Suno Community Analysis: suno_chat_2024_05

Generated: 2026-04-01 17:44

Chunk 1: 2024-05-01 to 2024-05-05

Topic: Using Free-Plan Songs for Commercial Use and Ownership

Description

A recurring point of tension is whether songs made on the free plan can later be commercialized, especially after upgrading to a paid plan or extending earlier free-plan generations. The discussion includes confusion, dissatisfaction with the rule, attempts to find loopholes, and explanations from moderators. The tension is ethical/legal because users directly discuss ownership, monetization, “loop holes,” and possible system abuse.

The contention centers on a clear disagreement between what users want and what moderators explain the rules to be. Some users criticize the policy as a poor incentive for trying Suno first, while moderators emphasize that allowing retroactive monetization would enable abuse.

Timeline

- **2024-05-01 08:12:58–08:31:10**
- **2024-05-01 08:48:09–08:57:14**
- **2024-05-01 09:10:01–09:12:47**
- **2024-05-05 09:03:47–09:16:33**
- **2024-05-05 15:45:14–15:48:44**

Evolution over time:
- The issue starts with users asking if upgrading from Basic/free to Pro makes older songs commercially usable.
- Moderator-style responses clarify that only songs created under a paid plan can be monetized.

- Users then push edge cases: mixed free/paid songs, remaking similar songs later, buying rights to earlier free songs, and whether watermarks would expose unauthorized monetization.
- Some users openly criticize the policy as discouraging adoption after trial use.
- Later messages continue revisiting the same rule, showing the friction remains unresolved for users who want to reuse earlier songs commercially.

Key Participants

indezign
- Idea: Wants to know whether songs created on Basic/free become covered by Pro commercial terms after upgrading; later says the current rule is not ideal for trial users.
- Stance: critical
- Attitude: polite, mildly frustrated
- Evidence:
- "What if I switch to the monthly Pro Plan – are my creations, I already made with the Basic Plan, covered by the General commercial terms of the Pro Plan?"
- Explanation: This directly asks whether earlier free/basic creations can become commercially usable after upgrading.
- "Imo - it would be great if that changed since many people first try Suno and then see the power of it."
- Explanation: This is explicit criticism of the current policy.

djdef1le
- Idea: Repeatedly probes edge cases about ownership, especially songs partly made with free credits and partly with paid credits, and whether old songs can be upgraded.
- Stance: critical
- Attitude: persistent, inquisitive
- Evidence:
- "So the other tunes I made before I bought the 10,000 Monthly version , are those still under the Free thing or are they automatically upgraded once you own the Paid Version?"
- Explanation: Directly challenges whether payment changes the status of older songs.
- "And what about ones that were Half created with Free Credits and the other half of the song was Paid for?"
- Explanation: Pushes a mixed-ownership edge case.
- "Is there a way to purchase the rights to songs you created for free?"
- Explanation: Shows continued dissatisfaction with the rule and an attempt to work around it.

willf
- Idea: Understands and explains that free-plan songs cannot be commercialized later, but also criticizes this as a poor incentive structure and speculates about enforcement.
- Stance: critical
- Attitude: analytical, calm
- Evidence:
- "I agree. It's not a great incentive to try it out and then subscribe if you are attached to what you created when free."
- Explanation: Explicit criticism of the business/policy effect.
- "I think what's going to be interesting to watch in future is how Suno track and enforce their ownership"
- Explanation: Raises the legal/enforcement dimension directly.

alikan
- Idea: Replies sarcastically to loophole attempts and reinforces that mixed free/paid creation does not create partial ownership in practice.

- Stance: supportive
- Attitude: sarcastic, dismissive
- Evidence:
- "you own half"
- Explanation: Sarcastic response to the idea of mixed free/paid ownership.
- "then you own it. but only the 2nd version"
- Explanation: Suggests only a fully new paid version would be safe, rejecting loophole logic.

deoxnimera
- Idea: Asks whether a paid 3-minute song extended from 20 seconds of an unpaid song can be monetized.
- Stance: neutral
- Attitude: practical
- Evidence:
- "I have a 3 minute song that I made using the paid plan, but its extended from about 20 seconds of a song I made when I did not have a paid plan. Do I have to cut out the first 20 seconds or is it mine since I generated it on my paid plan?"
- Explanation: A clear real-world example of the broader ownership conflict.

soxittome
- Idea: Pushes back against the watermark/ownership logic and suggests Suno may not be able to prove ownership if someone remakes or reprocesses it.
- Stance: critical
- Attitude: skeptical
- Evidence:
- "I dont think anyone can testify you don't own it."
- Explanation: Challenges enforceability.
- "No watermarks. I dont hear any"
- Explanation: Pushes back on the watermark explanation, even after being told it is inaudible.

Suno Team Response

3Daizy
- Explains repeatedly that songs created with free credits cannot be monetized and that only songs created under a paid plan can be commercially used.
- Rejects loophole attempts, including mixed free/paid songs.
- Explains the anti-abuse logic behind the policy.
- Evidence:
- "What you created with the free credits, cannot be monetized. Everything you created under the paid plan can."
- "There are no loop holes.. sorry"
- "If Suno wouldn't do that, people would abuse the system and just buy for a month and made song on the free account only."
- "If you want to monetize it, yes"
- Explanation: These statements directly answer the ownership and commercialization questions, while also giving the rationale for the restriction.

Additional Evidence (Optional)

"officially not.. But you can always try. Just send an email to billing@suno.com
I helped someone yesterday who was able to get the copyright. They gave him permission since he paid premium for a whole year."

Explanation: This suggests exceptions may sometimes be handled manually, but only as a special case, not as the general rule.

Topic: Watermarking and Enforcement of Ownership

Description

A related legal contention concerns whether Suno can technically identify and enforce ownership restrictions through watermarks. Users debate whether watermarks exist, whether they survive editing, and whether they can be used to enforce free-vs-paid restrictions. This is contentious because users are questioning enforcement, not just policy.

Timeline

- **2024-05-01 08:26:57–08:28:02**
- **2024-05-01 08:48:09–08:52:50**
- **2024-05-01 08:56:31–08:56:55**

Evolution over time:
- A moderator introduces the idea that songs contain an inaudible watermark.
- Users question whether such a watermark exists or is detectable.
- The discussion shifts to whether processing the file in a DAW could remove it.
- The moderator states that, according to the devs, it would still remain recognizable.

Key Participants

3daizy
- Idea: Says songs contain an inaudible watermark and that Suno can recognize tracks unless remade with real instruments.
- Stance: supportive
- Attitude: matter-of-fact
- Evidence:
- "There is an inaudible watermark in your songs."
- Explanation: Direct assertion that technical tracking exists.
- "So unless you remake it with real instruments, Suno can always recognize the tracks and bring it back where it came from."
- Explanation: Explicit claim about enforcement capability.

soxittome
- Idea: Doubts the practical existence/usefulness of the watermark and suggests ownership could still be claimed.
- Stance: critical
- Attitude: skeptical
- Evidence:
- "No watermarks. I dont hear any"
- Explanation: Rejects the watermark idea based on audible evidence.
- "Theres ways to claim you own it or ways you can recreate it"

- Explanation: Suggests technical/legal workarounds.

willf
- Idea: Questions whether DAW reprocessing would negate the watermark.
- Stance: neutral
- Attitude: analytical
- Evidence:
- "wouldn't reprocessing a song in your DAW negate that?"
- Explanation: Raises a concrete technical challenge to the watermark enforcement idea.

shiroken
- Idea: Supports the possibility of hidden non-audible watermarks.
- Stance: supportive
- Attitude: matter-of-fact
- Evidence:
- "watermarks can be hidden in audio that dont even register as sound"
- Explanation: Backs up the moderator’s explanation.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"Not according to the Devs ■■■■"
Explanation: Moderator cites dev guidance to answer the challenge about whether reprocessing removes the watermark.

Topic: Copyright / Infringement Risks from Covers, References, and Remix-Like Uses

Description

Another clear area of ethical/legal friction concerns whether users can reference, cover, or upload material derived from existing copyrighted works or specific songs. This appears in questions about using song references, making “coverish” songs, uploading tribute tracks, or wishing for remix/reference features. The discussion becomes contentious because users want features or usage patterns that quickly raise copyright problems.

Timeline

- **2024-05-01 05:36:23–05:36:49**
- **2024-05-01 14:29:23–14:31:02**
- **2024-05-01 21:54:47–21:56:13**
- **2024-05-03 22:46:45–22:55:54**

Evolution over time:
- One user asks about including a song reference or negative prompts to avoid certain instruments.
- Later, a user asks if Suno can create variations from a real song, which is immediately framed as a copyright problem.
- Other users later post songs using copyrighted lyrics and moderators intervene.
- The issue evolves from speculative feature requests into active moderation/enforcement.

Key Participants

samdalfthegrey
- Idea: Wants a way to input a real song and have Suno generate variations of it.
- Stance: neutral
- Attitude: curious
- Evidence:
- "Just wondering is there a way to input a real song and then this makes variations of it"
- Explanation: Directly asks for a function with obvious copyright implications.

iicaptain73
- Idea: Opposes such a feature on copyright grounds.
- Stance: critical
- Attitude: firm
- Evidence:
- "that would be a terrible feature IMHO"
- Explanation: Rejects the proposed functionality as problematic.

furrybeans [Suno Team]
- Idea: Acknowledges that such a feature would open a “copyright wormhole,” though it could be useful for original songs.
- Stance: critical
- Attitude: wry
- Evidence:
- "*Copyright wormhole expands*"
- Explanation: Directly flags copyright danger.
- "It'd be really useful for original songs though"
- Explanation: Distinguishes safe and unsafe use cases.

darklordshadow
- Idea: Asks whether making public a “coverish” version using Imagine Dragons lyrics violates rules.
- Stance: neutral
- Attitude: cautious
- Evidence:
- "I took the lyrics of demons by imagine dragons and did a female cover of sorts, but I don't want to make it public if it breaks any rules I'm not aware of."
- Explanation: Explicitly raises concern about whether a cover using copyrighted lyrics is allowed.

shiroken
- Idea: Calls out a user for posting a song that used copyrighted lyrics.
- Stance: critical
- Attitude: accusatory
- Evidence:
- "Yo you stole their chorus thats against the tos"
- Explanation: Direct accusation of copyright/TOS violation.

3daizy
- Idea: Moderates and states that songs violating Suno ToS cannot be posted.
- Stance: supportive
- Attitude: firm
- Evidence:
- "You have to remove it.. you cannot post songs here which violate Sunos TOS"
- Explanation: Direct moderation action based on copyright/TOS concerns.

Suno Team Response

furrybeans [Suno Team]
- Flags remixing from real songs as a copyright problem.
- Notes that remix/reference-like functionality would be useful only for original works.
- Evidence:
- "*Copyright wormhole expands*"
- "It'd be really useful for original songs though"

Additional Evidence (Optional)

"how about to include a song reference?"
Explanation: Shows users are actively probing reference-based prompting, which sits near the same copyright boundary.

Topic: AI Music Ownership, Theft, and Reuploading by Other Users

Description

There is sustained friction over other people stealing or reposting AI songs, and over whether AI songs can be protected at all. This is an ethical/legal issue because users discuss ownership, attribution, copyright disputes, YouTube claims, and stolen uploads.

Timeline

- **2024-05-01 13:06:28–13:14:26**
- **2024-05-01 16:54:58–16:55:43**
- **2024-05-01 17:11:03–17:15:39**
- **2024-05-01 17:24:59–17:28:02**

Evolution over time:
- One user reports a YouTube channel filing a counter-dispute claiming AI work cannot be copyrighted.
- Others discuss human authorship and how added lyrics or production may matter.
- Later, users discuss uploading to YouTube to protect songs before bots steal them.
- Some users ask generally whether people have had copyright problems with Suno music.
- Examples of songs being stolen or reposted are discussed directly.

Key Participants

iicaptain73
- Idea: Reports someone stole his song and falsely argued AI cannot be copyrighted; emphasizes human authorship in lyrics and production.
- Stance: critical
- Attitude: frustrated, legalistic
- Evidence:
- "One of the YT channels who stole my song lodged a counter dispute trying to claim the whole 'you can't copyright AI work'"
- Explanation: Direct report of a copyright dispute involving stolen work.
- "conveniently leaving out the two sections involving Human Authorship eg, lyrics, additional recording, mixing and mastering"
- Explanation: Gives his basis for claiming rights.

aschubert
- Idea: Argues that adding your own lyrics makes the work transformative/copyrightable.
- Stance: supportive
- Attitude: confident
- Evidence:
- "once you add your own lyrics that it becomes copyrightable. That's transformative in the eyes of the court!"
- Explanation: Supports the legal argument for protectable authorship.

great_paimon
- Idea: Advises uploading to YouTube first to defend copyright because bots steal from trending lists.
- Stance: supportive
- Attitude: practical
- Evidence:
- "Uploading to YT first is a good way to defend your copyright/work too. There are bots stealing from trending list"
- Explanation: Shows theft/reuploading is a known enough issue to shape user strategy.

drakolyr
- Idea: Says his cat song was stolen and he had to take videos down on YouTube.
- Stance: critical
- Attitude: matter-of-fact, annoyed
- Evidence:
- "I had many problems, my cat song was stolen and i put some videos down on Youtube"
- Explanation: Direct example of theft and enforcement action.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"Being hand picked by Suno itself sure does yeah"
Explanation: This shows why trending/showcase placement can increase visibility and likely theft risk, reinforcing the later warnings about bots scraping content.

Topic: Moderation and Censorship of Lyrics / Violent or Sexual Content

Description

The most frequent ethical friction in the logs concerns lyric moderation: users object to words or phrases being blocked, criticize the opacity of moderation, and try to work around filters for violent, sexual, or profane content. Others push back, explain that moderation is contextual, or remind users of PG-13 Discord rules. This is both ethical and policy-related, since it concerns content limits and community standards.

Timeline

- **2024-05-01 02:14:51–02:16:55**
- **2024-05-01 08:42:04–08:46:12**
- **2024-05-01 12:12:13–12:16:19**
- **2024-05-01 12:24:14–12:29:37**
- **2024-05-01 12:55:41–13:02:02**
- **2024-05-02 00:00:49–00:07:45**
- **2024-05-04 04:43:57–04:46:47**
- **2024-05-05 16:56:23–17:01:06**

Evolution over time:
- Users first complain that they cannot tell which word or phrase triggered moderation.
- Others suggest pasting lyrics into ChatGPT to diagnose issues, because ChatGPT appears to be the moderation layer.
- Users then debate what kinds of profanity are allowed, especially in rap/erotic/comedic contexts.
- Moderators remind users that the Discord itself is PG-13, which is separate from what Suno may generate privately.
- Later, a Suno team member explicitly says the modbot is overzealous and being worked on.
- The debate keeps recurring as users continue to run into blocked prompts.

Key Participants

Deleted User (05-01 02:14:51 / 16:14:51 / later moderation complaints)
- Idea: Wants more transparency about which words or contexts are being blocked, and complains moderation blocks acceptable-looking lyrics.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "Id like a way to see which word is banned cuz im writing lyrics and it wont work."
- Explanation: Direct complaint about opaque moderation.
- "already had chatgpt rewrite it 3x and 3x its not allowed"
- Explanation: Shows repeated failed attempts and frustration.

badbojus
- Idea: Wants to write explicit/edgy hip-hop or erotic-style songs and views the censorship as an obstacle.

- Stance: critical
- Attitude: frustrated
- Evidence:
- "do you know if people who have pro plan will be able to make hip-hop songs ? (hip-hop needs to have bad words cmon...)"
- Explanation: Openly criticizes moderation limits as incompatible with the genre.
- "i just can't understand why you can't make lyrics with whatever."
- Explanation: Explicitly opposes the moderation principle.

thellibrarian
- Idea: Questions why Suno doesn’t use age verification or at least tell users what is flagged.
- Stance: critical
- Attitude: dissatisfied
- Evidence:
- "why dont they introduce a age verification system or something"
- Explanation: Suggests a policy alternative to current moderation.
- "or atleast actually say what it finds to be flaggable in lyrics, then"
- Explanation: Asks for transparency in moderation.

wetcircuit
- Idea: Explains that moderation is contextual, tied to ChatGPT, and the Discord itself is PG-13; also tells users how to work around issues or keep things within rules.
- Stance: supportive
- Attitude: firm, sometimes sarcastic
- Evidence:
- "ChatGPT seems to allow swear words. what it doesn't allow is violence, murder, explicit sex, and self-harm."
- Explanation: Gives a clear summary of moderation boundaries.
- "Who do you think is going to censor you? We are asking that THIS DISCORD is kept PG-13."
- Explanation: Distinguishes song generation from Discord posting rules.
- "No, very unlikely. Put on your bigboy pants and figure out how to get around the censor."
- Explanation: Firm and mocking response to censorship complaints.

