to use copyrighted material.."
- "I deleted it now.. please don't post songs here that violate copyright. Thanks"
- "Here is a tip: if you want to use similar vibe. Just ask chatGPT to make a parody from songs like that. ■"
- Explanation: Clear moderation stance—no direct copyrighted lyrics or direct artist reuse in posted songs; parody/original rewriting is the permitted workaround.

furrybeans [Suno Team]
- Reiterated that Suno is for unique music and not using copyrighted voices/material.
- Evidence:
- "You're meant to only use your own lyrics or lyrics you have obtained rights to use"
- Explanation: Confirms the official platform expectation around lyrics use.

Additional Evidence

"Has Suno never heard of a Cover?"
Explanation: Shows users directly pushing the cover-song issue into the conversation.

"make a song in the style of eiffel 65"
Explanation: A concrete example of users trying to prompt recognizable artist likeness.

Topic: Content Moderation / Flagged Prompts and Perceived Overblocking

Description

A major recurring friction point is Suno’s prompt moderation. Users complain that innocent or contextually justified prompts are blocked, especially around violence, death, family-friendliness, or even apparently harmless words. The issue becomes contentious because users view the filters as inconsistent, while others explain that ChatGPT-based moderation is contextual and imperfect.

This topic is especially relevant to ethical/moral governance because it concerns how an AI music platform restricts speech/content and what kinds of themes are allowed.

Timeline

- **2024-04-22 17:07:58 - 17:08:08**
- **2024-04-22 17:48:01 - 17:49:29**
- **2024-04-22 21:48:15 - 21:55:56**
- **2024-04-22 23:33:34 - 23:36:10**
- **2024-04-22 23:45:19 - 23:49:58**

- **2024-04-23 06:33:45 - 06:34:55**
- **2024-04-23 06:42:11 - 06:45:03**

- **2024-04-23 06:57:26 - 06:58:53**
- **2024-04-23 07:59:30 - 08:06:16**
- **2024-04-24 22:00:58 - 22:08:10**
- **2024-04-25 15:31:09 - 15:33:53**

How the discussion evolved over time
- It starts with users complaining that songs are marked non-family-friendly or blocked for seemingly mild content.
- The discussion escalates as users test specific words (“dead,” “roar,” “rampage,” “ass,” “boombox,” “raccoon”) and compare what is blocked versus what is allowed.
- Multiple participants note the inconsistency: more overtly dark or violent phrases sometimes pass while harmless phrases fail.
- Suno team and moderators explain that ChatGPT is used as the moderation layer, and advise users to paste prompts into ChatGPT and ask what might be problematic.
- By April 25, this is treated as a known annoyance rather than a resolved issue; users continue finding odd bans and workarounds.

Key Participants

your_bunny_wrote
- Idea: Feels blocked from making grimdark cyberpunk music because moderation overreaches.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "Did any one knows how to make this stupid 'Prompt flagged for moderation' off my back?"
- Explanation: Direct frustration with moderation barrier.
- "All I want is some bloody music for my Grimdark Cyberpunk session only for my own consumption"
- Explanation: Frames the block as disproportionate to intended private use.

cutelethalpuppy
- Idea: The moderation logic is inconsistent and absurd, especially around demon/hellhound wording.
- Stance: critical
- Attitude: incredulous, annoyed
- Evidence:
- "Demon's kiss is fine but 'Demon's roar' isn't?"
- Explanation: Shows inconsistent allowance of similar dark-themed wording.
- "Hell hound's roar. Allowed: Hell hound's kiss"
- Explanation: Contrasts nearly identical phrases to show inconsistency.
- "Making a song about a Cute Lethal Puppy seems harder than expected..."
- Explanation: Summarizes the struggle caused by moderation.

odd101
- Idea: Blocking the word “dead” is especially unreasonable for rock songs.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "all of a sudden i cant use the words dead tf"
- Explanation: Shows abrupt frustration with a blocked word.
- "rock uses dead as a word alot"
- Explanation: Argues the moderation conflicts with genre conventions.

bigsparkzy

- Idea: Moderation blocks lyrics that are clearly narrative/fictional, and the exact trigger can be absurd.
- Stance: critical
- Attitude: frustrated, bewildered
- Evidence:
- "Does anyone know why these lyrics would flag a moderator?"
- Explanation: Asks why fictional monster lyrics are blocked.
- "It didn't like 'THEIR knees' so I changed it to 'IT'S knees'"
- Explanation: Shows how bizarrely specific moderation triggers can be.

waynedavisrocks
- Idea: Moderation rejects even mild prompts and feels arbitrary.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "keep getting flagged for moderation for only word in the song that might be questionable is Ass??????"
- Explanation: Indicates a specific mild word causing blocks.