3daizy
- Idea: Repeatedly enforces PG-13 chat standards and explains moderation decisions.
- Stance: supportive
- Attitude: firm, corrective
- Evidence:
- "Keep in mind.. this discord is PG13 though ■"
- Explanation: Reasserts the community rule.
- "# ok kids.. calm down. it's still PG 13 and you are pushing it"
- Explanation: Direct intervention in escalating profanity discussion.

patsuno [Suno Team]
- Idea: Clarifies that the modbot is overzealous, there are no long-term consequences to being flagged, and asks users to keep Discord chat PG-13.
- Stance: supportive
- Attitude: clear, calm
- Evidence:
- "Getting flagged by the modbot just cancels the generation and has no long-term consequences. it's a little overzealous atm and we're working on it."
- Explanation: This is the clearest Suno-team statement on moderation behavior.

- "If you wouldn't say it in the parking lot of a Wendy's in front of a bunch of kids, probably doesn't make sense to post here"
- Explanation: Gives a vivid rule-of-thumb for Discord conduct.

Suno Team Response

patsuno [Suno Team]
- Says the modbot is overzealous, flags do not cause long-term penalties, and asks users to keep Discord postings chill/PG-13.
- Evidence:
- "Getting flagged by the modbot just cancels the generation and has no long-term consequences. it's a little overzealous atm and we're working on it."
- "please keep it chill in the discord"

furrybeans [Suno Team]
- Says the wording “flagged for moderation” may sound harsher than it is and suggests friendlier wording.
- Evidence:
- '"Flagged for moderation" makes it sound like it's being reported to someone (imo) so that probably makes it sound more serious than it is.'
- '"Those lyrics do not seem appropriate"'

Additional Evidence (Optional)

"Not many words are banned but it's the full sentence and context."
Explanation: This supports the contextual, non-wordlist-based moderation interpretation repeated by several users.

Topic: Ethical Friction About AI Replacing or Undermining Human Musicians / Creative Labor

Description

There is recurring tension over whether AI music threatens musicians, beatmakers, or the broader music industry. Some users defend AI as still requiring work and skill, while others say it may replace certain roles or make traditional labor obsolete. This is an ethical issue because it concerns value, labor, and displacement by AI.

Timeline

- **2024-05-01 15:25:26–15:29:29**
- **2024-05-01 16:59:57–17:02:09**
- **2024-05-01 17:05:05–17:05:29**
- **2024-05-01 17:25:26–17:28:21**
- **2024-05-04 21:19:38–21:24:57**
- **2024-05-05 15:25:53–15:31:00**

Evolution over time:
- Users first defend AI work as still involving labor, comparing it to CGI.
- Others say real artists are not yet threatened.
- A user quotes a friend saying AI means it is “time to hang my coat.”
- Team members reply that editing skills and post-production still matter.
- Later, users discuss AI as an “instrument” rather than a one-click replacement.
- The tension stays unresolved but is explored from both optimistic and anxious angles.

Key Participants

captainpollutiontv
- Idea: Defends AI music as involving substantial work and rejects the idea that it is effortless.
- Stance: supportive
- Attitude: frustrated but upbeat
- Evidence:
- "And yet some people say AI content doesnt require work. Kinda crazy"
- Explanation: Direct pushback against devaluing AI-based creation.
- "I did spent countless days, weeks, months with AI."
- Explanation: Frames AI creation as labor-intensive.

kakermix
- Idea: Compares AI criticism to anti-CGI attitudes and describes AI tools as a new form of labor, not necessarily lazy or trivial.
- Stance: supportive
- Attitude: analytical
- Evidence:
- "how many people say CGI is 'lazy' while completely ignoring all the effort it takes"
- Explanation: Draws a direct analogy to another technology once dismissed.
- "It's just different work."
- Explanation: Explicitly reframes AI creation as labor, not absence of labor.

Deleted User (17:29:57)
- Idea: Says a musician friend felt AI meant “time to hang my coat.”
- Stance: critical
- Attitude: uneasy
- Evidence:
- 'he was like, "Welp, looks like I had a short go at this, time to hang my coat"'
- Explanation: Presents AI as discouraging to human musicians.

furrybeans [Suno Team]
- Idea: Says AI works best alongside music software/editing, suggesting human production skills remain valuable.
- Stance: supportive
- Attitude: practical
- Evidence:
- "It's even better if you have familiarity with editing tools or music software because you can sample stuff and add to it"
- Explanation: Directly frames AI as augmenting, not replacing, human work.

drakolyr
- Idea: Explicitly says AI will never replace real artists.

- Stance: supportive
- Attitude: confident
- Evidence:
- "AI will never replace real Artists"
- Explanation: Clear anti-replacement stance.

incognitobaboon
- Idea: Suggests beatmakers specifically may be threatened more than singers/songwriters.
- Stance: critical
- Attitude: serious
- Evidence:
- "Ai won't kill singers or songwriters, but beatmakers are gonna be joining blacksmiths and cobblers in memory soon"
- Explanation: Directly predicts partial labor displacement.

Suno Team Response

furrybeans [Suno Team]
- Positions AI music as stronger when combined with human editing and music software skills, implying human contribution remains central.
- Evidence:
- "you can sample stuff and add to it, instead of hoping the AI will give you what you want 100%"

Additional Evidence (Optional)

"the computer did most of the work ■"
Explanation: A top creator downplays their own role, which indirectly shows why the debate over creative labor keeps surfacing.

Chunk 2: 2024-05-05 to 2024-05-10

Not enough evidence in the logs for broad recurring ethical/moral/legal conflict across multiple users. Most of the chat is about making songs, prompts, troubleshooting, and sharing outputs. The clearest ethical/moral/legal contention topics explicitly present are below.

Topic: Content Moderation and Censorship of Lyrics

Description

This is the strongest ethical/moral contention in the logs. Multiple users criticize Suno's moderation for blocking songs involving violence, insults, parody, politics, or other sensitive content, while Suno team members explain that moderation is driven by ChatGPT and sometimes suggest workarounds like misspelling words. The tension is about whether the moderation is too strict, inconsistent, or justified.

The discussion includes complaints such as "the censorship is so dumb," frustration that parody lyrics and "yo mama" jokes are blocked, and concern that anti-political lyrics are treated differently from other dark material. Suno team responses defend some moderation decisions, explain the tooling behind it,

and suggest evasion techniques like misspelling flagged words.

Timeline

- **2024-05-05 23:54:46 - 2024-05-06 00:08:55**
- **2024-05-06 10:34:37 - 2024-05-06 10:55:22**
- **2024-05-08 00:04:02 - 2024-05-08 00:08:25**
- **2024-05-09 06:30:55 - 2024-05-09 06:41:17**
- **2024-05-10 15:28:58 - 2024-05-10 15:30:09**
- **2024-05-10 18:28:51 - 2024-05-10 18:31:25**
- **2024-05-10 05:42:20 - 2024-05-10 05:46:55**

Evolution
- The first major exchange starts with a user frustrated that parody lyrics about Death Note and yo-mama jokes are blocked.
- Other users speculate on which specific lines trigger moderation.
- Suno Team explains that “ChatGPT does the moderation,” says the text may be interpreted as a threat, and advises misspellings or rewording.
- The same issue later broadens to political lyrics, where users say anti-political or current-conflict songs trigger moderation.
- Suno Team and other users continue framing the issue as moderation behavior rather than a specific product bug.
- Later messages show recurring low-level frustration with the censor, but without a fresh large debate.

Key Participants

xtosca2
- Idea: Says moderation is too strict and blocks harmless parody or joke content, especially Death Note parody lyrics and yo-mama jokes.
- Stance: critical
- Attitude: frustrated, mocking
- Evidence:
- "why is the generation so strict. I mean come on I'm trying generate a parody song ab Death Note"
- Explanation: Direct complaint that the moderation is overly restrictive.
- "the censorship is so dumb lmao ■"
- Explanation: Explicit negative judgment of the censorship system.
- "it seems super sensitive to anything 'insulting' in like any capacity"
- Explanation: Summarizes their view that the filter is overly broad.

tim_27
- Idea: Joins specifically to complain about the censors.
- Stance: critical
- Attitude: sarcastic, annoyed
- Evidence:
- "Same that's why I came here looking for a place to complain about the censors ■"
- Explanation: Clear statement that censorship is a complaint topic for them.

great_paimon
- Idea: Suggests ChatGPT moderation can behave inconsistently or misleadingly.
- Stance: critical
- Attitude: skeptical, amused
- Evidence:

- "Nah, could be GPT gaslighting people again lol"
- Explanation: Casts moderation behavior as unreliable or misleading.
- "GPT really took offense to that ■"
- Explanation: Frames moderation as oversensitive.

whatisagoodname1
- Idea: Tries to identify likely trigger phrases and suggests practical edits.
- Stance: neutral
- Attitude: practical
- Evidence:
- "Its prob the dead part"
- Explanation: Offers a concrete guess about what triggered moderation.
- "Just take out the once L is dead and try that"
- Explanation: Provides workaround advice rather than arguing policy.

joshuasodil
- Idea: Helps identify suspect phrases and suggests euphemisms.
- Stance: neutral
- Attitude: practical, lighthearted
- Evidence:
- "\"your lifes doomed to end\" ?"
- Explanation: Points to a likely moderation trigger in the lyrics.
- "or saying like theyre 6 feet down, euphemisms"
- Explanation: Suggests alternative phrasing to evade the filter.

furrybeans [Suno Team]
- Idea: Explains moderation is necessary, handled by ChatGPT, and can misread context; also says preventing yo-mama jokes is arguably moderation “doing its job.”
- Stance: supportive of moderation
- Attitude: matter-of-fact, occasionally sarcastic
- Evidence:
- "Unfortunately there are idiots in the world and provisions have to be made to deal with them."
- Explanation: Defends why moderation exists.
- "ChatGPT does the moderation so basically you have to make it unable to figure out the context."
- Explanation: Explains the moderation mechanism and workaround.
- "It sounds like the moderation is doing its job if it's preventing \"yo mama\" jokes."
- Explanation: Explicitly endorses at least some moderation outcomes.

alliecat4
- Idea: Argues that if the filter detects current-conflict politics, the message was probably too explicit.
- Stance: supportive / neutral
- Attitude: dismissive
- Evidence:
- "Anything the filter can tell is about a current conflict is probably about as subtle as a brick to the head anyway…."
- Explanation: Suggests the moderation outcome is understandable if the political content is obvious.

zpti
- Idea: Says Suno’s censor behaves inconsistently and especially dislikes anti-political songs.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "Suno’s censor will."

- Explanation: Asserts the problem lies with Suno’s censorship.
- "my normal macabre lyrics go through without a hitch. But the moment I make an anti political songs, nothing goes through."
- Explanation: Directly describes inconsistency in what moderation allows.

moony1993
- Idea: Says they also had to work around censorship for songs about current events.
- Stance: critical / neutral
- Attitude: matter-of-fact
- Evidence:
- "there were some portions that went into review, and I had to play around a bit to get it past the censor sensors"
- Explanation: Confirms censorship friction and workaround behavior.

Suno Team Response

furrybeans [Suno Team]
- Defends the existence of moderation as necessary.
- Explains that ChatGPT performs moderation and may misunderstand context.
- Suggests misspelling or rephrasing as a workaround.
- Says some blocked content, like yo-mama jokes, may reflect moderation working as intended.
- Evidence:
- "ChatGPT does the moderation so basically you have to make it unable to figure out the context."
- "It probably reads like a death threat"
- "Try mis-spelling \"dead\"."
- "It sounds like the moderation is doing its job if it's preventing \"yo mama\" jokes."

Additional Evidence (Optional)

"cant even write a parody song based on an anime smh"
Explanation: Shows the user frames the issue as a limitation on parody and creative expression.

Topic: Copyright / Ownership / Voice-Likeness and Distribution Concerns

Description

This topic contains several smaller but related ethical/legal tensions: whether users can imitate artists or songs, whether AI songs can be distributed to Spotify/YouTube, and whether voice likenesses or fake apps create legal or fraud risks. The strongest conflict is less between users and more between user desires and platform/legal constraints.

Some users ask how to copy styles like Batman themes, specific artists, or voices. Others discuss whether AI music can be uploaded to Spotify and who owns rights. Suno team and knowledgeable users repeatedly point to restrictions, paid-plan ownership, and risks around impersonation and fake apps.

Timeline

- 2024-05-05 23:43:43
- 2024-05-06 02:52:38 - 2024-05-06 02:54:26
- 2024-05-06 06:26:23 - 2024-05-06 06:28:32
- 2024-05-06 09:11:32 - 2024-05-06 09:18:38
- 2024-05-06 09:31:51 - 2024-05-06 09:38:19
- 2024-05-06 14:45:41 - 2024-05-06 14:54:21
- 2024-05-07 00:26:23 - 00:27:04
- 2024-05-07 00:47:15 - 00:54:21
- 2024-05-07 21:31:19 - 21:33:43
- 2024-05-08 00:09:48 - 00:24:05

Evolution
- Users first casually ask about posting “fake band” music to Spotify and joke about monetizing songs with potentially conflicting titles.
- A more direct legal question appears around whether Suno can replicate artist voices.
- Later, users ask how to recreate copyrighted themes and are told to describe style rather than copy directly.
- Another cluster concerns licensing rights: paid accounts can monetize, free accounts cannot.
- A separate legal/fraud thread appears around fake Suno apps and websites, where Suno Team explicitly warns they are scams.
- Finally, there is a focused discussion on voice models and impersonation risk; users want reusable AI voice profiles, but the discussion notes legal concerns and “active impersonation.”

Key Participants

steicamel
- Idea: Wants to put a “fake band” on Spotify cheaply.
- Stance: neutral
- Attitude: blunt
- Evidence:
- "What is the cheapest way to put fake band on spotify"
- Explanation: Raises a direct distribution/legal-adjacent question.

jdawg78
- Idea: Jokes about monetizing a song Suno auto-named “Sweet Home Alabama,” while another user warns about DMCA.
- Stance: neutral
- Attitude: joking
- Evidence:
- "Oddly enough, Suno automatically named it Sweet Home Alabama."
- Explanation: Indicates a potentially problematic copyright-adjacent naming issue.
- "I'll put it on Spotify and monetize it. LOL"
- Explanation: Explicit monetization joke around a song with an existing famous title.

arkada64
- Idea: Warns monetizing/uploading a “Sweet Home Alabama” type song could trigger copyright issues.
- Stance: critical / cautious
- Attitude: sarcastic
- Evidence:
- "upload that to youtube and im sure it won't get DMCA at all"
- Explanation: Sarcastically highlights legal risk.

Deleted User
- Idea: Wants to make songs in the style of old Batman or Mario themes.
- Stance: neutral
- Attitude: requesting
- Evidence:
- "I want it to be vegan man"
- Explanation: Indicates they want to parody an existing theme.
- "I know i want the style"
- Explanation: Clarifies they want imitation of a recognizable style.

8u773r
- Idea: Says Suno cannot directly copy songs/artists and advises style description instead.
- Stance: cautious
- Attitude: practical
- Evidence:
- "I don't think it is possible to copy other songs with suno. hence why you can't prompt artists directly with suno."
- Explanation: Directly states a limitation tied to copying existing works.
- "You should be able to describe the song/music style"
- Explanation: Suggests lawful/acceptable alternative behavior.

alliecat4
- Idea: Gives descriptive style suggestions instead of naming copyrighted songs.
- Stance: neutral
- Attitude: helpful
- Evidence:
- "I would start with something like 60s TV theme song, kitschy, cheesy"
- Explanation: Redirects the user from copying a theme to describing it.

bigcd34
- Idea: Incorrectly says people have made songs featuring artists.
- Stance: neutral
- Attitude: matter-of-fact
- Evidence:
- "Yes, people have even made songs feature artits."
- Explanation: Indicates belief that artist-style imitation exists, though no supporting evidence is shown in the logs.

furrybeans [Suno Team]
- Idea: Warns fake Suno apps/sites are scams and explains how they exploit users; elsewhere notes impersonation/deepfake issues are a serious concern.
- Stance: critical of impersonation/fraud
- Attitude: cautionary
- Evidence:
- "There is no official app so yes, it's fake."
- Explanation: Direct team statement about app fraud.
- "they sit on a massive pool of free accounts. You pay them, they leech off of the official service."
- Explanation: Explains scam mechanics.
- "deepfaking stuff is just a risk ■"
- Explanation: Identifies deepfake/impersonation as a reason for caution.

immindragon

- Idea: Would rather have reusable synthetic Suno voice profiles than real-person voice uploads; notes legal risk around voice rights.
- Stance: cautious
- Attitude: analytical
- Evidence:
- "I'd rather be able to save a voice profile from a song to reuse later."
- Explanation: Proposes a safer internal alternative.
- "I'm not sure Suno would want to run into problems with stuff like Tennessee's ... grants a property right to a voice"
- Explanation: Raises legal concern explicitly.

great_paimon
- Idea: Says companies want to avoid “active impersonation.”
- Stance: cautious
- Attitude: matter-of-fact
- Evidence:
- "Basically no company wants to deal with the consequence of an active impersonation"
- Explanation: Summarizes the legal/reputational risk.

jimpix_one
- Idea: Asks whether generated piano can be used commercially or for free.
- Stance: neutral
- Attitude: formal
- Evidence:
- "Would it be possible to use them for free, or is there a licensing fee associated with their use?"
- Explanation: Direct legal/licensing question.

alliecat4
- Idea: Explains paid account rights vs free-account restrictions.
- Stance: neutral
- Attitude: informative
- Evidence:
- "Paid account has full rights and you can use it for anything. Free account, you need to credit suno and it can’t be monetized."
- Explanation: Summarizes licensing distinction discussed in the logs.