Suno Team Response

furrybeans [Suno Team]
- Explained that ChatGPT is the moderation system and suggested using ChatGPT to diagnose why prompts are blocked.
- Evidence:
- "The lyrics get put through ChatGPT and it's basically up to that to try to interpret whether they are 'bad' in some way."
- "General advice given for this situation is to paste your lyrics into ChatGPT and ask it 'what could be bad about these lyrics?'"
- "IMO it'd be better if the Suno website actually asked ChatGPT for you and gave the response instead of the generic 'moderation' error."
- Explanation: Confirms the mechanism and acknowledges the current UX is poor.

3daizy
- Reinforced that the server is PG-13 and that some lyrics will be removed or blocked accordingly.
- Evidence:
- "This discord server is PG13"
- "Did you read this?"
- Explanation: Focuses on community enforcement, though not always on platform-side generation filters.

Additional Evidence

"guys, none of my songs are in new because they are all considered NOT family friendly by the ai"
Explanation: Shows moderation affecting visibility/distribution, not just generation.

"the word dead is flagged from prompt moderation"
Explanation: Another direct complaint about overblocking.

Topic: AI Music Theft, Reposting, and Enforcement on External Platforms

Description

A sustained point of tension concerns third parties stealing Suno songs—especially from the public feed—and reposting them on platforms like YouTube. Users disagree about how serious this is, whether it matters if the songs are free-tier, and what practical recourse exists.

This topic is legal and ethical because it deals with unauthorized redistribution, attribution, and enforcement.

Timeline

- **2024-04-22 19:38:13 - 19:45:52**
- **2024-04-23 02:07:45 - 02:08:10**
- **2024-04-23 08:07:45 - 08:08:10**
- **2024-04-23 09:06:27 - 09:14:52**
- **2024-04-23 09:56:57 - 10:00:04**
- **2024-04-24 08:20:41 - 08:24:26**
- **2024-04-25 15:58:13 - 16:01:03**
- **2024-04-26 08:28:05 - 08:40:03**

How the discussion evolved over time
- Users first complain that free-tier songs can be stolen and reposted while the original user has no ownership.
- Others answer by saying this happens to creators generally and may not be worth much.
- Later, users begin describing specific YouTube theft incidents and DMCA/copyright strikes against reposting channels.
- The discussion becomes more practical: use distributors, upload elsewhere first, or don’t make songs public until ready.
- By April 26, one user reports getting stolen-song channels removed, while others continue debating the seriousness of the issue.

Key Participants

afkderp
- Idea: Song theft is a real concern, especially for free users who can’t protect their work.
- Stance: critical
- Attitude: anxious
- Evidence:
- "it sucks how a random channel can steal your songs if you dont have pro/priemer"
- Explanation: Summarizes the core complaint.
- "they stole clownstep"
- Explanation: Provides a named example.

drakolyr
- Idea: Theft is real, and they are actively filing takedowns; the system should better protect original creators.
- Stance: critical

- Attitude: determined
- Evidence:
- "A guy who stole my songs didnt want to take down my song. I made a removal request by youtube."
- Explanation: Concrete external-platform enforcement example.
- "Now he got a copyright strike"
- Explanation: Shows successful enforcement.
- "It really would help, if Suno would provide paid users the watermark too"
- Explanation: Suggests a practical protection mechanism.

jvarvsev
- Idea: Upload elsewhere first or don’t make Suno songs public.
- Stance: neutral
- Attitude: practical
- Evidence:
- "I always upload on YouTube first before I put it out to public on suna"
- Explanation: Direct risk mitigation approach.

slobo777
- Idea: Theft is common and annoying, but users shouldn’t let it consume them.
- Stance: neutral
- Attitude: resigned
- Evidence:
- "this happens to small time creators of all sorts all the time."
- Explanation: Generalizes the problem beyond Suno.
- "don't let them stress you out as well"
- Explanation: Urges emotional detachment.

Suno Team Response

No response from Suno team in the logs

Additional Evidence

"that backup vocal is awesome"
Explanation: Not relevant to theft; skip.

"that magical point where you realize it might have been cheaper hiring some musicians..."
Explanation: Cost frustration, but not specifically theft/ethics enough here.

Topic: Public Sharing vs Privacy and Whether Users Should Publish at All

Description

Another tension concerns whether creators should share songs publicly on Suno at all. Some users want exposure and trending status; others say public posting invites theft, derivative use, or confusion over rights. This topic is not just practical but tied to legal/moral concerns because public exposure

changes who can access and potentially exploit a work.

Timeline

- **2024-04-22 20:14:14 - 20:15:09**
- **2024-04-22 22:14:49 - 22:26:22**
- **2024-04-23 01:32:05 - 01:39:40**
- **2024-04-23 02:21:41 - 02:23:22**
- **2024-04-23 09:07:01 - 09:31:05**
- **2024-04-26 12:49:01 - 12:53:56**

How the discussion evolved over time
- Users ask what the “Public” button does and whether others can extend public songs.
- Some users say they keep songs private and only publish elsewhere.
- Others want front-page exposure and optimize around listens/likes.
- Team/moderator comments clarify that public songs are eligible for front-page and playlist surfacing, while link-only songs require the direct URL.
- This creates a recurring tradeoff: visibility versus control.

Key Participants

dorkpimp
- Idea: Wants clarity on what “Public” means, especially if public songs can also be extended.
- Stance: neutral
- Attitude: questioning
- Evidence:
- "Anyone have info around the 'Public' button on exactly what it does."
- Explanation: Raises the core issue directly.
- "I ask because it seems you can extend public songs as well?"
- Explanation: Connects publicity with derivative-use concerns.

3daizy
- Idea: Explains that public status is necessary for front-page eligibility and that only public songs are surfaced.
- Stance: neutral
- Attitude: explanatory
- Evidence:
- "Also, remember to set your song's sharing status to public, as only publicly available songs are eligible for the home page."
- Explanation: Clarifies visibility mechanics.

patsuno [Suno Team]
- Idea: Clarifies the distinction between Public and Link-Only and acknowledges the TOS wording needs revision.
- Stance: neutral
- Attitude: clarifying
- Evidence:
- "Public means: 'I allow Suno to surface this song on the front page...'"
- "'Link-Only' means: 'you have to have a link to the song in order to access it'"
- Explanation: This is the clearest platform-level statement on the public/private distinction.

Suno Team Response

patsuno [Suno Team]
- Clarified current privacy/publicity behavior and acknowledged outdated terms.
- Evidence:
- "the relevant distinction for sharing / privacy is the Public vs Link-Only toggle"
- "There is an edge case where user A gives user B a link to a Link-Only song, then user B includes it in a public playlist and now everyone can see it."

Additional Evidence

"don't make your songs public before you published them"
Explanation: A community warning reflecting the control-vs-visibility tradeoff.

Chunk 10: 2024-04-26 to 2024-04-30

Topic: Copyright, Ownership, and Commercial Use of Suno-Generated Songs

Description

A recurring point of tension concerns what users are legally allowed to do with Suno-generated music, especially songs created on free accounts. The discussion includes confusion, disappointment, attempts to clarify rights, and frustration about limitations on commercial use.

The strongest contention centers on whether songs made on free plans can later be monetized, transferred into paid ownership, or used in projects like YouTube videos, webcomics, and Spotify uploads. Several users express dissatisfaction after learning that songs created for free remain non-commercial even if they later subscribe. For example, one user says: “I´m kinda sad that I generated a song in free tier and I love it… and tought that if I pay I could have the rights. *feels bad*”.