Suno Team Response

furrybeans [Suno Team]
- Confirms there is no official app and fake apps are scams.
- Explains fake sites exploit free accounts and can be blocked.
- Says deepfake/impersonation risks make voice-cloning features problematic.
- Evidence:
- "There is no official app so yes, it's fake."
- "the fake sites also have pretty lax security, of course, because they just want the money."
- "deepfaking stuff is just a risk ■"

Additional Evidence (Optional)

"that would be super easy with \"stems\" ... and i have heard that question before. i am super sure the devs know about that people want that."

Explanation: Shows users connect audio editing/export functionality with later commercial or remix uses, but this is more feature discussion than conflict.

Topic: AI Music's Legitimacy vs Human-Made Music

Description

This topic is a philosophical/creative tension rather than a direct fight. Users disagree over whether AI music is "real" creativity, whether it replaces musicians, and whether it should be commercially accepted. Some defend AI as a tool or new medium; others say it feels shallow or less authentic than building music "from the ground up."

Timeline

- **2024-05-06 04:35:08 - 04:45:58**
- **2024-05-06 07:22:36**
- **2024-05-09 17:40:58 - 17:57:08**
- **2024-05-10 05:36:38 - 06:02:04**
- **2024-05-10 18:10:38 - 18:31:24**

Evolution
- Early on, users mostly praise Suno and discuss using it creatively.
- Later, a more reflective argument appears: one user says Suno feels "shallow" compared to making music from scratch, while others argue AI is still a tool and any medium of expression counts as art.
- The discussion broadens into whether AI replaces artists, whether producers already use tools, and whether AI is more like photography or digital production.
- By the end, users are also discussing economic displacement and whether AI belongs in creative industries.

Key Participants

.greey.
- Idea: Says Suno feels shallow compared with making music from the ground up.
- Stance: critical
- Attitude: reflective
- Evidence:
- "After spending two whole weeks generating music with Suno I've determined that it ultimately feels shallow when compared to creating real music from the ground up"
- Explanation: Explicitly contrasts AI output with "real music."
- "Everything it makes just feels derivative"
- Explanation: Further criticism of AI music's originality.

gerentex6816
- Idea: Praises Suno as so good it may replace their regular playlist.
- Stance: supportive
- Attitude: enthusiastic
- Evidence:

- "it is just insane how good Suno is at making music"
- Explanation: Strong praise for AI music quality.

arkada64
- Idea: Says Suno lets them realize music ideas they lacked the talent to make from scratch.
- Stance: supportive
- Attitude: grateful
- Evidence:
- "i never had the talent to make my own from scratch but suno recently has enabled me to take my ideas and finally make them a reality"
- Explanation: Frames AI as enabling creative expression.

jeezisrice
- Idea: Sees AI music as useful, but still distinct from human music; later says he may record his own vocals because human music is “still a lot better.”
- Stance: mixed
- Attitude: candid
- Evidence:
- "I LIKE it but it almost feels like its own genre"
- Explanation: Acknowledges value while distinguishing it from traditional music.
- "Human music is still a lot better then Ai stuff"
- Explanation: Endorses human-made music as superior.

whatisagoodname1
- Idea: Worries about AI becoming a monopoly in music and taking away human creativity.
- Stance: critical / cautious
- Attitude: concerned
- Evidence:
- "I think it would be fine as long as its not the ai doing it by itself. And companies aren't using it as a monopoly for the music industry."
- Explanation: Raises an explicit ethical concern about industry control and human creativity.

c_hw
- Idea: Says AI threatens jobs in creative industries and should not replace them.
- Stance: critical
- Attitude: worried
- Evidence:
- "i dont believe AI should have a place in creative industrys"
- Explanation: Clear opposition to AI in creative professions.
- "all TV and sync work goes to AI people will lose jobs"
- Explanation: Frames the issue as economic displacement.

hf_rugal
- Idea: Defends AI as a tool and compares it to prior technological changes in art and music production.
- Stance: supportive
- Attitude: argumentative, analytical
- Evidence:
- "As a producer, you should understand that this is a wonderful tool for rapid prototyping"
- Explanation: Describes AI as a useful production aid, not pure replacement.
- "The artists who used to work in traditional mediums either learned to use the new tool or they quit art."
- Explanation: Compares AI to prior tool transitions.

.saffryn
- Idea: Says computers have already been “doing the work” in art for decades.
- Stance: supportive
- Attitude: dismissive of anti-AI argument
- Evidence:
- "its been computers doing the work for decades now."
- Explanation: Pushes back against the idea that AI is uniquely disqualifying.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"AI music just seems so much more personal so it's tough not listening to your own stuff"
Explanation: Shows supportive feeling toward AI-generated music as emotionally meaningful, even if not part of the direct legitimacy debate.

Topic: Fake Suno Apps and Scam Risk

Description

This is a legal/fraud-focused tension. Users identify unofficial Suno apps and discuss concern that they steal money, accounts, or misuse the free service. Suno team confirms these are fake and calls them scams.

Timeline

- **2024-05-06 14:45:13 - 14:54:21**
- **2024-05-10 17:19:01 - 17:20:21**

Evolution
- A user finds a suspicious app and says it looks unofficial.
- Suno team confirms there is no app and that these are fake.
- Others discuss the likely scam model: taking payments, stealing accounts, or reselling access to free accounts.
- Later, another user asks if there is an app or browser-only service, and users plus Suno Team reiterate that only the website is real.

Key Participants

darkmatter96
- Idea: Flags a fake Suno app on Google Play and doubts it is official.
- Stance: critical of app
- Attitude: suspicious
- Evidence:

- "Needless to say I highly doubt this is the official Suno app."
- Explanation: Raises the concern directly.

zpti
- Idea: Warns fake apps may steal accounts and says a real app would reduce scam exposure.
- Stance: critical of fake apps
- Attitude: practical
- Evidence:
- "I think it's to steal accounts, rather than getting payment."
- Explanation: Identifies a specific fraud risk.
- "suno needs an app that just mirrors the site. So there's atleast a valid app, rather than 10s of fake traps to fall into."
- Explanation: Says lack of official app enables scams.

.derbaum.
- Idea: Says fake apps charge for free Suno usage and scam users.
- Stance: critical of fake apps
- Attitude: warning
- Evidence:
- "only the website suno.com is real suno. these fake apps scam you"
- Explanation: Direct warning against fake apps.
- "they take payments to let you use the free version of suno... so no rights"
- Explanation: Explains how the scam hurts users.

furrybeans [Suno Team]
- Idea: Officially confirms no app exists and fake sites/apps are scams that leech off free accounts.
- Stance: critical
- Attitude: authoritative, cautionary
- Evidence:
- "There is no official app so yes, it's fake."
- Explanation: Direct team confirmation.
- "they sit on a massive pool of free accounts. You pay them, they leech off of the official service."
- Explanation: Clarifies mechanism of abuse.

Suno Team Response

furrybeans [Suno Team]
- Confirms there is no official app.
- Explains fake apps/sites exploit free accounts and are unsafe.
- Evidence:
- "There is no official app so yes, it's fake."
- "If it works like the fake Suno websites I've seen, they sit on a massive pool of free accounts."

Additional Evidence (Optional)

"always report fake suno apps."
Explanation: Community response reinforces the scam-risk framing.

Topic: Offensive / Hate Content and Server Rule Enforcement

Description

This topic is narrower than lyric moderation. It concerns users posting slurs, racist content, or offensive material in chat or songs, and moderators stepping in. The tension is between some users wanting to push boundaries and moderators enforcing PG-13/family-friendly standards.

Timeline

- 2024-05-06 00:22:36 - 00:23:59
- 2024-05-06 01:55:36 - 02:04:37
- 2024-05-08 12:25:25 - 12:31:59
- 2024-05-09 01:42:51 - 01:47:15
- 2024-05-10 00:04:02 - 00:08:25
- 2024-05-10 20:49:19 - 20:50:27

Evolution
- It begins with blocked slur language being explained as an insult.
- Later, users warn each other away from “pedo suggestive” or similarly inappropriate lyrics.
- On May 6 and May 8, users discuss AI hallucinating the n-word in rap songs; one user suggests reporting it.
- Moderators later time out a user for repeated use of racial language and remove song posts using artist names in misleading ways.
- By May 10, team/mods explicitly state the Discord is “family friendly.”

Key Participants

tarinoitsija
- Idea: Questions why a blocked ethnic slur is considered offensive.
- Stance: critical / confused
- Attitude: incredulous
- Evidence:
- "why is j--aps blocked word??"
- Explanation: Directly challenges a moderation decision around offensive language.

.derbaum.
- Idea: Explains slur blocking and later enforces family-friendly norms.
- Stance: supportive of moderation
- Attitude: corrective
- Evidence:
- "its a insult"
- Explanation: Clarifies why the term is blocked.
- "posting flagged lyrics in a pg13 server is always a 200iq move ■"
- Explanation: Criticizes posting moderated/offensive content in chat.
- "not on this discord. its moderated to family friendly standards."
- Explanation: States server policy explicitly.

shiroken
- Idea: Warns against “pedo suggestive lyrics.”

- Stance: supportive of content limits
- Attitude: serious
- Evidence:
- "Yeah lets stay away from pedo suggestive lyrics on here"
- Explanation: Clear effort to steer conversation away from unacceptable content.

moony1993
- Idea: Notes Suno hallucinating the n-word in rap songs.
- Stance: critical
- Attitude: disturbed/amused
- Evidence:
- "Suno using the n-word in every rap song"
- Explanation: Complains about hate/offensive output from the model.
- "Here's one where it hallucinated the n-word for me"
- Explanation: Gives a concrete example.

wetcircuit
- Idea: Tells users to report the AI output.
- Stance: supportive of moderation
- Attitude: direct
- Evidence:
- "report it."
- Explanation: Responds to offensive AI output with enforcement-oriented advice.

3daizy
- Idea: Enforces a no-slur rule and issues timeouts.
- Stance: supportive of moderation
- Attitude: firm
- Evidence:
- "No N word!"
- Explanation: Immediate moderation response to racial language.
- "you earned a time out for 1 day."
- Explanation: Clear enforcement action.

Suno Team Response

furrybeans [Suno Team]
- States the Discord is moderated for family-friendly content.
- Treats deepfake/impersonation and offensive posting as unacceptable risks.
- Evidence:
- "let's please keep it suno-related here"
- "It's also incredibly easy to find the song IDs ... so they can be blocked ■"
- "No N word!" is from mod 3daizy rather than Suno Team, but it reflects direct enforcement in-channel.

Additional Evidence (Optional)

"posting flagged lyrics in a pg13 server"
Explanation: Shows the chat standard is not just platform moderation but also server-level rule enforcement.

Chunk 3: 2024-05-10 to 2024-05-16

Topic: Using Existing Song Lyrics / Copyrighted Lyrics in Suno

Description

Conflict and caution appear around whether users should input lyrics from existing songs into Suno. The issue is framed as a legal/ethical boundary rather than a technical one. A user asks directly, “has anyone tried using lyrics of an existing song?”, and multiple participants respond negatively, with Suno team members stating this is not allowed and pointing to an agreement shown when using custom lyrics. The discussion then broadens slightly when a moderator/community member says “it’s not a ‘crime’ but please don’t post current songs here,” which softens the moral language while still discouraging use and especially sharing.

The discussion evolved from a direct question into rule clarification and community norm-setting. First came a blunt Suno team answer, then reinforcing user comments, then a more nuanced moderation comment that acknowledges people have done it but should not post such results.

Timeline

- 2024-05-10 19:11:57 to 19:15:20
- 2024-05-10 19:19:24

The discussion starts with a user asking about “lyrics of an existing song,” receives an immediate Suno team prohibition, then other users reinforce that it should not be done. A few minutes later, another participant adds nuance by saying many people likely tried known songs, but posting current songs is not acceptable.

Key Participants

chaos_solo
- Idea: Asked whether people had tried using lyrics from existing songs.
- Stance: neutral
- Attitude: inquisitive
- Evidence:
- "has anyone tried using lyrics of an existing song?"
- Explanation: This is the initiating question for the copyright-related tension.

furrybeans [not counted as non-Suno Team participant for topic participants]
- Not included here because the prompt requests non-Suno Team participants in this section.

zpti
- Idea: Strongly discourages using existing-song lyrics and frames it as something people may have tried but should not do.
- Stance: critical
- Attitude: blunt
- Evidence:
- "Has anyone tried? Definitely.. Should you? **No..**"

- Explanation: This directly rejects the practice and reinforces the prohibition.

the_laughing_man
- Idea: Advises against using existing lyrics and shifts people toward making songs from memes or other inspiration instead.
- Stance: critical
- Attitude: casual, dismissive
- Evidence:
- "Probably just don't do it?"
- Explanation: This is a straightforward discouragement of the practice.
- "you can base your song off anything, like memes."
- Explanation: This suggests an alternative creative approach instead of using existing copyrighted lyrics.

wetcircuit
- Idea: Acknowledges people probably have done holiday songs, but says current songs should not be posted and would be removed.
- Stance: critical
- Attitude: cautionary, lightly humorous
- Evidence:
- "everyone probably did a couple known christmas songs..."
- Explanation: This suggests the behavior has happened in practice.
- "It's not a 'crime' but please don't post current songs here, they will be removed."
- Explanation: This sets a moderation/community boundary around posting such content.

Suno Team Response

furrybeans [Suno Team]
- Says users are not supposed to use existing-song lyrics and references an agreement users accept when using custom lyrics.
- Evidence:
- "You're not meant to do that."
- Explanation: Direct prohibition from Suno team.
- "There's a thing you have to agree to when using custom lyrics for the first time"
- Explanation: Indicates a formal rule or terms acknowledgment tied to custom lyrics.

Additional Evidence (Optional)

"What's the fun in that anyway? Making what's already there?"
Explanation:
This from **zpti** adds a value judgment against reusing existing songs, reinforcing the community norm that original creation is preferable.

Topic: Copyright / Voice and Lyrics Rights in AI-Created Songs

Description

There is recurring tension around what users can legally claim, publish, or imitate with Suno-generated music. This includes several sub-issues that remain tied to copyright and ownership: whether AI-generated songs can violate copyright, whether free-vs-paid affects rights, whether copyrighted lyrics or artist/character references are allowed, and how to distribute songs commercially.

The discussion evolves in several waves. First, users discuss whether Suno could “break copyright law,” including around cover images and lyrics. Later, users ask directly whether AI covers or reusing known lyrics violate copyright, and another user warns about using “Scatman” lyrics. Later still, multiple users ask about ownership and commercial rights, and community replies consistently distinguish between free and paid generation. Finally, there is concern about uploading to distributors and Spotify-like platforms, including whether AI songs get rejected.

Timeline

- **2024-05-10 21:26:44 to 21:33:27**
- **2024-05-10 22:42:08 to 22:43:57**
- **2024-05-10 22:55:04 to 22:55:45**
- **2024-05-11 08:56:33 to 08:57:04**
- **2024-05-11 09:18:47 to 09:24:43**
- **2024-05-11 09:55:33 to 09:55:45**
- **2024-05-11 10:34:54 to 10:38:18**

The topic begins with abstract questions about whether Suno “breaks copyright law,” then narrows to specific cases like AI covers and copyrighted lyrics. It later shifts into practical legal questions: who owns generated songs, what a paid subscription changes, and whether tracks can be uploaded or monetized. By the end, users are discussing platform enforcement and possible hidden watermarking.

Key Participants

hummerek
- Idea: Raises concerns/questions about whether Suno can violate copyright, initially about cover images.
- Stance: neutral
- Attitude: cautious, curious
- Evidence:
- "did you ever catch Suno breaking copyright law?"
- Explanation: Introduces the copyright-law concern directly.
- "It is not in the lyrics, but the cover image"
- Explanation: Narrows the concern to image generation rather than lyrics.