There is also tension around edge cases and “grey areas,” such as whether heavily editing clips, using only parts of free-generated songs, or extending free songs while subscribed changes their status. Some users probe these boundaries directly: “what if you only use a small clip, and heavily modify it before upload, to the point that its unrecognizable?” That prompted concern from others that discussing such topics in general chat itself was inappropriate.

A second branch of this topic is about distribution and monetization on external platforms. Users discuss uploading to YouTube, Bandcamp, Spotify, and using distributors, but disagreement and concern persist around what is legally safe and who owns what. Observable tension appears when users ask repeatedly about whether free songs can be commercialized and others respond firmly that they cannot.

This topic is directly tied to ethical/legal issues because it concerns ownership, monetization rights, copyright risk, and potential attempts to bypass restrictions.

Timeline

- **2024-04-26 06:33:50 - 06:41:33**
- **2024-04-26 06:43:43 - 06:48:59**
- **2024-04-26 06:57:17 - 07:01:00**
- **2024-04-26 08:27:29 - 08:31:18**
- **2024-04-26 10:18:46 - 10:19:06**
- **2024-04-26 10:27:24 - 10:33:00**
- **2024-04-26 10:54:38 - 10:55:18**
- **2024-04-26 12:04:18 - 12:09:22**
- **2024-04-26 16:02:20 - 16:05:39**
- **2024-04-26 23:49:21 - 23:56:21**
- **2024-04-27 09:05:56 - 09:17:19**
- **2024-04-27 18:01:41 - 18:01:54**
- **2024-04-29 16:17:16 - 16:19:24**
- **2024-04-30 06:17:16 - 06:19:36**
- **2024-04-30 14:44:34 - 14:49:54**
- **2024-04-30 23:57:33 - 23:59:54**

Evolution over time:
The topic begins with a user worried about copyright problems from a free-tier song and asking whether they can safely upload or monetize it. Other users respond with their understanding that free-tier songs cannot be monetized and must remain non-commercial. The discussion then expands into more complex edge cases: whether becoming a paid user later changes rights, whether edits or clips create “grey areas,” and whether silent watermarks exist. Later, multiple users return to the same issue from different angles—using songs in webcomics, Spotify distribution, and mixed free/paid generation histories. The Suno team response remains cautious and consistent on grey-area extensions, while community members repeatedly assert a stricter rule: free-generated material stays non-commercial. By the end of the logs, the issue is still unresolved emotionally for users, but the practical consensus in the chat is that only songs generated during a paid subscription are safe for commercial use.

Key Participants

undinecat
- Idea: They are worried that a song created on a free account might create copyright trouble if uploaded or used in media, especially because they liked the result and edited it.
- Stance: critical
- Attitude: anxious, careful
- Evidence:
- "I want to use it for my webcomics and I don´t want copyright problems"
- Explanation: This directly shows concern about legal/copyright risk in using an AI-generated song.
- "If I gain a little money with it I kinda afraid of copyrights and everything"
- Explanation: This shows concern specifically about monetization and legal consequences.
- "I´m kinda sad that I generated a song in free tier and I love it... and tought that if I pay I could have the rights. *feels bad*"
- Explanation: This shows disappointment and friction over the free-vs-paid ownership rule.

skeletoriels
- Idea: They explain their understanding that free-account music belongs to Suno and cannot be monetized; they also raise grey-area questions about modified clips.
- Stance: neutral
- Attitude: analytical, inquisitive
- Evidence:
- "Suno owns the rights to all music generated from free acounts"

- Explanation: This is a direct statement of their view on ownership.
- "You can share your music wherever you want, you just can't ((legally)) monetize it unless the song was generated from a paid account"
- Explanation: This clarifies a legal distinction between sharing and monetizing.
- "what if you only use a small clip, and heavily modify it before upload, to the point that its unrecognizable?"
- Explanation: This introduces a legal grey-area question and shifts the discussion toward edge cases.

drakolyr
- Idea: They repeatedly state that free-generated songs remain non-commercial even after subscribing, and they warn that some uses would still count as commercial.
- Stance: neutral
- Attitude: matter-of-fact, cautionary
- Evidence:
- "You cant get money from songs who are from being free. It stays that way, even if you get a sub"
- Explanation: This is one of the clearest restatements of the rule as understood in chat.
- "Then you cant. Its still commercial"
- Explanation: This shows a strict interpretation that promotional use for a webcomic/animation still counts as commercial.
- "Well you can use the songs / As you want"
- Explanation: This distinguishes paid-plan songs from free-plan songs in terms of rights.
- "You can still upload it on Youtube, you must Credit Suno and you cant monetise the Video"
- Explanation: This gives practical guidance tied to the non-commercial interpretation.

mizu.aabbccddeeff
- Idea: They initially minimize copyright risk and say Suno songs are transformative, but later defend discussion of technical/legal grey areas without endorsing ToS-breaking.
- Stance: supportive
- Attitude: casual, defensive
- Evidence:
- "its fair use! its transformative! u dont have to worry"
- Explanation: This downplays legal concern and supports use without much fear.
- "suno doesnt overfit!"
- Explanation: This is another reassurance against copyright risk, though not supported further in the logs.
- "its not. its literally not / were discussing the arch of suno / not advocating breaking it"
- Explanation: These lines show a defensive response when discussion of possible workarounds is criticized.

xixhollow
- Idea: They react to the ownership/monetization discussion and help explain that free songs should not be expected to be monetizable.
- Stance: neutral
- Attitude: blunt, casual
- Evidence:
- "so no you probably dont"
- Explanation: This is a direct reply to concern about uploading/using free-generated songs.
- "if it was possible it would only take 5 away rather than 10"
- Explanation: Though about credits, it shows they are actively shaping practical interpretation of how Suno works in adjacent rights/cost discussions.

ssbmtonberry

- Idea: They ask whether a song begun on a free account but extended under a paid subscription becomes commercially usable.
- Stance: neutral
- Attitude: careful, inquisitive
- Evidence:
- "Commercially, are one allowed to use a song that its first initial part created by a free account, but then extended by a paid subscription?"
- Explanation: This directly raises one of the core legal grey-area questions.
- "so if a full song has been created partially paid, it's like it was all made by a free account, legally?"
- Explanation: This shows the user trying to clarify the legal status of mixed-origin songs.

anyimuoney
- Idea: They ask whether editing free-generated content while subscribed grants commercial rights.
- Stance: neutral
- Attitude: direct, inquisitive
- Evidence:
- "if music content generated as a free user is then edited in the paid subscription, does this grant commercial right to the newly generated content?"
- Explanation: This is another explicit legal ownership question central to the topic.

htt383
- Idea: They ask whether subscribing later allows monetization of songs made before subscribing.
- Stance: neutral
- Attitude: direct
- Evidence:
- "if i buy a year worth of sub, do i get to monetise my pre sub songs?"
- Explanation: This is a concise statement of one of the repeated points of contention.

cjldog
- Idea: They ask whether songs generated while subscribed can be sold to others for projects.
- Stance: neutral
- Attitude: practical
- Evidence:
- "if they could buy songs from me for their projects, I don't know if that is legal"
- Explanation: This introduces the resale/commercial exploitation question.
- "I am a subscriber"
- Explanation: This establishes the condition under which they want legal clarification.

Suno Team Response

furrybeans [Suno Team]
- The team response on free vs paid ownership is cautious and specifically treats extending free-generated material as a grey area that should be avoided.
- Evidence:
- "I just assume that if I extend something from a free generation that essentially it's deriving from it so it seemed a bit of a grey area and I just leave it alone."
- Explanation: This is the clearest Suno-team statement in the logs on mixed free/paid derivation. It does not authorize commercialization and explicitly frames it as uncertain.
- "Probably has no credits left?"
- Explanation: Not directly about rights, but it shows team presence in adjacent free/paid account discussions.
- "I use it to get ideas, though I do use bits of the generated sound..."

- Explanation: This shows a Suno team member’s own workflow with generated content, but does not change the legal/ownership policy question.

Additional Evidence (Optional)

"easy, just dont monetize the place it's posted. Like with youtube as example, you can specify in video editor if you want the video monetized or not."
Explanation: This adds a practical interpretation from a user on how non-commercial use can work in practice.