.derbaum.
- Idea: Repeatedly argues that outputs are original-looking and later explains that paid/free status affects rights.
- Stance: neutral
- Attitude: matter-of-fact
- Evidence:
- "they are all original. characters have like 3 legs and so on"
- Explanation: Uses visible AI weirdness as evidence against direct copying.
- "you get the full quality. at the moment the sound of the ai is around the bitrate of the mp3 container"
- Explanation: Discusses technical limits while answering rights/format questions.
- "it was explained that its generated together and the whole system has to be restructured to get it seperated"

- Explanation: Clarifies a rights/technical misunderstanding about stems.
- "for me my credits refill at exactly the time i have clicked to buy the paid sub"
- Explanation: Helps explain subscription mechanics tied to ownership conversations.

isaacrout
- Idea: Warns other users when they appear to be using copyrighted lyrics too directly.
- Stance: critical
- Attitude: cautionary
- Evidence:
- "Ok, bro you're using Scatman's lyrics, thats a violation. I'd take it down quickly"
- Explanation: Explicitly frames copying lyrics as a copyright problem.
- "the song is very much ripping off the full lyrics, and putting in on a different style. Suno's got guidelines about that"
- Explanation: Ties the issue to Suno’s own rules and likely takedown.

vjjv4914
- Idea: Tests or asks whether AI covers violate copyright and suggests they may not.
- Stance: neutral
- Attitude: uncertain
- Evidence:
- "yeah its AI cover. i think the cover is not a violation of copyright."
- Explanation: States a personal view that AI covers may be legally okay, introducing disagreement.
- "does this violate copyright?"
- Explanation: Shows ongoing uncertainty rather than a settled view.

heliostasus
- Idea: Explains that paid subscription users own the music they create and warns against copyrighted lyrics uploads.
- Stance: neutral
- Attitude: cautionary
- Evidence:
- "Paid subscription owns the music created"
- Explanation: Presents a clear ownership distinction.
- "Do not upload copyrighted lyrics into Suno, they will deactivate your account and you will lose everything"
- Explanation: Warns of serious consequences for copyrighted lyric use.

graph1ks
- Idea: Says songs made on free credits can be claimed by Suno and may carry a hidden watermark.
- Stance: neutral
- Attitude: cautionary
- Evidence:
- "the song carries a hidden watermark and there is the possibility of suno, who has the rights to all songs made with free credits, claiming it."
- Explanation: Explains a practical/legal risk of monetizing free-tier songs.

arvenine
- Idea: Raises a hypothetical about deleting a free-tier song and monetizing it anyway, then asks about non-profit upload rights.
- Stance: neutral
- Attitude: probing
- Evidence:

- "what would happen if i made a beat on suno without a subscription then deleted it from suno then monetized the beat after downloading it"
- Explanation: Tests a possible workaround to rights restrictions.
- "for the free stuff i make theyre allowed to be uploaded for non profit like on youtube and soundcloud right?"
- Explanation: Seeks clarification on allowed non-commercial use.

Suno Team Response

furrybeans [Suno Team]
- Explains the technical nature of Suno outputs as mixtures of sounds, which is why stems/clean separations are not straightforward.
- Evidence:
- "It's all just a big mixture of sounds that happen to fit together, based on loads of existing mixtures of sounds."
- Explanation: Clarifies that Suno does not simply keep vocals and instrumentals separately in an accessible way.

patsuno [Suno Team]
- States that trending is not pay-to-play, while acknowledging that more credits let users experiment more.
- Evidence:
- "no, trending isn't pay to play, but having more credits does allow you to experiment more, spend more time editing"
- Explanation: Addresses fairness/monetization concerns around discoverability.

furrybeans [Suno Team]
- Confirms subscription renewal appears tied to purchase time.
- Evidence:
- "Seems to be purchase time."
- Explanation: Helps clarify plan timing in the ownership/commercial-use discussion.

Additional Evidence (Optional)

"What's the fun in that anyway? Making what's already there?"
Explanation:
This from **zpti** frames the copyright issue as not just legal but creatively undesirable.

Topic: Moderation and Censorship of Content in AI Songs

Description

A recurring source of tension is frustration with Suno’s moderation and censorship system, especially around violent, sexual, political, or otherwise sensitive content. Users complain that prompts or lyrics are flagged despite being what they consider harmless, inconsistent, or artistically justified. Others defend the restrictions, explain workarounds, or remind users of server/PG-13 rules.

The conversation evolves from isolated complaints about skipped words and moderation flags into a broader criticism of censorship inconsistency. It also intersects with server policy: political content is discouraged, songs posted in Discord must stay PG-13, and moderators step in when users push boundaries or complain aggressively.

Timeline

- 2024-05-10 21:11:51 to 21:16:40
- 2024-05-11 00:48:39 to 00:51:22
- 2024-05-11 03:05:16 to 03:07:36
- 2024-05-11 08:14:16 to 08:22:50
- 2024-05-11 11:31:34 to 11:32:24
- 2024-05-11 14:20:44 to 14:21:52
- 2024-05-11 14:45:22 to 14:46:23
- 2024-05-11 14:46:49 to 14:47:45
- 2024-05-12 00:24:56 to 00:27:01
- 2024-05-14 11:56:33 to 11:59:19

The issue starts with product complaints about skipped non-curse lyrics and whether paid service should behave this way. It later broadens into moderation of political content, “crime related lyrics,” swear words, and server-side PG-13 enforcement. By 2024-05-12 and 2024-05-14, users are still reporting unexplained moderation flags, and community guidance becomes: ask ChatGPT what likely triggered moderation, alter wording, or accept the system’s limits.

Key Participants

blacknapkins
- Idea: Complains that Suno skips lyrics and questions how they can charge money if the user’s provided words are ignored.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "I don't see how they can charge money for this."
- Explanation: Direct complaint about paying for unreliable lyric handling.
- "when I make 2 extensions and they don't use the words i put in!!"
- Explanation: States the specific issue causing frustration.
- "they were not 'curse' words btw"
- Explanation: Emphasizes that moderation or skipping was not due to explicit wording.

Deleted User (multiple anonymous/deleted posts)
- Idea: Repeatedly probes moderation boundaries for crime-related, sexual, or offensive lyrics; also complains about censorship.
- Stance: critical
- Attitude: provocative, frustrated
- Evidence:
- "can suno not make like swearing or crime releated lyrics?"
- Explanation: Direct question about moderation scope.
- "i put ima break into ur house and still ur grandmas toaster and it flagged it"
- Explanation: Gives a concrete example of a flagged line.
- "AI troll potential so high, too bad that the censorship exist haha"
- Explanation: Frames censorship as a limit on provocative use.
- "The things that should go on frontpage..." not relevant here; omitted.

- "These censors are ridiculous"
- Explanation: Openly criticizes the moderation system.

tigonn
- Idea: Calls ChatGPT censorship inconsistent and annoying.
- Stance: critical
- Attitude: irritated
- Evidence:
- "yeah chatGPT's censorship is so freaking annoyingly inconsistent, I hate it xD."
- Explanation: Strongly criticizes inconsistency in lyric moderation.

great_paimon
- Idea: Attributes moderation to ChatGPT and suggests ways around or understanding it.
- Stance: neutral
- Attitude: practical
- Evidence:
- "It's ChatGPT that makes/moderates the lyrics"
- Explanation: Explains the mechanism behind moderation.
- "I am surprised there is not more instances of the issue"
- Explanation: Acknowledges the problem exists.
- "Ask OpenAI's ChatGPT itself about 'what would censor the following'"
- Explanation: Offers a workaround/diagnostic method.

bateman8135
- Idea: Explains moderation as tied to swearing/sexual language and suggests users may need to self-censor.
- Stance: neutral
- Attitude: matter-of-fact, mildly joking
- Evidence:
- "Means that your lyrics probably contain some words Suno does not like."
- Explanation: Summarizes the flagging problem in simple terms.
- "for examply swearing or sexually suggestive or explicit words"
- Explanation: Lists likely causes.
- "if you are aiming for the 'Parental Advisory' Sticker, you still have to sing yourself"
- Explanation: Jokes that explicit songs are effectively blocked in Suno.

wetcircuit
- Idea: Enforces content rules around politics and PG-13 limits, and explains Discord-side moderation.
- Stance: critical of restricted content in this space
- Attitude: direct
- Evidence:
- "politics are not allowed here."
- Explanation: Clear server rule enforcement.
- "we are judging it on it's song merrits, we are not your emotional therapy dump."
- Explanation: Pushes back on users who expect emotional deference rather than critique.
- "I have to ask you to change your profile name for this server to comply with PG-13 rules."
- Explanation: Shows server moderation extends beyond song lyrics into presentation.

Suno Team Response

furrybeans [Suno Team]

- Confirms moderation comes from context-sensitive filtering and explains why innocent-looking text may still get blocked.
- Evidence:
- "ChatGPT is used for the moderation. So it looks at the context moreso than just the words."
- Explanation: Important clarification about why moderation may seem inconsistent.
- "You can usually get around it by mis-spelling things/using phonetic sounding words to confuse it"
- Explanation: Directly acknowledges a workaround.

suno_z [Suno Team]
- Not directly involved in content moderation topic here.
- Evidence:
- No directly relevant moderation quote beyond system maintenance.

Additional Evidence (Optional)

"i put ima break into ur house and still ur grandmas toaster and it flagged it"
Explanation:
This is one of the clearest examples of a user feeling the moderation is excessive or inconsistent, since the line is framed humorously rather than as a real threat.

Topic: Fairness and Quality of Trending / Front Page AI Music

Description

A major point of tension concerns how songs get onto Trending or the front page, whether the process rewards quality or just luck/memes, and whether effort matters in AI music. This is strongly tied to ethical/aesthetic questions about AI creativity: does effort matter if AI generates the music? do “low effort” meme songs deserve visibility? and should a front page prioritize polished, family-friendly, “clear and crisp” tracks?

The discussion evolves from complaints about one user’s songs not appearing on the front page into a broader debate over artistic effort, luck, quality, and whether criticizing trending songs is unfair to other creators. Later the same user becomes more self-aware and partially backs off, but the friction spreads as others argue about whether AI music quality is mostly luck or still shaped by user effort.

Timeline

- **2024-05-10 21:40:57 to 21:52:57**
- **2024-05-10 22:12:38 to 22:15:15**
- **2024-05-10 22:23:08 to 22:27:18**
- **2024-05-11 01:38:18 to 01:39:21**
- **2024-05-11 04:05:05 to 04:07:47**

The topic begins with frustration from one user about not being represented on the front page, then broadens into a debate on what deserves trending status. Some users defend the value of effort and experimentation, while others say AI makes quality mostly luck-based. Moderators and team members clarify at points that trending is not subscription-based and that communication from staff does happen,

though not constantly.

Key Participants

odd101
- Idea: Criticizes front-page/trending choices as low-effort or not representative of the best possible Suno output, but later concedes that music is subjective.
- Stance: critical
- Attitude: frustrated, later reflective
- Evidence:
- "i have so many lofi tracks but the system doesnt recognize it"
- Explanation: Personal complaint about selection/exposure.
- "wish there was a way to understand sunos front page conditions"
- Explanation: Wants more transparency.
- "the things that should go on frontpage should be 'quality effort music'"
- Explanation: States explicit standard for curation.
- "dude some of the shi i see on frontpage has me wondering how little effort really goes into the creative process of ppl"
- Explanation: Direct criticism of trending content.
- "i think today i've finally accepted trending shit isnt what i thought it was"
- Explanation: Shows the discussion moved him from outright complaint toward resignation.

samsam95_95
- Idea: Argues song quality is mostly luck because AI makes the songs, not humans.
- Stance: critical of human-effort framing
- Attitude: blunt
- Evidence:
- "the quality of songs is 90% luck. AI makes the songs , not humans"
- Explanation: Clear challenge to effort-based arguments.
- "everything is prepared by AI"
- Explanation: Reinforces the same point.

shiroken
- Idea: Some trending songs do not deserve to be there if they are too simplistic or obviously repetitive.
- Stance: critical
- Attitude: dismissive
- Evidence:
- "Some songs dont deserve to be on trending."
- Explanation: Direct criticism of trending quality.
- "How much effort could there possibly be in a 2 verse 1 chorus song generated using chatgpt"
- Explanation: Questions artistic merit/effort of some AI songs.

drakolyr
- Idea: Pushes back against judging songs or creators by apparent simplicity and argues work can be hidden.
- Stance: supportive of creators / critical of unfair judgment
- Attitude: calm, corrective
- Evidence:
- "You never know, how much work got put into a song, even if you think it was simple."
- Explanation: Counters assumptions about effort.
- "I think its more the jealous side, that speak out of you."
- Explanation: Reframes criticism as envy.

- "if all people would tell 'what kind of music' is going to the Front Page, no Music would be there"
- Explanation: Argues curation cannot satisfy everyone.

zpti
- Idea: Says consumers care about the result, not the effort, while also defending experimentation and prompting skill.
- Stance: neutral to supportive of effort
- Attitude: analytical
- Evidence:
- "The consumer never sees the effort, effort doesn't matter in the end result. The result is what matters"
- Explanation: Focuses on audience perception over process.
- "You should visit the profiles of some of the common users of this discord and see the variety of prompting methods"
- Explanation: Argues that user input still matters.

.derbaum.
- Idea: Pushes back against repeated complaining and says this has already been discussed enough.
- Stance: critical of the complaint
- Attitude: impatient
- Evidence:
- "we heard that enough today. thank you very much."
- Explanation: Signals repetition/friction around the complaint.
- "great. we know that. you know that. next point please."
- Explanation: Shows moderator-like impatience with the ongoing argument.
- "it always was memes and music. soon its gone and new stuff is there."
- Explanation: Normalizes trending as transient and mixed.

Suno Team Response

furrybeans [Suno Team]
- Says staff do sometimes engage and specifically notes that a team member had recently chatted in the channel.
- Evidence:
- "also georg was here during the weekend chatting to us in this channel"
- Explanation: Pushes back on the complaint that staff never engage.

patsuno [Suno Team]
- Clarifies that trending is not pay-to-play, while admitting that more credits help experimentation/editing.
- Evidence:
- "no, trending isn't pay to play, but having more credits does allow you to experiment more, spend more time editing"
- Explanation: Direct answer on fairness and premium advantage.

Additional Evidence (Optional)

"you hating on my songs odd ■"
Explanation:
This from **around_once** shows that the abstract criticism of trending songs was being felt by other creators personally, increasing the tension.

Topic: AI Voice / Music Quality and Competing AI Music Tools

Description

There is repeated friction over the quality of Suno's vocal output, noise, and "hallucinations," often in comparison with competing AI tools. Users complain about robotic vocals, weird background artifacts, and poor continuation quality; others defend Suno by saying it still outperforms competitors overall or that people are expecting too much from immature technology.

The discussion evolves from technical complaints into rivalry talk, especially around ElevenLabs and Udio. Some users insist competitors have better singing or cleaner audio, while others push back, arguing that preview songs are cherry-picked and not representative. This becomes less a product support discussion and more a value/fairness dispute over how Suno compares in public perception.

Timeline

- **2024-05-10 19:57:20 to 20:06:17**
- **2024-05-10 20:02:01 to 20:03:55**
- **2024-05-10 23:15:39 to 23:18:58**
- **2024-05-11 09:43:43 to 09:47:16**
- **2024-05-12 02:39:41 to 03:01:28**
- **2024-05-14 23:07:00 to 23:08:42**

The topic starts with "Suno vs ElevenLabs" comparisons, especially on singing quality, with immediate pushback about limited evidence and "trailers." It continues later in complaints about Suno's muffled melodies, metallic noise, robotic vocals, and genre-specific degradation. By the end, community members are discussing practical workarounds and waiting for future versions rather than expecting an immediate fix.

Key Participants

rayan_air
- Idea: Claims ElevenLabs has better singing than Suno.
- Stance: critical of Suno
- Attitude: assertive
- Evidence:
- "elevenlabs now has better singing than suno"
- Explanation: Direct comparative criticism.
- "i think elevenlabs officially has better singing than suno now tho"
- Explanation: Repeats and reinforces the same claim.

stelio
- Idea: Pushes back that ElevenLabs examples are cherry-picked and not enough to judge the product.
- Stance: supportive of Suno / skeptical of competitor claims
- Attitude: dismissive, argumentative
- Evidence:
- "you've heard two dev cherrypicked songs from elevenlabs"

- Explanation: Critiques the evidence basis for claims against Suno.
- "wait until it gets open to the public and people load it full of garbage like they do suno"
- Explanation: Argues real-world testing matters more than demos.

zpti
- Idea: Dismisses ElevenLabs as not proven and points out Suno's strengths in longer lyrical content.
- Stance: supportive of Suno
- Attitude: skeptical, sarcastic
- Evidence:
- "one can be used and the other is nothing more than a glorified trailer at this point?"
- Explanation: Strong skepticism of competitor hype.
- "Brother it can't even do two sentences ... where suno can do two entire paragraphs in one generation."
- Explanation: Concrete product comparison favoring Suno.

darkflash
- Idea: Complains about hallucinated vocals in instrumental songs and asks for refunds.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "I only ask suno to refund my credits if it hallucinates because my instrumental does not need weird vocals"
- Explanation: Clear complaint about audio hallucination quality.

laughingrabbit
- Idea: Says Suno may do older styles better and suggests that distortion may hide AI vocal flaws.
- Stance: neutral
- Attitude: speculative but grounded in text
- Evidence:
- "Suno was best at pop and older styles of music"
- Explanation: Comparative judgment about genre strengths.
- "maybe it's just the distorted sound ... covered up the A.I voice fry"
- Explanation: Suggests a reason why some styles seem better.

vjjv4914
- Idea: Says Suno is weak at heavy metal, especially guitar realism.
- Stance: critical
- Attitude: dissatisfied
- Evidence:
- "suno very weak in heavy metal"
- Explanation: Direct genre-quality complaint.
- "especially guitar"
- Explanation: Specifies the weak element.