"no. Just remake them."
Explanation: This concise reply reinforces the repeated community consensus that free songs cannot simply be converted into paid/commercial ones later.

Topic: Song Theft, Fraudulent Reuploads, and Copyright Claims on External Platforms

Description

A major source of friction involves users alleging that their Suno songs are being stolen, reuploaded, or falsely claimed on Spotify and YouTube by other people. This includes both direct theft complaints and frustration with external platform copyright systems, distributors, and automated claim handling.

The issue first appears when users talk about “song stealers” and YouTube removal requests. It then develops into repeated complaints that songs have been uploaded by others “as their own,” including to Spotify and YouTube, sometimes with fake lyricist/composer claims. The discussion shows a mix of anger, resignation, and practical troubleshooting.

The ethical/legal tension is obvious: users are upset that others are claiming authorship or copyright over songs they did not make, and some participants argue that certain systems or policy decisions may encourage theft. One user explicitly says, “thank god it is, otherwise it would encourage people stealing others songs...”

Later, the discussion becomes more detailed around distributors and YouTube Content ID. A participant explains that by allowing songs to be distributed to YouTube, their own attempts to remove fraudulent uploads become harder. This creates a conflict between wanting platform distribution and wanting strong anti-theft control.

Timeline

- **2024-04-26 06:22:17 - 06:29:01**
- **2024-04-26 06:57:57 - 07:07:15**
- **2024-04-26 07:21:58 - 07:23:52**
- **2024-04-26 11:38:25 - 11:39:23**
- **2024-04-26 14:36:24 - 14:49:29**
- **2024-04-27 06:59:04 - 07:12:46**
- **2024-04-28 01:51:47 - 02:04:00**

- **2024-04-30 15:58:45 - 16:00:10**

Evolution over time:
The discussion begins with isolated reports of “song stealers” being removed from YouTube and users filing removal requests. It then broadens to Spotify, where users note that songs are being uploaded under other names or by fake “lyricist and composer” claims. One user says they assume every Suno song they make is stolen. Later, this turns into a more technical/legal discussion of YouTube Content ID and distributors, where users explain that once songs are officially distributed, YouTube may treat some copies as licensed rather than stolen, complicating takedowns. The topic then returns at the end with a broader concern that AI music theft will only become more common and that precedent needs to be set early.

Key Participants

drakolyr
- Idea: They repeatedly report theft of their songs, discuss takedown/removal requests, and explain how platform/distributor systems work in their experience.
- Stance: critical
- Attitude: frustrated but pragmatic
- Evidence:
- "The Song stealer is gone again from Youtube and now all my Removal Requests are active."
- Explanation: This shows ongoing conflict with theft and takedown efforts.
- "my Animal Songs only use 1 weard. Thats why they noticed its AI generated... all other songs went trough without a problem."
- Explanation: This ties theft/distribution problems to platform detection behavior.
- "the Cat Song and other animal song of mine got stolen and already uploaded on Spotify multiple times"
- Explanation: This is a direct allegation of repeated theft.
- "And thank god it is, otherwise it would encourage people stealing others songs..."
- Explanation: This shows their strong anti-theft stance.

iicaptain73
- Idea: They repeatedly report that others have published their songs as their own on Spotify and YouTube, and later describe difficulty taking them down due to distributor/Content ID systems.
- Stance: critical
- Attitude: frustrated, persistent
- Evidence:
- "i just found another who has claimed themselves as lyricist and composer and gone thru some publishing company. Here we go again!"
- Explanation: This is a direct complaint about false attribution and publishing fraud.
- "This same spotify account has published Cat Cat Cat as their own copyright too btw"
- Explanation: Another direct theft allegation.
- "Just make sure it's my version and not the low life scum claiming it is theirs on Spotify"
- Explanation: Strongly worded frustration directed at reuploaders.
- "I just don't want others using my songs"
- Explanation: This captures the core grievance simply.
- "they are denying my takedown request as 'The content that is the subject of your complaint was given under license by a YouTube partner for use by YouTube as an Art Track.'"
- Explanation: This shows the dispute escalating into a platform/legal systems issue.

iceman_neo
- Idea: They express resignation that Suno songs are likely to be stolen.