Suno Team Response

furrybeans [Suno Team]
- Jokes about the community comparison discourse but also later acknowledges Suno can produce garbage and that quality is inconsistent.
- Evidence:
- "*must not make a joke about the community, must not make a joke about the community*"
- Explanation: Shows awareness of rivalry chatter.

- "Mine does spit out total garbage quite often. But when it delivers, it really does."
- Explanation: Frankly acknowledges inconsistency in Suno quality.
- "Maybe enjoying a vacation with obviously-low-bitrate MP3s somewhere else"
- Explanation: Lightly mocks critics of Suno's audio quality.

Additional Evidence (Optional)

"the upcoming competition has really good vocal quality"
Explanation:
This from **graph1ks** shows that competitor quality is shaping expectations for future Suno improvements, even when users remain on Suno.

Chunk 4: 2024-05-16 to 2024-05-20

Topic: Confusion and Conflict Over Commercial Rights, Ownership, and Terms for Suno-Generated Music

Description

A sustained point of contention concerns what rights users have over music generated with Suno, especially the distinction between free and paid plans, and whether outputs can be posted, monetized, or reused. The tension comes from conflicting answers, repeated requests for proof, and frustration about "wrong info."

The discussion begins with direct uncertainty over legal rights: one user quotes terms that appear to forbid commercial use, while another claims paid users can monetize. This creates repeated back-and-forth over what the Terms of Service and FAQs actually say. The issue escalates because users cite different sources and interpret them differently, prompting complaints that misleading information is being shared. The discussion then broadens into adjacent legal questions: collaboration rights, ownership when free and paid users work together, legality of covers, use of copyrighted lyrics, and whether privately using prohibited material is still against terms.

The conflict evolves from basic confusion to explicit frustration about contradictory guidance. One user says "It got out of control with wrong info being posted," while others defend their earlier explanations by pointing to separate sections of the ToS or FAQ. Moderators participate by linking FAQ material and clarifying that free and paid plans differ, but the exchange still remains tense because users keep asking for precise textual support.

Timeline

- **2024-05-16 12:48:05 to 13:28:36**
- **2024-05-16 15:57:57 to 16:05:46**
- **2024-05-16 20:02:08 to 20:09:29**
- **2024-05-17 15:56:56 to 15:59:59**
- **2024-05-18 10:52:35 to 10:59:07**
- **2024-05-18 20:53:53 to 20:59:57**

How the discussion evolved
- It starts with uncertainty over whether Pro users can commercially use songs, triggered by a quoted passage that appears to ban commercial use.
- Other users counter that paid users can monetize, and moderators/knowledgeable users begin linking the FAQ rather than relying only on the ToS excerpt.
- The conversation shifts to edge cases: collaborations between free and paid users, using one's own lyrics in a live re-recording, and whether covers or derivative versions are allowed.
- Later, users discuss distribution to Spotify and other services, with some warning that distributors may reject AI music, while others explain paid-plan ownership more confidently.
- The topic resurfaces when users ask if they can post on YouTube or monetize, and another user notes the lyrics of a song are "a straight rip of the ToS," showing the issue remains active and recurrent.

Key Participants

biscuitbarrel_611
- Idea: Repeatedly challenges claims that paid users own or can commercially use their songs, citing text that says outputs are for "internal, and non-commercial purposes." They push others to provide exact links and complain that wrong information was shared.
- Stance: critical
- Attitude: frustrated, insistent
- Evidence:
- "Pro plan Suno, you have no commercial rights to publish what you create?"
- Explanation: Opens the dispute by questioning whether paid plans actually permit commercial use.
- "The problem was , Roy sent that pic in answer to my question about commercial usage and pro plans"
- Explanation: Shows frustration at receiving what they see as misleading evidence.
- "It got out of control with wrong info being posted"
- Explanation: Explicitly frames the exchange as a problem of misinformation.

roymerrick
- Idea: Argues that the user is conflating free-plan and paid-plan terms, and says they provided definitions of "commercial use" from the ToS rather than saying all outputs are noncommercial under paid plans.
- Stance: supportive
- Attitude: defensive, firm
- Evidence:
- "You asked what was 'general commercial terms'. I gave you SUNO's TOS defining 'commercial use.'"
- Explanation: Defends their earlier answer as narrower than claimed by the critic.
- "Wasn't his original question but, I answered that one to. It's in TOS just above the Software section."
- Explanation: Asserts they did address the relevant issue in the ToS.
- "Where are you getting that from...I'll read up."
- Explanation: Shows active disagreement with the interpretation being presented.

.derbaum.
- Idea: Tries to resolve confusion by pointing people to FAQ/ownership documentation and repeatedly clarifies that free users do not have commercial rights while paid users do. Also warns that copyrighted use can create legal trouble and that private use still can violate ToS.
- Stance: supportive
- Attitude: calm, procedural
- Evidence:
- "here https://suno-ai.notion.site/FAQs... 'ownership & copyright'"
- Explanation: Provides a specific source intended to settle the rights question.

- "maybe it was ment for free users. they dont have commercial right."
- Explanation: Distinguishes free-plan restrictions from paid-plan rights.
- "you can do whatever you want to bring you in legal trouble ■ the important part is you got warned."
- Explanation: Warns that copyright-related misuse remains risky even if technically possible.

onyxofborg
- Idea: States clearly that paid users can use their music however they want, but also raises concern that collaborations between paid and free users make ownership messy.
- Stance: supportive
- Attitude: practical, cautious
- Evidence:
- "If you have a paid plan, you can use your music however you wish."
- Explanation: Directly states a pro-commercial-use interpretation for paid plans.
- "I just feel like ownership could be tricky, especially if one of the users is on the free version."
- Explanation: Extends the legal discussion into collaboration/ownership complexity.
- "if you're a paid user but the other person is a free user, they have no right to the eventual song, but you do."
- Explanation: Offers a concrete view on split-rights scenarios.

odd101
- Idea: Warns that distributors often reject AI music and frames monetization/distribution as difficult even if technically allowed.
- Stance: critical
- Attitude: blunt
- Evidence:
- "very few distributors accept ai creations"
- Explanation: Introduces a practical distribution barrier related to AI-generated music.
- "keep that in mind"
- Explanation: Reinforces the warning as relevant to users considering commercial release.

Suno Team Response

furrybeans [Suno Team]
- No direct definitive legal ruling on paid-plan ownership appears in this chunk, but they do engage around related rights/moderation questions and suggest users may not be able to stop others from using AI-generated material.
- Evidence:
- "Maybe. But basically he posted a loop and said he doesn't give anyone the right to use it, so I just wanted him to know that he can't stop someone using it because AI generated etc"
- Explanation: Indicates a Suno team member pushing back on a user's assumption of enforceable control over an AI-generated loop.
- "I still reckon Suno should just tell the user whatever ChatGPT baulks at."
- Explanation: Shows Suno team awareness of moderation/rights confusion but not a full formal rights clarification here.

Additional Evidence (Optional)

"How do you get that from - ' Suno grants you a license to use such Output solely for your lawful, internal, and non-commercial purposes,'?"
Explanation: Shows the exact text that triggered the dispute over plan rights.

Topic: Legality of Covers, Copyrighted Lyrics, and Using Existing Songs in Suno

Description

Another recurring legal/ethical conflict concerns whether users can input copyrighted lyrics, make covers, or privately use protected material. The tension is not neutral discussion: users ask directly if covers are legal, others warn they are not, and moderators stress risk and ToS violations. The argument focuses on whether private use is acceptable, whether cover rights differ by country, and whether mechanical/synchronization licenses are needed.

The discussion is contentious because some users treat “private” or “just for fun” use as acceptable, while others emphasize that it remains against ToS and can still lead to penalties. Participants also react critically to users wanting to recreate existing songs rather than make original work, framing that as laziness or lack of creativity.

Timeline

- **2024-05-16 20:02:08 to 20:09:29**
- **2024-05-17 15:57:57 to 16:04:47**
- **2024-05-17 23:59:52 to 2024-05-18 00:00:13**

How the discussion evolved
- It begins with users complaining that people keep copying copyrighted lyrics and asking whether private use is okay.
- Moderators and users answer that doing so is against ToS and potentially illegal, even if not public.
- The conversation branches into whether covers are allowed at all, with users noting licenses are needed and rules vary.
- Later, another user says they asked ChatGPT to produce gibberish to troll Suno, and someone points out that this too may violate ToS.

Key Participants

drakolyr
- Idea: Criticizes users who copy lyrics from copyrighted works and questions why they do it.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "Oooof, why people keep copying lyrics from copyrighted stuff?"
- Explanation: Clearly frames copyrighted lyric use as a problem.

kenken
- Idea: Suggests private use might be okay and asks directly if keeping it private changes things.
- Stance: neutral
- Attitude: tentative
- Evidence:
- "we can if it stay private tho ?"
- Explanation: Raises the contested position that private use may be exempt.

3daizy
- Idea: Says private use is still the user's risk and explicitly tells users not to post or set such songs public.
- Stance: critical
- Attitude: cautionary
- Evidence:
- "Yup, its your risk.. just not post it here or set it public"
- Explanation: Warns that even if done privately, the risk remains with the user.
- "house rule : dont do that.... that should be the whole discussion ■"
- Explanation: Frames the issue as settled from a moderation standpoint.

great_paimon
- Idea: States that copyrighted lyric use is against Suno's ToS even if kept private, and explains cover licenses.
- Stance: critical
- Attitude: explanatory
- Evidence:
- "Technically no, it is against the service ToS and you can be penalized upon discovery"
- Explanation: Directly answers that private use is still not allowed under the service rules.
- "you typically need a synchronization or mechanical license for a cover"
- Explanation: Adds licensing requirements to the legal explanation.

challengeofthedark
- Idea: Criticizes the impulse to recreate existing songs instead of making original ones using powerful AI tools.
- Stance: critical
- Attitude: dismissive
- Evidence:
- "The power of creation... yet some people still want to do existing stuff. I just....I'll never understand xD"
- Explanation: Frames making covers/reproductions as undesirable and creatively inferior.

zpti
- Idea: Goes further and attributes reuse of existing material to laziness and lack of imagination.
- Stance: critical
- Attitude: contemptuous
- Evidence:
- "Those are the same people who never picked up a pencil in their childhood and claim they can't draw. It's utter laziness"
- Explanation: Explicitly criticizes people who prefer derivative use over original creation.

Suno Team Response

furrybeans [Suno Team]
- No direct formal response on covers/copyrighted lyrics in this segment beyond reacting skeptically during the conversation.
- Evidence:
- "*squints*"
- Explanation: A reaction message indicating attention to the copyright/covers conversation, but not a substantive policy statement.

Additional Evidence (Optional)

"Isn't it legal to make a cover though?"
Explanation: Shows the exact legal confusion that drove the dispute.

Topic: Lyric Moderation / Censorship by ChatGPT-Based Filtering

Description

A major recurring friction point is moderation of lyrics. Users complain that innocuous or contextually acceptable phrases get flagged, that Suno provides poor feedback, and that moderation feels arbitrary or inconsistent. Others defend the system or tell users to “ask ChatGPT,” since users repeatedly state that ChatGPT is what filters Suno lyrics.

This becomes an ethical/content moderation issue because users argue over what should count as offensive, violent, or disallowed. The tension is visible in complaints, sarcasm, and repeated explanations that the moderation system is externalized through ChatGPT. Some users find this opaque and wasteful because failed generations consume time and emotional energy; others mock users for asking for exhaustive banned-word lists.

Timeline

- **2024-05-16 14:33:40 to 16:05:46**
- **2024-05-16 20:04:19 to 20:21:39**
- **2024-05-20 08:02:08 to 08:09:36**
- **2024-05-20 14:16:10 to 14:18:10**

How the discussion evolved
- It starts with a user asking where to find guidelines after repeated flagging. Responses are sarcastic or blunt, saying to ask ChatGPT because Suno’s automod is ChatGPT.
- The conversation broadens into examples of words and lines being blocked inconsistently, with users comparing “worked before” vs “flagged now.”
- Suno team members acknowledge the poor feedback and even say they think Suno should tell users what ChatGPT objected to.
- Later users continue asking how to bypass or interpret moderation, including discussions of “devil,” “blood,” and violent phrasing.

Key Participants

unhappyhistorian
- Idea: Wants clear moderation guidelines and is upset by repeated flagging without explanation.
- Stance: critical
- Attitude: frustrated, sad
- Evidence:
- "i wrote song, but it keep getting flagged and not generating, where can i read the guidelines"
- Explanation: Clearly states the moderation problem and lack of guidance.
- "than why am i being flagged, its so sad"
- Explanation: Expresses emotional frustration over opaque filtering.

.derbaum.
- Idea: Repeatedly says users should ask ChatGPT because it is the moderation source, implying Suno itself cannot easily explain the flag.
- Stance: neutral
- Attitude: practical
- Evidence:
- "ask chat gpt. its the automoderator in suno."
- Explanation: Gives the recurring procedural answer for moderation issues.
- "this is why you ask at the SOURCE of the moderation... CHAT GPT"
- Explanation: Reinforces that the filtering source is external.

wetcircuit
- Idea: Pushes back against demands for explicit lists of disallowed words and mocks users who expect comprehensive moderation guidance.
- Stance: critical
- Attitude: sarcastic, dismissive
- Evidence:
- "if your mother didn't teach you what is inappropriate... how would we list EVERYTHING"
- Explanation: Dismisses the request for explicit moderation standards.
- "I agree, but the ridiculous part is telling us to LIST EVERY WORD HERE."
- Explanation: Shows frustration at the expectation that moderators should enumerate all banned content.

tinnyzaz
- Idea: Calls the moderation arbitrary and frustrating, especially because users waste generations trying to identify the offending phrase.
- Stance: critical
- Attitude: analytical, frustrated
- Evidence:
- "It strikes me as somewhat arbitrary... It feels like a list of banned words to me."
- Explanation: Interprets the moderation system as inconsistent and simplistic.
- "the feedback you get from Suno isn't helpful at all, so you have to waste generations"
- Explanation: Connects moderation opacity to wasted user effort.

great_paimon
- Idea: Explains that censorship comes from ChatGPT/OpenAI interpretation and gives examples of harmless-seeming words being blocked.
- Stance: neutral
- Attitude: explanatory
- Evidence:
- "Lyrics gets censored from ChatGPT... not liking something."
- Explanation: Explicitly attributes the moderation mechanism.
- "people getting censored for using bones, ribcage, and skeletons"
- Explanation: Provides concrete examples of unexpected moderation triggers.

odd101
- Idea: Notes surprising banned words and that moderation is hard to predict.
- Stance: critical
- Attitude: surprised
- Evidence:
- "i didnt expect dead to be banned"
- Explanation: Shows that the filter catches terms users do not expect.

Suno Team Response

furrybeans [Suno Team]
- Acknowledges the opacity of moderation and suggests Suno should tell users what ChatGPT objected to.
- Evidence:
- "I still reckon Suno should just tell the user whatever ChatGPT baulks at."
- Explanation: Directly addresses the core complaint about missing feedback.
- "I don't get spanked by the lyric mod anyway so I'll just happily go about my business."
- Explanation: Casual wording, but confirms the team member sees moderation as a distinct system users struggle with.

Additional Evidence (Optional)

"Interesting that they interpreted that one as explicit. I understand why but that's not the usage of that term in this case."
Explanation: Shows users objecting to contextual misreadings by the filter.

Topic: Fake Suno Mobile Apps / Scam Risk

Description

There is a clear legal and consumer-protection tension around fake mobile apps pretending to be Suno. Users ask whether there is a Suno phone app, and multiple people, including Suno Team, warn that any such app is a scam. The conflict here is between user expectations of an app and the risk of fraud, unauthorized charges, or identity/payment theft.

This becomes contentious when one user reveals they were using such an app and is told it is fake. The reaction is surprise and concern that the fake app was “extremely misleading,” and participants describe these apps as scams stealing money from both users and Suno.

Timeline

- **2024-05-16 15:57:54 to 15:58:48**
- **2024-05-17 01:37:38 to 01:52:34**

How the discussion evolved
- It first appears when someone asks if Suno has a phone app; users and Suno Team answer no, saying current apps are scams.
- Later a user discovers they were using a fake app and that their content is not showing up on the real website, prompting the realization that the app is unaffiliated.
- The chat then turns into explicit condemnation of the fake app’s pricing and design, calling it “a giant scam.”

Key Participants

araslone
- Idea: Asks if there is a phone app and whether it would mean paying a fake service.
- Stance: neutral
- Attitude: cautious
- Evidence:
- "is there a app Suno in phone?"
- Explanation: Starts the scam-risk discussion.

wetcircuit
- Idea: Warns plainly that there is no official app and that iOS/Android apps are scams.
- Stance: critical
- Attitude: direct
- Evidence:
- "Not yet... any apps on ios or android are scams"
- Explanation: Clear anti-scam guidance.

jeezisrice
- Idea: Tells users that using a fake app means giving money to a fake Suno, reinforcing the scam concern.
- Stance: critical
- Attitude: blunt
- Evidence:
- "do you want to give money to a fake Suno?"
- Explanation: Frames the app issue as a payment scam.

sirlucient
- Idea: Realizes the app they used is fake and is shocked by how misleading it was.
- Stance: critical
- Attitude: alarmed
- Evidence:
- "Wow... that was extremely misleading."
- Explanation: Confirms confusion caused by the fake app.
- "Are the devs going to do anything about these people stealing money from them?"
- Explanation: Directly characterizes the fake apps as theft.

graph1ks
- Idea: Calls out the scam pricing and advises users to seek refunds and leave the fake app.
- Stance: critical
- Attitude: outraged
- Evidence:
- "what a giant scam."
- Explanation: Explicit condemnation of the fake app.
- "you should try to get your money back"
- Explanation: Advises remedial action.

Suno Team Response

furrybeans [Suno Team]
- Confirms the apps are fake and jokes about how the AI “defeats humans” through scams.
- Evidence:
- "Fake."
- Explanation: Direct confirmation that the app in question is not official.

- "This is how the AI defeats humans."
- Explanation: Joking phrasing, but still part of the anti-scam warning.

Additional Evidence (Optional)

"2. Subscription price: - Suno AI Pro Weekly:$9.99"
Explanation: Participants cite scam pricing as evidence the fake app is exploitative.

Topic: AI Music and Artist Displacement / Ethical Threat to Human Musicians

Description

There is broader ethical friction around whether AI music threatens artists and other music workers. Some users express concern that AI-generated music could replace “real” musicians or erase creative jobs, while others argue AI is just another tool, compare it to earlier automation, or say artists must adapt. The conflict is present in direct criticism, dismissive replies, and defense of AI.

The discussion is not abstract only: one user shares a linked example about a graphic designer whose templates were allegedly used to train AI, and others respond by blaming capitalism rather than AI itself. Elsewhere users talk about “very few distributors accept AI creations” and “real artists,” showing repeated labor-market and legitimacy tensions.

Timeline

- **2024-05-16 13:30:22 to 13:33:57**
- **2024-05-16 15:01:32 to 15:03:08**
- **2024-05-16 19:18:18 to 19:20:20**
- **2024-05-17 01:23:26 to 01:31:43**
- **2024-05-17 18:32:49 to 18:33:47**
- **2024-05-20 18:02:06 onward** (within this chunk, especially around AI replacing singers and labels)

How the discussion evolved
- Early on, participants defend AI-made work as art and compare AI to instruments.
- Later, users acknowledge “ethical concerns,” while others say AI lets creative people do things they could not before.
- In the evening, users directly discuss “hate for AI,” saying it won’t go away soon.
- Later still, they debate whether AI will replace ordinary singers and how labels may exploit AI to cut labor costs.

Key Participants

beepboop7723
- Idea: Defends AI-assisted creation as real art with a human element.
- Stance: supportive
- Attitude: earnest

- Evidence:
- "I like to think we're all artists, just a different sort."
- Explanation: Frames AI users as artists.
- "There is a human element to it all, and that should matter."
- Explanation: Explicitly defends the creative legitimacy of AI-assisted work.

odd101
- Idea: Frames AI users as “1st generation of Ai Music artist” and sees community development positively.
- Stance: supportive
- Attitude: optimistic
- Evidence:
- "we are all here to grow together as the 1st generation of Ai Music artist"
- Explanation: Strongly embraces AI music as a new artistic field.

tinnyzaz
- Idea: Likes AI because it enables creativity, but openly notes ethical concerns.
- Stance: neutral
- Attitude: thoughtful
- Evidence:
- "I'm enamored of the way AI is allowing creative people to accomplish things they couldn't before. Even if there are ethical concerns."
- Explanation: Balances support with ethical reservation.

tigonn
- Idea: Says AI hate is a scapegoating reaction and implies resistance will eventually fade.
- Stance: supportive
- Attitude: dismissive of anti-AI backlash
- Evidence:
- "the hate for AI won't go away soon... but it will eventually. Just the latest scapegoat"
- Explanation: Minimizes anti-AI criticism as temporary scapegoating.

deafslvt
- Idea: Presents a concrete harm scenario: a designer's work being used to train AI without consent.
- Stance: critical
- Attitude: upset
- Evidence:
- "he got his templates and stuff stolen and trained on AI by the company without his permission"
- Explanation: Raises an explicit ethical complaint about unauthorized training use.

alienanal
- Idea: Pushes blame toward capitalism rather than individuals or AI users.
- Stance: neutral
- Attitude: political, critical of systems
- Evidence:
- "Blame capitalism not the peope"
- Explanation: Reframes the labor-displacement concern as systemic rather than individual.

Suno Team Response

No direct policy response from Suno team in the logs on artist displacement as an ethical issue.

Additional Evidence (Optional)

"very few distributors accept ai creations"
Explanation: Shows downstream market friction tied to AI legitimacy, even if not strictly a moral statement.

Chunk 5: 2024-05-20 to 2024-05-23

Topic: Commercial Use, Ownership, and Copyright Theft of AI-Generated Songs

Description

A recurring point of tension concerns who owns AI-generated songs, what rights free vs paid users have, and how to respond when songs are reuploaded or claimed elsewhere. The contention is clearly legal/ethical: users discuss whether Suno songs can be used commercially, how to secure rights, whether public posting invites theft, and how to handle YouTube Content ID and distributor disputes.

The discussion includes:
- practical advice that paid subscriptions are required for commercial use,
- disagreement over whether publishing on Suno is enough to establish rights,
- frustration over copyright trolls and Content ID claims,
- concern that stolen songs can discourage people from using Suno publicly.

Timeline

- 2024-05-20 00:48:52 - 00:53:15
- 2024-05-20 04:41:19 - 06:09:55
- 2024-05-20 12:55:17 - 13:56:55
- 2024-05-20 15:48:18 - 15:57:36
- 2024-05-20 21:39:51 - 21:57:54
- 2024-05-21 13:01:58 - 14:07:36
- 2024-05-21 19:25:23 - 19:27:52
- 2024-05-22 20:17:58 - 20:20:02

Evolution over time:
- The topic first appears as practical licensing advice around commercial use for a BBQ truck jingle, with users saying paid subscription is needed for monetized usage.
- Later, the issue escalates into copyright theft: a user says an Indonesian account is claiming their songs on YouTube, prompting discussion of contacting distributors and Content ID systems.
- It becomes a more direct ethical/legal conflict when another user describes a “copyright troll” claiming a Suno-generated song and worries about disclosing personal information to dispute it.
- The conversation broadens into criticism of YouTube’s and distributors’ processes, disagreement over whether Suno should help more, and concerns that public posting on Suno makes users vulnerable.
- A related thread later reinforces that once music is distributed or made public, others may steal or reupload it, and users discuss defensive strategies such as uploading first, using distributors, or keeping songs private.

Key Participants

.derbaum.
- Idea: Paid subscription is required for commercial use; Suno is not responsible for stopping theft; users must secure rights externally and should not assume the “public” toggle is the same as formal

publishing protection.
- Stance: critical
- Attitude: firm, corrective
- Evidence:
- "commercial use of songs (like for a bbq truck) would require a paid sub"
- Explanation: Supports the interpretation that .derbaum. is explaining licensing limits and tying commercial use to paid status.
- "the thing is the song must be made during a running paid sub to be usable for monetised applications"
- Explanation: Shows a concrete claim about rights conditions for monetized use.
- "suno has nothing to do with the people stealing your songs... you need to secure the rights before releasing songs into the public."
- Explanation: Directly states their position that Suno is not responsible for downstream theft.
- "the public(ation) feature is just allowing suno to display the songs on the homepage."
- Explanation: Shows their narrower interpretation of what “public” on Suno means.

alikan
- Idea: Copyright trolls and platform processes are difficult, but users should pressure YouTube and distributors, preserve evidence, and understand Suno cannot fully police the ecosystem.
- Stance: critical
- Attitude: pragmatic, forceful
- Evidence:
- "Suno cant control it / afford too"
- Explanation: Shows their view that Suno is limited in what it can do about theft.
- "email youtube and demand protection of personal data / identity"
- Explanation: Indicates a practical response path focused on platform pressure.
- "they just hope you give up ■"
- Explanation: Frames the copyright claimants as persistent opportunists exploiting process friction.
- "you own the creative copyright of your music (enforcing it is another matter)"
- Explanation: Captures both their legal position and the practical enforcement difficulty.

endien
- Idea: A copyright troll claimed their Suno-generated song on YouTube; disputing it may require revealing personal information, which feels unsafe and too burdensome for a “silly AI song”; Suno should at least warn users or provide guidance.
- Stance: critical
- Attitude: frustrated, worried
- Evidence:
- "Some copyright troll is trying to claim copyright and Youtube content ID on C-A-P-Y-B-A-R-A"
- Explanation: Establishes the core complaint and legal conflict.
- "i don't want to step into a hornet's nest of copyright trolls"

- Explanation: Shows apprehension about escalation and legal risk.
- "apparently can't do that without disclosing my legal name and _address_ to the copyright troll's account as well."
- Explanation: Supports the claim that privacy concerns are central to the tension.
- "it really doesn't benefit them very much. But I'm honestly happy if others continue to enjoy it"
- Explanation: Shows how the issue affects willingness to use Suno publicly and suggests criticism of Suno's lack of guidance.
- "At least some instruction on the publish button with 'hey, you might want to publish this on Youtube first'"
- Explanation: A direct request for platform-level guidance.

steicamel
- Idea: Their songs were ripped from their Suno profile, uploaded elsewhere under different titles, and used in copyright claims; they are trying to fight back via Content ID/distributors.
- Stance: critical
- Attitude: frustrated, matter-of-fact
- Evidence:
- "trying to get the content ID on them before this indonisian person"
- Explanation: Shows active concern over rights and platform race conditions.
- "Yeah they uploaded every song I made to every platform under different titles"
- Explanation: Strong evidence of the theft complaint.
- "And trying to claim copywrite rights on youtube"
- Explanation: Shows the legal/platform dimension of the issue.
- "I think around 4:30-5:00 in this is my favorite thing"
- Explanation: Not relevant to the conflict; excluded from interpretation.

drakolyr
- Idea: Platform/distributor disputes can sometimes be resolved by contacting distributors directly; YouTube often asks for more proof; they also have experience with stolen songs and difficult support.
- Stance: critical
- Attitude: practical, resigned
- Evidence:
- "They will always send this. If you can contact the label/other Platforms do it"
- Explanation: Shows advice grounded in prior experience with platform dispute procedures.
- "Worked for my Cat Song"
- Explanation: Indicates personal experience with handling such claims.
- "Most distributors delete the song if they cant prove ownership."
- Explanation: Supports their suggested strategy of contacting distributors/platforms.

great_paimon
- Idea: Use legal/organizational safeguards like a PO box or LLC if needed, gather evidence of creation stages, and pursue distributors/takedowns carefully.
- Stance: critical
- Attitude: serious, advisory
- Evidence:
- "PO Box will help protect your actual address and the LLC will protect your personal asset"
- Explanation: Shows concern with legal/privacy safeguards.
- "Then you contact the troll's distributor."
- Explanation: Supports their practical dispute-resolution approach.
- "Do not forget to do the appeal/removal."
- Explanation: Reinforces an active response strategy.

wappie6733

- Idea: The main concern is whether the user is bothered by false ownership or lost money; they frame the problem as more worth acting on if real money is involved.
- Stance: neutral
- Attitude: calm, practical
- Evidence:
- "are you worried that someone uses your song to make money, which should belong to you? Or just pissed that someone claims it theirs?"
- Explanation: Shows they are clarifying the nature of the grievance rather than taking a strong side.
- "I would probably be very annoyed, but wouldn't bother doing anything unless there is some real money on the table"
- Explanation: Indicates a measured, utilitarian stance.

Suno Team Response

furrybeans [Suno Team]
- No direct response to the copyright-troll or ownership disputes in this chunk.
- Evidence:
- No response from Suno team in the logs

Additional Evidence (Optional)

".derbaum. : i would recommend asking your dad for the 10 bucks to make the song for him... because commercial use of songs (like for a bbq truck) would require a paid sub..."
Explanation: Early evidence that rights/commercial use restrictions are already a source of practical friction.

"steicamel : Yeah they uploaded every song I made to every platform under different titles"
Explanation: Strong direct example of unauthorized reuploading driving the later conflict.

"endien : But it's really disheartening and kind of makes me not want to touch Suno anymore."
Explanation: Shows the downstream effect of the dispute on willingness to use the product publicly.

Topic: Multiple Accounts to Circumvent Free-Tier Limits

Description

There is clear tension around whether users should create multiple accounts to get more free credits. This is an ethical and terms-of-service issue rather than a neutral feature discussion. The friction comes from one user admitting to using multiple accounts and others, including Suno staff, responding that doing so breaks the rules and harms the free tier for everyone.

Timeline

- **2024-05-20 15:42:15 - 15:57:36**

Evolution over time:
- The topic begins when users discuss whether they use one or more accounts.

- A Suno team member clarifies that some paid users have multiple accounts, but free users doing so are breaking the terms.
- One user admits to using multiple accounts “to test out different genres.”
- The conversation escalates into joking about bans and jail, but the core tension remains: free-tier multi-accounting is treated as abuse and a threat to the free plan.
- Suno staff then explicitly states that enough abuse could lead to the removal of the free tier.

Key Participants

deafslvt
- Idea: Admits to using multiple accounts, initially saying they use them for testing genres, then acknowledges they should go back to using one.
- Stance: supportive of the practice initially, then backing down
- Attitude: casual, joking, slightly sheepish
- Evidence:
- "i'm using multiple accs but none carry on so i just use them to test out different genres"
- Explanation: Direct admission of using multiple accounts and rationale.
- "it has been a fun ride guys"
- Explanation: Shows joking resignation after being called out.
- "ill use only 1 acc then ig"
- Explanation: Indicates retreat after pushback from staff/community.

furrybeans [Suno Team]
- Idea: Multiple paid accounts can exist, but multiple free accounts break ToS; if too many people do it, Suno may remove the free tier.
- Stance: critical
- Attitude: playful but firm
- Evidence:
- "Some free users break the terms of service."
- Explanation: Direct statement that free-tier multi-accounting is against the rules.
- "Go directly to jail"
- Explanation: Joking tone, but clearly reinforcing disapproval.
- "They might get rid of the free tier completely if too many people make multiple accounts. Then everyone loses."
- Explanation: This is the strongest expression of the team’s concern and policy rationale.

.derbaum.
- Idea: Multiple accounts are against ToS and can lead to deletion, though they distinguish that paid multiple accounts are likely allowed.
- Stance: critical
- Attitude: corrective, cautionary
- Evidence:
- "multiple accounts are against the tos and can lead to deletion of all of them."
- Explanation: Explicit warning about consequences.
- "multiple paid ones are not against the tos... just multiple free ones"
- Explanation: Shows nuanced interpretation of the rule.

sushileafbeats
- Idea: Evading payment by making multiple free accounts is unfair.
- Stance: critical
- Attitude: disapproving
- Evidence:

- "skirting around paying for the service is ehhhhhhhhhhhhhhhhh"
- Explanation: Clear ethical criticism of the practice.

jeezisrice
- Idea: Multiple accounts may be normal for other services, but not appropriate for Suno.
- Stance: critical
- Attitude: joking, disapproving
- Evidence:
- "Multiple accounts is what we do to google when they try to say our drive is getting full - not to suno"
- Explanation: Frames the behavior as acceptable elsewhere but not here.

Suno Team Response

furrybeans [Suno Team]
- Free-tier multi-accounting breaks ToS and may endanger the free plan for everyone.
- Evidence:
- "Some free users break the terms of service."
- "They might get rid of the free tier completely if too many people make multiple accounts. Then everyone loses."

Additional Evidence (Optional)

"deafslvt : rip my 30 emails"
Explanation: Even though it is immediately softened as a joke, it reinforces the theme of account proliferation.

Topic: AI-Generated Lyrics vs Writing Your Own

Description

This is a recurring ethical/artistic friction point: some users criticize AI-generated lyrics as lower quality or less authentic, while others openly use ChatGPT/Gemini for lyric writing because it is faster or helps them create. The tension is not about a feature bug; it is about artistic value and legitimacy in AI music creation.