- Stance: critical
- Attitude: resigned, cynical
- Evidence:
- "I just assume every Suno song I make is stolen by someone lol"
- Explanation: This sums up their view that theft is widespread enough to assume by default.

beardedgrizzy
- Idea: They question whether Spotify/YouTube support AI content and discuss voice/style similarity concerns.
- Stance: neutral
- Attitude: uncertain, probing
- Evidence:
- "are you able to post AI music on spotify? i thought that spotify and itune had a hate hard on for AI content"
- Explanation: This connects platform upload concerns to AI-generated music acceptance.
- "what if the way the voice sounds is apart of the genre? is there any discrepancy there?"
- Explanation: This raises concern over style/voice resemblance as a possible issue.

wetcircuit
- Idea: They report hearing that Soundcloud may block AI music and suggest content detection may be inconsistent.
- Stance: neutral
- Attitude: cautious
- Evidence:
- "hearing people complain that Soundcloud blocked their music for being AI"
- Explanation: This indicates another platform friction point related to AI distribution.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"I only made 52 Songs on Spotify" / "They dont care, as long it doesnt sound 'AI generated'"
Explanation: This adds evidence that platform enforcement is discussed as inconsistent and appearance-based by users.

Topic: Attempting to Bypass or Probe Rights Restrictions, Watermarks, and ToS Boundaries

Description

A distinct ethical/legal tension appears when users discuss whether Suno’s restrictions or watermarking can be bypassed, and whether discussing those possibilities is itself inappropriate. This includes speculation about “silent watermarks,” discussion of whether altered clips would remain detectable, and arguments over whether this kind of talk belongs in general chat.

The conflict is not neutral technical curiosity alone. It becomes contentious because some users see the discussion as bordering on Terms-of-Service evasion, while others defend it as merely analysis. One participant explicitly warns: “Atleast dont discuss such stuff in the General Chat of Suno... breaking ToS.” Another pushes back: “we're discussing the arch of suno / not advocating breaking it”.

This is squarely in the ethical/legal zone because the discussion concerns ways to identify, remove, or evade platform restrictions and watermarking.

Timeline

- **2024-04-26 06:43:43 - 06:48:59**

Evolution over time:
The topic starts when users ask about using “a small clip” that is “heavily modify[ied]” and speculate on whether Suno embeds “silence watermarks” in music. From there, users discuss how such a watermark might exist in waveforms or compression artifacts and whether EQ/filtering could defeat it. Another user then objects that this discussion is inappropriate for general chat and frames it as ToS-breaking, while the original discussants insist they are only analyzing architecture rather than promoting evasion.

Key Participants

skeletoriels
- Idea: They raise the grey-area question of whether heavily modified clips would still count, and speculate technically on watermark survival.
- Stance: neutral
- Attitude: analytical, probing
- Evidence:
- "what if you only use a small clip, and heavily modify it before upload, to the point that its unrecognizable?"
- Explanation: This directly probes a possible rights/workaround grey area.
- "With an equalizer and a filter, I'm not sure a watermark would survive."
- Explanation: This shows technical discussion of defeating/detecting watermarking.

drakolyr
- Idea: They say they heard the devs have silent watermarks and object to discussing bypass-related topics in general chat.
- Stance: critical
- Attitude: cautionary, disapproving
- Evidence:
- "I heard the Dev's have silence Watermarks on the music."
- Explanation: This introduces the watermark topic.
- "Atleast dont discuss such stuff in the General Chat of Suno... breaking ToS"
- Explanation: This explicitly frames the discussion as inappropriate and potentially rule-breaking.
- "Then switch the topic"
- Explanation: This continues the effort to shut down the line of discussion.

mizu.aabbccddeeff
- Idea: They defend the discussion as analysis, not advocacy, and speculate that watermarking may be easy to fool.
- Stance: supportive
- Attitude: defensive, irritated
- Evidence:

- "its not. its literally not / were discussing the arch of suno / not advocating breaking it"
- Explanation: This is a direct defense against the accusation of discussing ToS-breaking.
- "but that means its easy to fool so idk"
- Explanation: This is part of the technical speculation around watermark robustness.

xixhollow
- Idea: They question whether a silent watermark makes sense and whether altering the sound would make watermark detection meaningless.
- Stance: neutral
- Attitude: skeptical
- Evidence:
- "how tf do you have a silent watermark"
- Explanation: This challenges the watermark idea.
- "then if you changed it so it sounds unrecognizable then the watermark could be anything"
- Explanation: This extends the technical skepticism around watermark detection.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"Dont know. I heard the Dev's have silence Watermarks on the music."
Explanation: This is the core claim that starts the watermark thread, though it remains unverified within the logs.