Timeline

- **2024-05-20 19:32:42 - 19:45:49**
- **2024-05-20 19:59:58 - 20:00:13**
- **2024-05-20 23:20:16 - 23:21:03**

Evolution over time:
- The discussion starts with one user saying they do not condone AI lyric generation but are fine with using AI for style suggestions.
- Other users then debate whether AI lyrics are acceptable, whether they sound generic, and whether human-written lyrics are better.

- Some argue AI is useful as a starting point if heavily guided or edited; others say writing your own lyrics is better and more meaningful.
- The conversation never fully resolves, but a rough consensus forms that AI-generated lyrics can work, especially with editing, yet often default to generic patterns.

Key Participants

privateriem
- Idea: Using AI to generate lyrics is not ideal; using AI for style suggestions is fine.
- Stance: critical
- Attitude: blunt
- Evidence:
- "While I don't condone using AI to generate lyrics, using chatgpt for prompt styles suggestions is A-ok to me"
- Explanation: Directly states their ethical/artistic distinction.

odd101
- Idea: Many users rely on AI-generated lyrics; quality depends on how much effort/specification goes into prompting, but 100% AI lyrics are often weak.
- Stance: critical
- Attitude: dismissive, evaluative
- Evidence:
- "Lyrics are bad"
- Explanation: Direct criticism of an example with AI lyrics.
- "Most of yall"
- Explanation: Broad claim that many users use GPT for lyrics.
- "Ppl wanna put 30mins into a banger Yeah ok"
- Explanation: Dismissive toward low-effort workflows.
- "I know it’s possible to create good stuff"
- Explanation: Shows the criticism is not absolute; AI lyrics can work with care.

mrobese
- Idea: Uses ChatGPT for lyrics because it is fast and practical; acknowledges the results can be generic.
- Stance: supportive
- Attitude: casual, defensive
- Evidence:
- "Thats chatgpts fault xD"
- Explanation: Admits AI lyric weaknesses while distancing themselves from responsibility.
- "Man 1 upload a day requires to much work if i make the lyrics mysefl"
- Explanation: Practical defense of using AI lyrics.
- "I just ask chatgpt, Make lyrics in this style, this is the title."
- Explanation: Clear description of their supportive workflow.

drakolyr
- Idea: AI lyrics improve when you give the model richer context/story rather than a couple of words.
- Stance: supportive
- Attitude: explanatory
- Evidence:
- "give 2 words of course you got bad lyrics. Write a whole Story and say it should made it into a lyrics, Quality way better"
- Explanation: Shows support for AI lyric use when used more carefully.

tigonn
- Idea: Human lyrics are generally better for depth, but AI lyrics are acceptable for songs that only need to “sound good”; editing AI lyrics helps.
- Stance: neutral
- Attitude: balanced, reflective
- Evidence:
- "if the song just has to 'sound good' and nothing else, AI lyrics are fine"
- Explanation: Gives limited approval for AI lyrics.
- "if you want a song to be deeper than surface level ear candy, human lyrics are always better."
- Explanation: Stronger support for human-authored lyrical depth.
- "I almost always edit even if I do AI gen them."
- Explanation: Shows a hybrid workflow.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"privateriem : I discovered I could write songs because of this thing"
Explanation: Even a critic of AI-generated lyrics credits the tool with enabling their own writing, showing the tension is not simple rejection.

"boomerstickk : using suno to make song written in conlangs is pretty fun"
Explanation: Shows some users use AI as an expressive tool around self-created linguistic material rather than replacing writing entirely.

Chunk 6: 2024-05-23 to 2024-05-28

Topic: AI Music Ownership, Copyright Strikes, and Distribution Risks

Description

A clear ethical/legal tension appears around ownership of AI-generated songs, commercial rights, and third-party distribution platforms. The discussion centers on two related conflicts:

1. **Whether users can legally/commercially use songs made on Suno**, especially on free vs paid plans.
2. **Whether songs are being stolen or falsely claimed by others on streaming platforms**, causing takedowns or copyright conflicts.

This is contentious because users complain about losing control over songs they made and about others exploiting those songs. One user describes repeated theft and calls the system “a joke,” while others discuss workarounds like DistroLock and private uploads.

The topic evolves from basic rights questions to explicit complaints about song theft and copyright strikes, then to practical discussion of distribution and protection strategies. It later broadens into criticism of distributors and concerns that people will dismiss complaints because the music itself is AI-generated.

Timeline

- 2024-05-24 00:00:00 - 00:00:30
- 2024-05-24 13:13:54 - 13:18:16
- 2024-05-24 14:39:50 - 15:02:02
- 2024-05-25 03:37:39 - 03:44:54
- 2024-05-25 15:07:49 - 15:17:24

Evolution over time
- The issue begins with a straightforward rights question: whether paid users “get the rights to the songs.”
- Later, users cite Suno’s terms to distinguish free-tier and paid-tier ownership.
- The discussion intensifies when a user reports that others uploaded their songs to streaming services and got the originals struck.
- Other users suggest practical defenses like DistroLock, private uploads, or distributor tools, while the affected user criticizes the system and DistroKid’s handling.
- The conversation ends with broader frustration that complaints about stolen AI music may be dismissed because “AI music steals the work of musicians.”

Key Participants

.derbaum.
- Idea: Explains the distinction between free and paid rights, stating paid users get rights while free users do not.
- Stance: neutral
- Attitude: matter-of-fact
- Evidence:
- "free and paid work the same. paid just has more credits and you get the rights to the songs"
- Explanation: This directly states the rights distinction being discussed.

degenlawyeroliver
- Idea: Gives a detailed quotation from Suno’s terms explaining paid-tier ownership and free-tier limits.
- Stance: neutral
- Attitude: precise
- Evidence:
- "Free account: no rights. Pro: full commercial rights."
- Explanation: This directly answers the legal ownership issue.
- `"if you are a user who has subscribed to the paid tier... Suno hereby assigns to you all of its right, title and interest..."`
- Explanation: This is the strongest textual evidence in the logs for the rights framework.

pixel_ai
- Idea: Asks whether users own rights to tracks they produce and whether they can use them in projects.
- Stance: neutral
- Attitude: curious, enthusiastic
- Evidence:

- "do we own the rights to the tracks we produce on Suno?"
- Explanation: This introduces the ownership/legal question directly.
- "I would like to use one of my tracks on this project I am working on."
- Explanation: Shows the practical commercial/legal concern.

imolivercom
- Idea: Complains that others have claimed and redistributed his songs, causing strikes and removals; argues the system is broken.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "getting real tired of having to report all these people stealing my song"
- Explanation: Direct complaint about repeated theft.
- "they have then reuploaded my songs as their own."
- Explanation: Explicit allegation of misappropriation.
- "the whole system is a joke"
- Explanation: Clear criticism and frustration with the copyright/distribution system.
- "if i complain my songs are being stolen, people will just say well AI music steals the work of musicians"
- Explanation: Connects the conflict to a broader ethical argument raised in the chat.

wetcircuit
- Idea: Explains DistroLock as a preventive tool, but notes its limitations and the hassle involved.
- Stance: neutral
- Attitude: explanatory
- Evidence:
- "Distrolock is free."
- Explanation: Introduces a proposed protection method.
- "it doesn't remove existing uploads..., but it is suppose to help stop uploads after you have locked the song"
- Explanation: Clarifies that it is preventive, not curative.
- "you have to unlock it for those uploads..., which I read on their forums is a bit of a hassle"
- Explanation: Shows friction and limitations of the solution.

aschubert
- Idea: Explains YouTube Content ID via distributors as a protection route that can redirect money from stolen uploads.
- Stance: neutral
- Attitude: practical
- Evidence:
- "You have to pay $15 on Distrokid to get Youtube content ID per album release."
- Explanation: Adds a concrete distribution/copyright enforcement detail.
- "THAT will take care of youtube stealers. It detects your song and then gives you the money."
- Explanation: Describes a specific remedy to theft on YouTube.

sushileafbeats
- Idea: Criticizes the vague distributor response and notes that some platforms appear hostile to AI music.
- Stance: critical
- Attitude: skeptical
- Evidence:
- "The vagueness is really gross tbh."
- Explanation: Direct criticism of how the issue is being handled.

- "some stores have a stance against AI music... but moreso 'low effort' music."
- Explanation: Points to a content-policy tension around AI music distribution.

Suno Team Response

furrybeans [Suno Team]
- Clarifies that paid-tier users can do what they want with songs created during an active subscription, and that copyright itself is separate from Suno.
- Evidence:
- "Licensing is covered in Terms of Service (if you have paid subscription you can do what you want with your generated songs.)"
- Explanation: Direct team clarification on licensing rights.
- "Copyright is a separate thing which Suno isn't involved in."
- Explanation: Distinguishes Suno's licensing from external copyright enforcement.
- "I should clarify: You can do what you want with songs made *during* an active paid subscription."
- Explanation: Narrows and confirms the scope of user rights.

Additional Evidence (Optional)

"Someone has copyright claimed my songs and gotten them removed from streaming platforms"
Explanation: This is the clearest example of the legal/distribution conflict becoming an actual harm to a user.

Topic: Circumventing Payment / Multiple Accounts for Credits

Description

A legal/ethical tension appears around account usage rules and attempts to get more free credits. Users explicitly discuss creating new email accounts, multiple free accounts, and whether this violates terms. Other users push back and say this is not allowed, distinguishing between multiple paid accounts and multiple free ones.

This qualifies as contention because it involves rule-sensitive behavior tied to platform abuse and fairness. The discussion is brief but explicit: one user says they can "just create a new email," and others immediately frame that as skirting payment and violating rules.

Timeline

- **2024-05-24 05:18:17 - 05:21:36**

Evolution over time
- The issue starts with people discussing burning through credits and wanting more.
- A user says they can "just create a new email."
- Another user asks directly whether multiple accounts violate the terms.
- Multiple users answer that multiple paid accounts are okay, but multiple free accounts are not.

Key Participants

Deleted User
- Idea: Suggests creating a new email to continue making songs once credits run out.
- Stance: supportive
- Attitude: casual
- Evidence:
- "Just waiting to make some more songs (I can just create a new email)"
- Explanation: This directly proposes a workaround to obtain more access/credits.

taboovector
- Idea: Asks whether having several accounts with a premier plan is against the ToS.
- Stance: neutral
- Attitude: uncertain
- Evidence:
- "i do wonder is it against the tos to own several accounts with a premier plan"
- Explanation: This directly raises the rule/legal question.

kakermix
- Idea: States that multiple paid accounts are allowed, but multiple free accounts are not.
- Stance: neutral
- Attitude: definitive
- Evidence:
- "It is not. Multiple paid accounts is ok"
- Explanation: Clarifies one side of the rule.
- "Mutliple free accounts are not"
- Explanation: Explicitly identifies the prohibited behavior.

sushileafbeats
- Idea: Frames using multiple free accounts as “skirting payment” and not acceptable.
- Stance: critical
- Attitude: disapproving
- Evidence:
- "if ur payin do it up. but skirting payment to get tons of free credits is no no"
- Explanation: Explicit criticism of trying to bypass payment through free accounts.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"my bad kinda thought it would be like that ■"
Explanation: Shows the user backing off after being told the rule.

Topic: Unauthorized Use of Existing Lyrics / Covers and Rules Against It

Description

A recurring legal/moral issue appears around using copyrighted lyrics or making songs too close to existing works. This is not a long argument, but it is a repeated source of friction because users ask about doing it, attempt it, or are warned not to.

The clearest conflict comes when a user pastes lyrics “ministry of sound hint” and a Suno team member reminds them that users are “not meant to create covers / use copyrighted lyrics.” Another user also asks where to direct copyright questions because they need “definitive answers.”

Timeline

- 2024-05-24 13:13:54 - 13:18:16
- 2024-05-25 15:39:37 - 15:44:54
- 2024-05-27 03:24:43 - 03:26:01

Evolution over time
- The issue appears first in rights questions generally.
- It becomes more specific when users discuss copyright questions and ask where to get authoritative answers.
- It surfaces again when a user experiments with recognizable lyrics and Suno team explicitly warns against using copyrighted lyrics.

Key Participants

steveericjordan
- Idea: Wants definitive copyright answers, not guesses from the community.
- Stance: critical
- Attitude: serious
- Evidence:
- "for copyright is you need definitive answers, not educated guesses from a community"
- Explanation: Shows concern about the legal risk and the insufficiency of informal advice.

johnstathams
- Idea: Uses recognizable lyrics as a “hint” and later says it was only experimentation and not for release.
- Stance: neutral
- Attitude: casual
- Evidence:
- "yeah ■"
- Explanation: Acknowledges the copyrighted-lyrics issue after team warning.
- "doesnt matter im not releasing it anyways"
- Explanation: Suggests they see experimentation as distinct from publishing.

furrybeans [Suno Team] (included here because the warning is central)
- Idea: States users are not meant to create covers or use copyrighted lyrics with Suno.
- Stance: critical
- Attitude: corrective
- Evidence:
- "There's a thing that pops up the first time you use custom lyrics. Basically you're not meant to create covers / use copyrighted lyrics with Suno."
- Explanation: This is the clearest direct team statement on this issue.

Suno Team Response

furrybeans [Suno Team]
- Warns against creating covers or using copyrighted lyrics with Suno.
- Evidence:
- "you're not meant to create covers / use copyrighted lyrics with Suno."
- Explanation: Direct statement of platform position.

Additional Evidence (Optional)

"try emailing their support line your questions. You can use that answer in court."
Explanation: Shows users recognize the seriousness of getting reliable copyright guidance.

Topic: Ethical Tension Around AI Replacing / Undercutting Human Musicians

Description

A recurring moral tension appears around whether AI music should replace or outcompete musicians and whether that is desirable. This is not a direct fight between two sharply opposed camps, but there is clear friction in the values expressed.

Some users enthusiastically favor AI over musicians or DJs, while others frame AI as just a tool or worry about corporate use. One user says, "I would be even happier if we could replace people with AI," while another says they prefer Suno to remain a “toy” rather than a corporate “tool.” Another user explicitly says they are “happy to replace musicians and DJs with ai.”

Timeline

- 2024-05-23 23:16:39 - 23:19:22
- 2024-05-24 00:20:27 - 00:24:15
- 2024-05-24 12:44:47 - 12:49:09
- 2024-05-24 14:43:13 - 14:49:14

Evolution over time
- It starts indirectly with concerns about overfitting and generated music resembling known material.
- It becomes more concrete when users discuss whether Suno is “useful” as a product without stems.
- The moral question sharpens when some users openly state they are happy to replace musicians or even people with AI.
- Others resist this framing by saying they want AI to remain less corporate, or by emphasizing AI as a tool rather than a total replacement.

Key Participants

slicklootz

- Idea: Reports a professional opinion that Suno won’t be very useful until it has stem downloads.
- Stance: critical
- Attitude: calm
- Evidence:
- "it's not going to be as useful of an ai product until they can introduce stem downloads"
- Explanation: This frames AI music as a professional production tool and critiques its current limits.

kakermix
- Idea: Disagrees that Suno needs stems to count as a product and says music creation has become much easier through AI.
- Stance: supportive
- Attitude: confident
- Evidence:
- "I would argue that Suno has passed the line already Into 'product'"
- Explanation: Pushes back on the more restrictive view of AI’s usefulness.
- "music creation has fallen through the floor in the sense of how easy it is."
- Explanation: Frames AI as transformative in production access.

shiroken
- Idea: Raises a business-risk concern that stem downloads could let people leave Suno once they extract enough material.
- Stance: critical
- Attitude: speculative but direct
- Evidence:
- "Wouldn't the risk be people just gen thousands of stems in a month, pull them, and never use suno again?"
- Explanation: Shows concern about AI use being extractive and not sustainable for the platform.

wetcircuit
- Idea: Openly says they are happy replacing musicians and DJs with AI.
- Stance: supportive
- Attitude: blunt
- Evidence:
- "honestly, I am happy to replace musicians and DJs with ai."
- Explanation: This is the clearest direct expression of replacement ethics in the logs.

crazyblobb
- Idea: Goes even further, saying they’d be happier replacing people with AI.
- Stance: supportive
- Attitude: dark, provocative
- Evidence:
- "I'd be even happier if we could replace people with AI."
- Explanation: Escalates the replacement argument from creative work to people generally.

neetaku86
- Idea: Prefers AI to remain more of a “toy” than a corporate tool so record companies don’t take it over.
- Stance: critical
- Attitude: wary
- Evidence:
- "I prefer it stay a toy and not a tool."
- Explanation: Explicitly opposes greater corporate/professional adoption.
- "A tool makes it able to be used by actual record companies"
- Explanation: Ties the concern directly to industry power.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"someones been listening to @! Feline Music"
Explanation: Not directly about replacement, but reflects the community's active circulation of AI-made songs as cultural objects in their own right.