Topic: Moderation, Artist Name Restrictions, and Copyrighted Lyrics in Prompts

Description

Another recurring legal/ethical friction point concerns moderation: prompts or lyrics being blocked, often because users believe they are using copyrighted artist names, copyrighted lyrics, or other disallowed content. There is tension because some users are confused about why content is flagged, while others explain that artist names and copyrighted lyrics are likely causes.

This is directly tied to ethical/legal AI music issues because the moderation is discussed as enforcement against reproducing copyrighted works or naming artists in prompts. For example, one user explains flagged moderation can come from “using a style that's a copyright name of an artist,” and another directly tells a user to remove a posted video because “its not allowed to use existing lyrics in suno songs”.

Timeline

- **2024-04-26 11:01:38 - 11:09:21**
- **2024-04-26 14:36:24 - 14:49:02**
- **2024-04-29 15:41:54 - 15:59:05**
- **2024-04-30 06:36:35 - 06:40:12**

Evolution over time:
This topic begins with users asking why custom prompts are flagged for moderation. Others explain that offensive lyrics or copyrighted artist names in prompts can trigger moderation. Later, users ask how to make songs “like another song,” and are told Suno is not there “to copy songs.” Later still, a user posts a video using existing lyrics and is told to remove it because that violates ToS. By the end, users continue to encounter moderation on lyrics and are advised to ask ChatGPT what part of the lyrics may be problematic.

Key Participants

alikan
- Idea: They explain flagged prompts can result from “using a style that's a copyright name of an artist.”
- Stance: neutral
- Attitude: explanatory
- Evidence:
- "Writing offensive lyrics, using a style that's a copyright name of an artist, etc etc..."
- Explanation: This gives a direct explanation connecting moderation to copyright-sensitive artist names.

allicat4
- Idea: They say moderation means “there’s something in your lyrics it doesn’t like.”
- Stance: neutral
- Attitude: helpful
- Evidence:
- "It means there’s something in your lyrics it doesn’t like"
- Explanation: This supports the moderation enforcement framing, though less specifically legal.

drakolyr
- Idea: They repeatedly advise using ChatGPT to identify why lyrics were flagged and tell users not to copy songs.
- Stance: neutral
- Attitude: practical
- Evidence:
- "You can ASK ChatGPT why its flagged for moderation"
- Explanation: This is repeated practical advice on understanding moderation.
- "You cant say that you want a song like Song XY"
- Explanation: This is a direct boundary about copying songs/styles.

.derbaum.
- Idea: They tell a user to remove a song because using existing lyrics is not allowed and raises copyright issues.
- Stance: critical
- Attitude: firm, cautionary
- Evidence:
- "did you know that its not allowed to use existing lyrics in suno songs?"
- Explanation: This explicitly states the rule about copyrighted lyrics.

- "would you kindly remove the posted video here. we dont want any copyright trouble here"
- Explanation: This shows active enforcement pressure around copyright-sensitive content.
- "Because i am not a official SUNO team member... just a guide here."
- Explanation: This clarifies role while still insisting on caution.

skeletoriels
- Idea: They openly say they aimed for “Billie Eilish style,” showing artist-style prompting remains a live issue in chat.
- Stance: neutral
- Attitude: casual
- Evidence:
- "Aimed for Billie Eilish style. will try again tomorrow."
- Explanation: This is a direct example of artist-style prompting being used despite moderation concerns elsewhere.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"You can ask ChatGPT what genre the Song uses and put the Genres inside the Style of Art Box. You cant say that you want a song like Song XY"
Explanation: This captures the community’s workaround and their understanding of what is and is not allowed.