Topic: AI Voice Cloning / Voice Similarity and Its Legal Risks

Description

A smaller but distinct legal/ethical thread appears around reproducing recognizable voices and the risks of doing so. Users discuss wanting "saved voices," using external tools to swap vocals, and explicitly warn about legal issues when using other people's voices.

This is contentious because it involves identity/likeness concerns rather than just music generation. The logs support a narrow claim: users are aware there are legal concerns with using specific real people's voices.

Timeline

- **2024-05-24 00:43:27 - 00:46:13**
- **2024-05-24 13:38:54 - 13:39:37**

Evolution over time
- Users first notice Suno accidentally approximating known voices.
- Later, users discuss external voice tools and one explicitly warns about "legal issues if you use the voices of other people."
- The discussion remains cautionary rather than becoming an argument.

Key Participants

sir.fancy.pants
- Idea: Wants singer/gender shifts to work consistently because it would be "bad-ass."
- Stance: supportive
- Attitude: enthusiastic
- Evidence:
- "I would love if the gender shift (or just singer shift in general) would work consistently."
- Explanation: Shows interest in controllable voice changes.

thejackill
- Idea: Wants to refine vocals and later mentions not wanting to put a famous voice on a wrestling song.

- Stance: neutral
- Attitude: cautious
- Evidence:
- "maybe I won't stick Gojira on it...or maybe I will"
- Explanation: Indicates awareness of using a recognizable voice as a possibility.

graph1ks
- Idea: Warns that using voice models of other people carries legal issues.
- Stance: critical
- Attitude: cautionary
- Evidence:
- "just keep in mind there are legal issues if you use the voices of other people."
- Explanation: This is the clearest legal caution in the logs.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"it would be so crazy to get to mess around with post vocals"
Explanation: Shows interest in reproducing a recognizable artist's voice, which is the exact kind of use another user flags as legally risky.

Chunk 7: 2024-05-28 to 2024-05-30

Topic: AI Music Distribution Platforms Rejecting AI-Generated Content

Description

A clear legal/platform-policy tension appears around whether AI-generated music can be distributed through third-party services. The contention is directly raised when a user reports that a distributor is "refusing to publish AI generated content," which frames the issue as a restriction on AI music publishing. Later discussion also touches on monetization and distribution logistics for AI-made songs, showing continued concern about what platforms will accept.

This is relevant to legal/ethical/platform-governance issues because the friction is explicitly about whether AI-generated songs can be published through external services. The discussion does not develop into an argument between many users in this chunk, but it does include a direct complaint and related distribution talk.

Timeline

- **2024-05-28 07:39:37 - 07:39:53 UTC**
- **2024-05-28 10:14:17 - 10:24:19 UTC**

- **2024-05-29 09:27:45 - 09:31:18 UTC**
- **2024-05-30 13:20:57 - 13:26:38 UTC**

Evolution:
- The issue first appears as a direct complaint: a user says a distributor rejected releases because they were AI-generated.
- Later, other users discuss using distribution services like DistroKid and attribution requirements, which broadens the topic from one rejection to general publishing mechanics.
- On 2024-05-29, users continue discussing ownership and whether paid/free Suno usage affects distribution rights.
- On 2024-05-30, another user raises concern about protecting uploaded AI songs from scammers/claims, showing that publishing AI music remains a recurring friction point.

Key Participants

poverty7154
- Idea: Their distributor refused to publish AI-generated music, so they are seeking alternatives.
- Stance: critical
- Attitude: frustrated, practical
- Evidence:
- "Anyone have any alternatives to IMusician to get songs published? Just had my releases knocked back as they're refusing to publish AI generated content now."
- Explanation: This is a direct complaint about a platform refusing AI-generated releases.

damienb
- Idea: Interested in distribution logistics for AI-made songs, including Spotify and distributor behavior.
- Stance: neutral
- Attitude: inquisitive
- Evidence:
- "What did you use to get it on spotify"
- "Can the 'artist' be the persona, with you as the owner secretly?"
- "What if everything is 100% ai. Music/melody by suno, lyrics by ChatGPT?"
- Explanation: These questions influence the discussion toward legal/attribution implications of distributing AI songs.

graph1ks
- Idea: Distributors require attribution and real names for upload metadata; anonymity would require lying.
- Stance: neutral
- Attitude: matter-of-fact
- Evidence:
- "uploading songs requires you to specify who wrote the lyrics or melody for attribution. these have to be real names."
- "there is no way of 100% anon unless you **lie**"
- Explanation: This frames distribution as constrained by platform attribution requirements.

_szczerbatek
- Idea: Wants to know whether Suno-generated songs can be uploaded to a private YouTube channel.
- Stance: neutral
- Attitude: cautious
- Evidence:

- "Hello, I would like to ask if the songs I create in the Suno.com application can be uploaded to my private YouTube channel."
- Explanation: This extends the publication issue into YouTube usage and permissions.

tatzdag_30488
- Idea: Is confused by terms of use about selling/streaming AI songs and wants clarity on whether Spotify counts.
- Stance: cautious
- Attitude: uncertain
- Evidence:
- "I see rite in the user agreement you can't sell any of this without permisions...anyone want to clear that up for me? Does spotify count?"
- Explanation: This directly raises uncertainty about commercial rights and platform use.

graph1ks
- Idea: A distributor can refuse songs they do not want to release; if unhappy, use another distributor.
- Stance: neutral
- Attitude: pragmatic
- Evidence:
- "your distributor has the right to deny any song they don't feel comfortable releasing. if you're unhappy with your distributor you have to move to a different one."
- Explanation: This responds to the platform rejection issue with a practical interpretation.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"if you’re a paid user yes, free users don't own their songs."
Explanation: This shows users tying publishing/distribution rights to Suno subscription status, which is part of the broader friction around legal use of AI-generated songs.

Topic: Morality of Using AI Music Generation

Description

A direct moral tension appears when a user says they feel “mixed on the ‘morality’ of this thing,” referring to Suno. The discussion that follows reveals disagreement in tone and framing: one user responds bluntly, another tries to reframe AI music as a tool for personal enjoyment rather than popularity or branding. The contention centers on whether using AI music generation feels ethically comfortable, and whether emotional discomfort around public backlash or branding is part of that moral unease.

This topic qualifies because it is explicitly framed as a moral issue and includes disagreement and interpersonal friction.

Timeline

- **2024-05-28 07:54:51 - 08:04:38 UTC**
- **2024-05-28 08:28:09 - 08:29:40 UTC** (aftermath / reflection)

Evolution:
- The conversation starts with a subscription/cancellation question.
- It turns into an explicit moral concern when one user says they feel mixed about the morality of AI music.
- Another user responds bluntly: "lol then stop using it?"
- A different user offers a more supportive framing, describing Suno as a tool that opens doors and arguing music should be made for enjoyment, not popularity.
- The user expressing moral discomfort later says the conversation is “ruining my mood,” and eventually steps away.
- Later they return, say they erased Suno-related profile content “to try psychologically making myself happier,” and apologize for being moody, showing lingering emotional tension rather than resolution.

Key Participants

krab_.legs
- Idea: Feels morally conflicted about using Suno; also dislikes the pressure of branding and finds hearing people get worked up about AI music emotionally draining.
- Stance: critical
- Attitude: conflicted, moody, emotionally drained
- Evidence:
- "I feel mixed on the ‘morality’ of this thing."
- "It’s like a tool to play around with."
- "I just feel like trying to brand one’s self sucks fun outta it"
- "I guess hearing people get worked up about it other than myself can be emotionally draining"
- "Sorta erased any suno stuff from my profile to try psychologically making myself happier"
- Explanation: These lines directly show moral uncertainty and emotional strain tied to AI music use and self-presentation.

wetcircuit
- Idea: Responds dismissively to the morality concern, suggesting the user should stop using Suno if they feel that way.
- Stance: critical
- Attitude: blunt, dismissive
- Evidence:
- "lol then stop using it?"
- "nobody worked up here. ... except you a little."
- Explanation: The wording is terse and pushes back on the moral concern rather than engaging it.

beepboop7723
- Idea: Frames Suno as a tool that produces meaningful art people can keep and enjoy, and argues music should be made for enjoyment rather than popularity.
- Stance: supportive
- Attitude: calm, reassuring
- Evidence:
- "Even if it's a tool. It produces content you can keep and enjoy."
- "Suno had opened so many doors for me."
- "I don't make my music to become popular and I think that shouldn't be the goal of music creators"
- "Maybe it's worth taking a break and coming back in a few days?"

- Explanation: These remarks try to lower the emotional temperature and justify AI music use in personal/creative rather than status terms.

recluse420
- Idea: Suggests a practical alternative: if the user plans to stop within a year, they should not buy a yearly plan.
- Stance: neutral
- Attitude: practical
- Evidence:
- "then dont get a year"
- "you can pay for monthly"
- Explanation: This steers the conversation away from morality and toward practical subscription choices.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"Totally. Ya'll be more like Chibii lol"
Explanation: This suggests the user preferred the more supportive tone from another participant, reinforcing that the exchange involved emotional friction.

Topic: AI-Generated Content Rejected or Filtered by Moderation Systems

Description

There is recurring friction around moderation/filtering of AI music content: users describe songs being blocked, flagged, filtered from visibility, or rejected for terms and themes they believe should be acceptable. This includes moderation of lyrics/prompts, trending/new-section visibility, and concerns over hidden filtering criteria. The tension is both practical and ethical/platform-governance-related because users question what is allowed, whether filters are too broad, and how AI-generated content is being restricted.

This topic involves repeated complaints, confusion, and disagreement over content governance rules.

Timeline

- 2024-05-28 11:08:16 - 11:10:02 UTC
- 2024-05-28 11:19:40 - 11:21:36 UTC
- 2024-05-28 11:49:01 - 11:55:37 UTC
- 2024-05-29 21:35:31 - 21:40:37 UTC
- 2024-05-30 20:43:32 - 20:59:16 UTC
- 2024-05-30 22:00:44 - 22:08:07 UTC

Evolution:
- Early discussion speculates that certain style terms might trigger moderation and affect trending.
- Users then discuss how some odd or “juvenile” tags may stop songs from trending.
- Later, users explicitly talk about lyric moderation, what counts as original, and being timed out for not using original lyrics.
- On 2024-05-29, users discuss censorship becoming looser and praise Suno for adjusting filters.
- On 2024-05-30, users discuss whether explicit songs can be generated, what is allowed, and how moderation responds.
- The topic broadens into moderation of off-platform publishing and anti-spam enforcement, but the core remains confusion and frustration over filtering decisions.

Key Participants

player_of_the_games
- Idea: Suggests some words might trigger AI moderation even if they should not.
- Stance: critical
- Attitude: cautious
- Evidence:
- "i wonder if having styles like 'anti' might flag the AI moderation"
- "of course they shouldnt flag it... but its a possibility!!!"
- Explanation: This directly identifies moderation as potentially overbroad.

alikan
- Idea: Thinks negative terms or nonsensical style tags may get caught by filters; also suspects some tags trigger a juvenile filter.
- Stance: critical
- Attitude: speculative, analytical
- Evidence:
- "My theory is - some negative terms get caught up"
- "I think I triggered the Juvenile Filter ■"
- Explanation: Shows repeated concern that Suno visibility filters are catching certain language/styles.

an_bau_duoi
- Idea: Acknowledges being timed out previously for using non-original lyrics and questions what counts as original.
- Stance: neutral
- Attitude: apologetic, uncertain
- Evidence:
- "I got timed out yesterday, sorry for not using original lyric, should not have mentioned that."
- "Would it still be an original lyric if I have some changes to it?"
- Explanation: This shows moderation enforcement around lyric originality.

.saffryn
- Idea: Says a prompt about “sensual funk music in a minor key” got flagged unexpectedly.
- Stance: critical
- Attitude: frustrated, incredulous
- Evidence:
- "just dont be trying to make sensual funk music in a minor key, i got flagged for that"
- "i was staring at the prompt wondering wtf i did in an instrumental to upset chatgpt"
- Explanation: This is a direct complaint that filtering caught something they thought was benign.

yandere7290
- Idea: Welcomes loosened censorship and argues people should decide what is acceptable rather than AI filters.
- Stance: critical of censorship / supportive of loosening
- Attitude: approving, opinionated
- Evidence:
- "did the devs fiddle with the censorship? its accepting stuff it wouldnt before, i like it alot"
- "i truly believe the people should decide what is or isnt ok instead of an AI that cant understand nuances"
- Explanation: This is a clear governance critique of automated censorship.

patsuno [Suno Team]
- Idea: Confirms censorship/filter behavior changed.
- Stance: neutral
- Attitude: direct
- Evidence:
- "yes"
- Explanation: This directly confirms a filter/censorship change in response to the user asking if devs “fiddled with the censorship.”

steicamel
- Idea: Questions how a specific song got filtered.
- Stance: critical
- Attitude: puzzled
- Evidence:
- "Still seems a bit sensitive, like how is this filtered?"
- Explanation: This reflects ongoing confusion over moderation criteria.

roszr
- Idea: Says a cat-themed song still did not get through, implying filter behavior is buggy or inconsistent.
- Stance: critical
- Attitude: frustrated
- Evidence:
- "my song about a cat didn't make it, the filter isn't even looking at the lyrics, just a bug or something"
- Explanation: This is a direct complaint about inconsistent filtering.

Suno Team Response

patsuno [Suno Team]
- Confirms censorship settings were adjusted.
- Evidence:
- "yes"
- Explanation: This directly answers the user asking whether censorship had been changed.

furrybeans [Suno Team]
- Warns that posting stealth-explicit NSFW songs in Discord will lead to moderation action.
- Evidence:
- "a 'stealth' NSFW song posted in this Discord to surprise our members with your explicitly graphic lyrics will get you 1 week time out"
- Explanation: This states an explicit moderation policy for the Discord community.

Additional Evidence (Optional)

"if the wording is changing, and non-sensical genre tags / style instructions 'sometimes' fly close to the sun"
Explanation: This supports the idea that users are actively trying to infer or work around moderation logic.

Topic: Copyright Theft / Reuploading of AI Songs by Others

Description

A direct legal/content-ownership conflict appears when a user says someone “stole and published” one of their songs. The discussion focuses on copyright, DistroLock, takedowns, and how to respond when AI-generated songs are re-uploaded by others. This is clearly a legal/platform issue concerning ownership enforcement and unauthorized use.

Timeline

- **2024-05-29 20:05:13 - 20:06:39 UTC**
- **2024-05-29 20:06:39 - 20:07:11 UTC**
- **2024-05-29 20:23:24 - 20:24:31 UTC**
- **2024-05-30 14:40:54 - 14:42:45 UTC**
- **2024-05-30 21:05:13 - 21:10:47 UTC**

Evolution:
- A user first asks how to prevent scammers from claiming Suno songs on YouTube.
- Others suggest services like DistroKid and Distrolock.
- Later, a user says one of their “best songs” was stolen and published by someone else.
- Discussion then turns to copyrightability, takedowns, and whether derivatives/extensions could get around fingerprinting.
- The issue remains unresolved in the logs, but practical defensive steps are discussed.

Key Participants

philipperuaudel
- Idea: Wants to know how to protect AI songs on YouTube from scammers or false claims.
- Stance: critical / concerned
- Attitude: anxious
- Evidence:
- "What we have to do to prevent future claims from scammers?"
- "I am a quite anxious regarding protecting our AI creations."
- Explanation: This directly frames the issue as protection from wrongful claims.

sushileafbeats
- Idea: Recommends using DistroKid and Distrolock to protect songs.
- Stance: supportive of protection measures
- Attitude: practical
- Evidence:

- "Register your music through a distributor like Distrokid and their Distrolock service."
- Explanation: This is specific advice on copyright/claim protection.

wetcircuit
- Idea: Reports their song was stolen and published, and that DistroLock became necessary.
- Stance: critical
- Attitude: upset, defensive
- Evidence:
- "someone stole and published one of my best songs."
- "DistroLock is now the first stop before I post here. .."
- "I can't even upload it. They registered it."
- Explanation: This is the clearest direct ownership conflict in the logs.

imolivercom
- Idea: Says they had the same thing happen and resolved it with a takedown email.
- Stance: supportive
- Attitude: practical
- Evidence:
- "happened to me too, i sent an email to legal@distrokid.com got taken down a few days later"
- Explanation: This confirms the issue is not isolated and provides a remedy.

graph1ks
- Idea: States that copyrighted lyrics are still protected and theft can still happen despite copyright.
- Stance: neutral
- Attitude: matter-of-fact, irritated
- Evidence:
- "my lyrics are VERY copyrightable. And copyright doesn't protect from stealing. DUH"
- Explanation: This underscores that legal rights do not prevent infringement from occurring.

Suno Team Response

No response from Suno team in the logs

Additional Evidence (Optional)

"you can submit songs for content IDs like any other store... and i havent had any issues with it yet"
Explanation: This supports that users are actively discussing platform-based rights enforcement tools around AI music publishing.
